Families at Risk: Background on families with multiple disadvantage

March 2007

Since 1997/8 families in the bottom fifth of the population have seen their incomes grow faster than those at the top

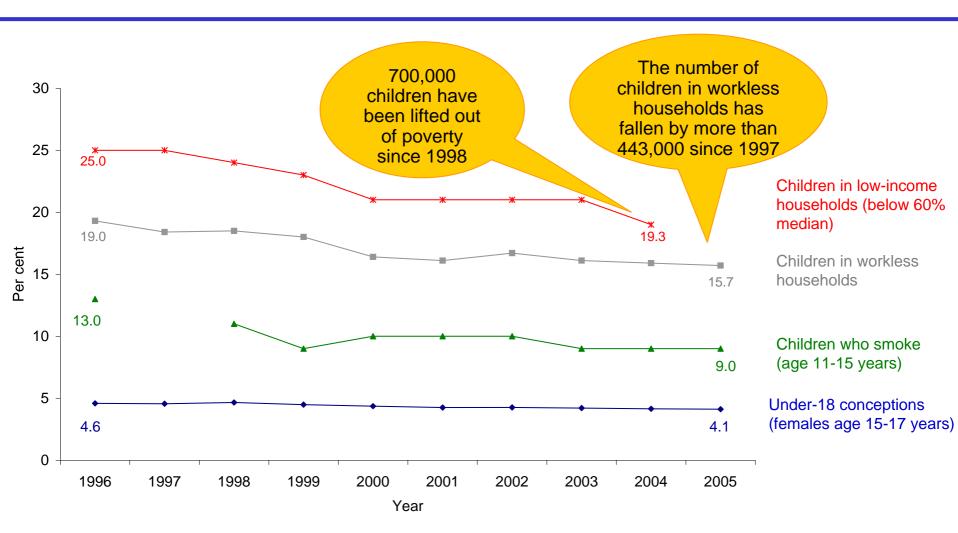

Source: DWP Households Below Average Income

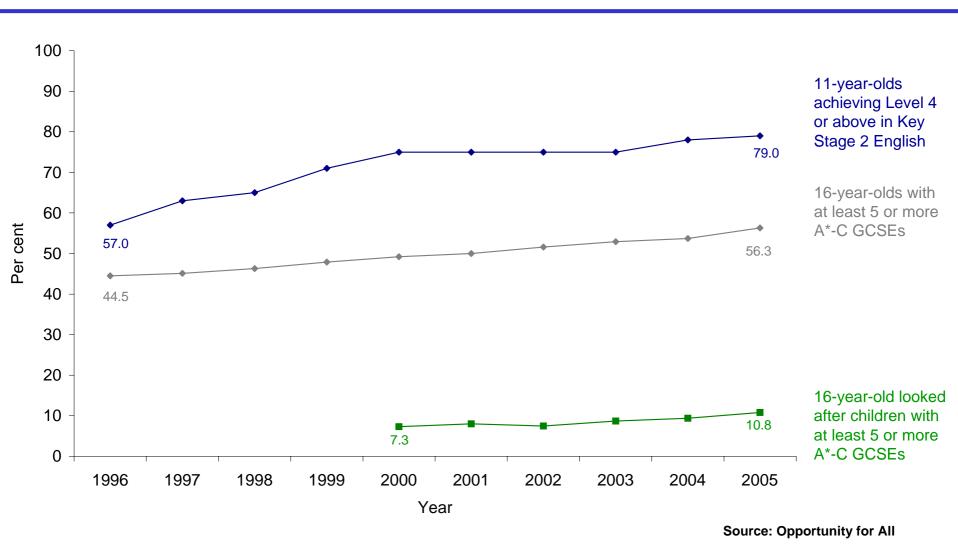

#### There has also been good progress in improving other outcomes for families with children

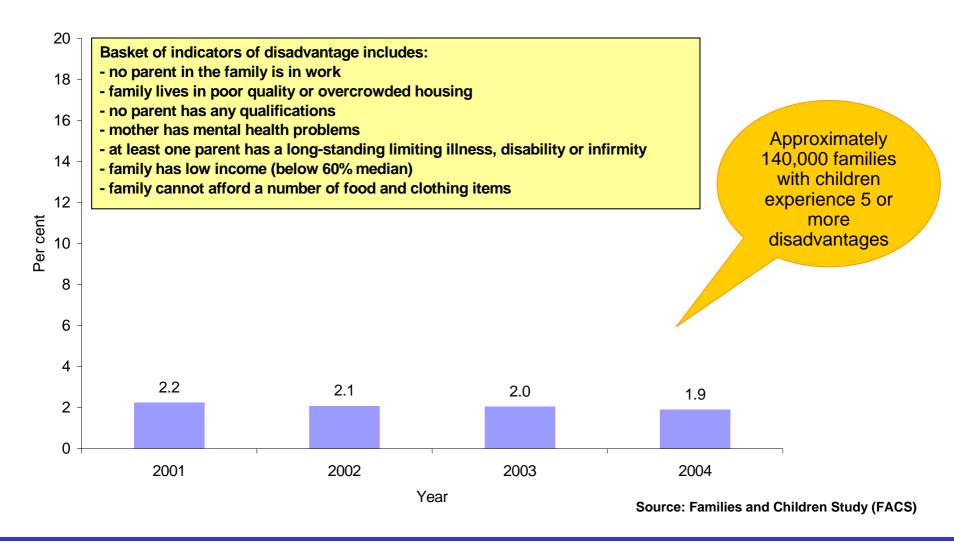

**Source: Opportunity for All** 

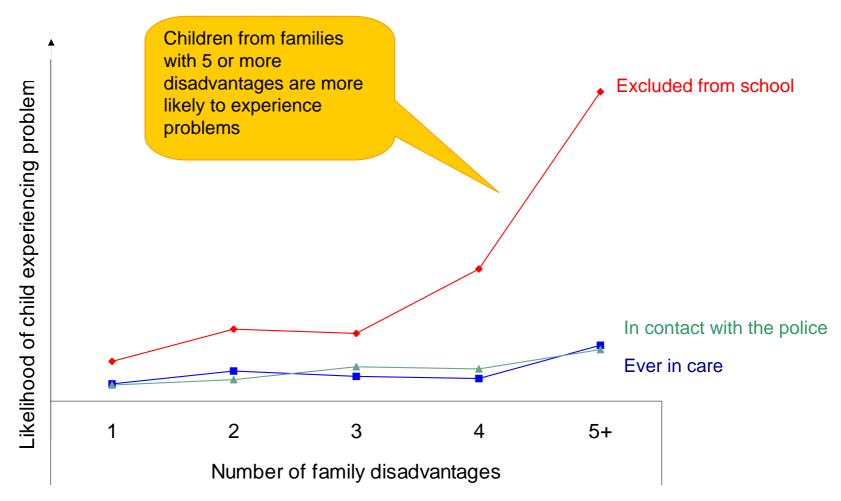

#### There have also been significant improvements in children's educational outcomes

## However, there are around 2% of families with children that experience 5 or more disadvantages

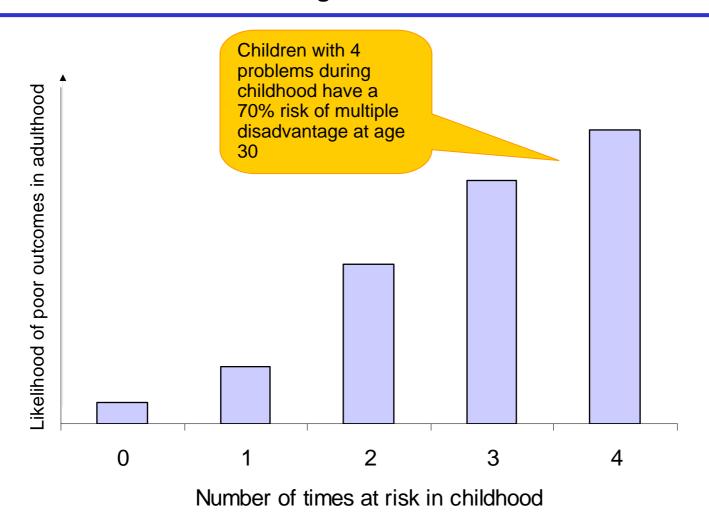

## Children who experience many family disadvantages are at most risk of social exclusion

Source: Extract from HMT/DfES *Policy Review of Children and Young People: A Discussion Paper*, based on commissioned analysis by Feinstein and Sabates (2006).

## Children who experience many family disadvantages during childhood are also at risk of social exclusion during adulthood

Source: HMT/DfES *Policy Review of Children and Young People: A Discussion Paper*, based on commissioned analysis by Feinstein (2006).

# There are significant costs to both the child and society of children living in families that experience disadvantage

#### Costs to child

Exposure to parent-based risk factors can be devastating for children's life chances:

- Children from the 5% most disadvantaged households are more than 100 times more likely to have multiple problems at age 30 than those from the top 50% of households
- 60% of boys whose fathers go to prison are eventually convicted themselves
- 61% of children in workless households live in poverty
- 60% of children in the lowest reading attainment group at age 10 had parents with low literacy scores
- Children who experience parental conflict and domestic violence are more likely to be delinquent and to commit violence and property offences

#### **Costs to society**

The negative consequences of exclusion inflict huge costs on the economy and society:

- Antisocial behaviour costs the public £3.4bn a year
- Annual cost of school exclusion is estimated at £406m.
- The additional costs of being not in education, employment or training at age 16-18 have been estimated at around £8.1 billion in terms of public finance costs
- We could save £300m over three years if care leavers had the same rates of going into education, employment and training as their peers
- If one in ten young offenders received effective early intervention it would save in excess of £100m a year

## The Social Exclusion Task Force will continue to investigate the complex issues surrounding the social exclusion of families with children

- The Social Exclusion Task Force has recently published a research report looking at strategies for measuring the most severe forms of social exclusion. See <a href="http://www.cabinetoffice.gov.uk/social\_exclusion\_task\_force/publications/research/multidimensional.asp">http://www.cabinetoffice.gov.uk/social\_exclusion\_task\_force/publications/research/multidimensional.asp</a>
- The next stage of this research programme is to undertake analytical work to investigate the circumstances of the most excluded families and what drives social exclusion for these families
- The SETF is leading a cross—Whitehall review on at-risk families that includes action to better integrate adult, child and community services around the needs of excluded families in order to tackle the drivers of deep seated exclusion
- You can contribute to the call for evidence by visiting the website: http://survey.cesi.org.uk/setf/MainPage.htm
