A National Statistics publication

Official statistics bearing the National Statistics logo are produced to high professional standards. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.

PARTICIPATION IN EDUCATION AND TRAINING BY YOUNG PEOPLE AGED 16 AND 17 IN EACH LOCAL AREA AND REGION, ENGLAND, 1994/95 TO 1998/99

Introduction

1 Figures on participation in education and training of 16 to 18 year olds in England are published annually in a Statistical First Release (SFR). The latest was SFR 28/2000 published in June 2000. The figures in the SFR are the definitive national figures. For differences between the SFR figures and those given here, see paragraph 68. The England totals in this bulletin should be used solely as a point of comparison for the local and regional participation rates.

2 The bulletin updates Statistical Bulletin 14/99, updating to 1998/99 the figures on participation in education by Local Education Authority (LEA) and in education and training by Learning Partnership (LP). The local area results are summarised by government office (GO) regions. The LEAs include the unitary authorities in existence on 1 April 1998.

3 The bulletin includes, for the first time, tables showing participation in education and training by local Learning and Skills Councils (local LSCs), which from April 2001 are responsible for the planning and funding of post-16 learning in England. Although the data are for 1997/98 and 1998/99, before the establishment of local LSCs, the data can be used as a baseline for future years.

4 Education covers pupils in maintained and independent schools in England, and all English domiciled full- and part-time students taking further education courses in institutions of further or higher education (other than independent further and higher education institutions). Students in adult education centres are excluded, as are the small numbers of 16 and 17 year olds in higher education.

5 The figures for education and training together include full-time education, Government Supported Training (GST) and part-time education outside GST. **This is a slightly different definition from that used in SFR 28/2000 which includes employer funded and other education and training outside publicly funded institutions.** A small number of GST participants are also in full-time education; these are included in both categories, but count only once in the total.

6 The data on school pupils, further education students and trainees are taken as a snapshot picture at a date near the end of the calendar year. For school pupils and trainees this is the following January, for students in further education (including sixth form colleges) in November, and for students in higher education institutions in December. Population

estimates by LP, LEA or local LSC area are for January. In all cases age is measured at the beginning of the academic year, 31 August.

7 Participation in education is only shown for Inner London as a whole in tables 4 and 8. Figures for individual Inner London boroughs cannot be estimated reliably because of the considerable numbers of pupils who attend schools in a borough other than the one in which they reside. This will also affect, to a lesser extent, the LPs and local LSC areas covering Inner London.

Summary

- a Participation in education and training of 16 year olds was 83 per cent in England in 1998/99. The rates differed little by GO region, only 3 percentage points between the highest and the lowest. For 17 year olds the rate was 74 per cent, with a 4 percentage point spread.
- b Participation by region in full-time education and GST separately showed greater variation for 16 and 17 year olds in 1998/99 than education and training together. Full-time education participation rates were generally higher in the South than in the North, with the reverse trend for participation in GST and part-time education outside GST.
- c For 16 and 17 year olds participation in education and training by region was in general higher for females than for males in 1998/99. Nationally for 16 year olds participation in education and training was 5 percentage points higher for females, 85 per cent compared with 80 per cent for males. National participation in education and training by 17 year olds was 4 percentage points higher for females than males, 76 per cent compared with 72 per cent. Participation by 16 year old females in full-time education was between 7 and 9 percentage points higher than males for all regions, except for the South East where females was 5 percentage points higher.
- d In 1998/99 participation in full-time education was 70 per cent in England for 16 year olds. The rates ranged from around 90 per cent to around 50 per cent by LP and by LEA, and from around 80 per cent to just under 60 per cent by local LSC area. Although nationally full-time participation remained unchanged in comparison with 1994/95 a few LEAs had an increase of 5 percentage points or more over the period, and a few a similar decrease.
- e For 17 year olds participation in full-time education was 57 per cent in England in 1998/99. The rates ranged between around 70 per cent and around 45 per cent by LP, around 75 and 45 per cent by LEA, and around 65 and 50 per cent for most local LSCs. In over half of LEAs full-time participation had changed by no more than 2 percentage points between 1994/95 and 1998/99.

Participation in education and training of 16 year olds by region and by sex, England, 1998/99 – Table 1

8 Table 1 shows participation by 16 year olds in full-time education by type of institution, in GST, in non-GST part-time education and in education and training combined in 1998/99. The rates are given by region for males and females separately and combined.

9 Nationally 83 per cent of 16 year olds participated in education and training in 1998/99. The majority, 70 per cent, were in full-time education. Less than half of the 16 year olds in full-time education remained at school, 28 per cent in maintained and 6 per cent in independent schools. Of the rest of those in full-time education, 9 per cent went on to a sixth form college and 26 per cent to 'other FE' colleges. A further 9 per cent of the age group were on GST schemes, and 5 per cent were in other part-time education outside GST.

10 Participation in education and training differed by only 3 percentage points by region, the highest being the South West at 84 per cent and the lowest the North East at 81 per cent. Participation in full-time education and GST on their own, however, showed much greater variation, with higher rates for education in the South and lower rates in the North. Participation in GST showed the reverse trend with rates higher in the North and lower in the South.

11 The highest participation rates in full-time education were 74 per cent in the East of England, the South East and London, and the lowest 61 per cent in the North East and 64 per cent in Yorkshire and the Humber. Participation in GST was highest in the North East at 14 per cent and Yorkshire and the Humber at 13 per cent. The southern regions had GST rates of less than 10 per cent, with London the lowest at 4 per cent.

12 The proportion of 16 year olds in full-time education who continued in school was higher in the South than in the North, while the opposite was true for the proportion going on to further education colleges. Participation in independent schools was highest in the South, with the South East at 10 per cent and the South West and London at 8 per cent. Rates in the North were lower, the North East the lowest at 3 per cent.

13 Participation rates in full-time education and in education and training were consistently higher for females than for males in each region. In full-time education, participation by 16 year old females was 73 per cent nationally, 7 percentage points higher than for males at 66 per cent. The difference was smaller, 5 percentage points for education and training, where the rate for females was 85 per cent and for males 80 per cent. This was mainly because males had higher participation rates in GST than females, 10 per cent compared with 8 per cent.

14 Female participation rates in full-time education were on average 4 percentage points higher than males in maintained schools, 30 per cent for females and 26

per cent for males. The difference in further education was smaller at 2 percentage points, 27 per cent for females and 25 per cent for males in further education colleges and 10 per cent for females and 8 per cent for males in sixth form colleges. The rates for independent schools were the same for both males and females at 6 per cent, as was participation in non-GST part-time education at 5 per cent.

15 The difference between male and female 16 year olds participation in full-time education was highest in the North East, the West Midlands and the South West, a difference of 9 percentage points, and lowest in the South East, a difference of 5 percentage points.

Participation in education and training of 16 year olds by local LSC area, England, 1997/98 and 1998/99 – Table 2, Chart 1 and Map 1

16 Table 2 shows participation in full-time education of 16 year olds by type of institution, in GST, in non-GST part-time education and in education and training combined by local LSC area in 1997/98 and 1998/99. Chart 1 shows the variation in education and training participation rates between local LSCs in 1998/99. Map 1 shows the 1998/99 education and training rates from table 2, with shading for four bands of the rates.

17 Referring to table 2; in 1998/99 participation in full-time education by local LSC area for 16 year olds ranged between around 80 per cent to just under 60 per cent. The local LSCs with the highest rates were in the south, Hertfordshire at 87 per cent and London South at 80 per cent. The lowest rates were found in the North and the Midlands, South Yorkshire at 58 per cent, and County Durham at 59 per cent. These compare with a national rate of 70 per cent.

18 About 20 per cent of local LSCs, mostly in the South, had participation in independent schools of 10 per cent or higher compared with 6 per cent nationally. Another fifth of local LSCs had no or few pupils in independent schools. The local LSCs with high rates in the schools sector of around 50 per cent of 16 year olds, had lower rates in further education, usually around 20 per cent, and similarly those local LSCs with low rates in the schools sector had higher rates in further education. The local LSCs with the highest participation rates in sixth form colleges were Hants/Isle of Wight/Portsmouth/Southampton at 27 per cent, Tees Valley at 23 per cent and Greater Manchester at 22 per cent.

19 Participation in GST ranged from around 16 per cent in some local LSCs in the North to less than 5 per cent in the South, with a couple of exceptions, Cheshire/Warrington in the North West with a rate of 9 per cent, and Somerset in the South West with 10 per cent.

20 Referring to map 1; participation in education and training combined was more uniform throughout the country than full-time education and GST on their own,

as local LSCs in the North with low rates in full-time education had high rates in GST and in other part-time education. The rates in education and training ranged from around 90 per cent to just below 80 per cent by local LSC area.

21 In comparison with 1997/98, participation in education and training in 1998/99 by 16 year olds either remained the same, or changed by 1 percentage point for about 40 per cent of the local LSCs. The largest decrease in participation of 6 percentage points from 84 per cent in 1997/98 to 78 per cent in 1998/99 was experienced by London Central. The largest increases in participation were experienced by Lancashire, a climb from 81 per cent to 84 per cent, and Gloucestershire a climb from 83 per cent to 86 per cent.

22 Participation rates for full-time education, GST and other part-time education also remained the same for most of the local LSCs in comparison with 1997/98. The largest year on year change in independent schools was experienced by Lincolnshire with an increase in participation of 7 percentage points.

23 Nationally the full-time participation rates by institution type and other part-time education remained the same in 1998/99. GST decreased by 1 percentage point resulting in a decrease of 1 percentage point in total education and training, from 84 per cent in 1997/98 to 83 per cent in 1998/99.

Participation in education and training of 16 year olds by LP area, 1998/99 – Table 3

24 Table 3 shows participation in full-time education of 16 year olds by type of institution, in GST, in non-GST part-time education and in education and training combined by LP in 1998/99.

25 Participation in full-time education ranged between around 80 per cent and around 55 per cent for most LP areas. The LPs with the highest rates were in the south with Bath and North East Somerset in the South West at 90 per cent, and the lowest were found in the North, Knowsley in the North West at 50 per cent. A few exceptions were Sefton in the North West at 78 per cent, York in Yorkshire and the Humber at 76 per cent, and Milton Keynes in the South East with a rate of 60 per cent.

26 The LPs with the highest GST participation rates were in the North, St Helens in the North West at 20 per cent, and Sheffield in Yorkshire and the Humber at 19 per cent. The lowest rates were in the south with Surrey, Royal Windsor/Maidenhead and West London at 3 per cent.

27 Participation in non-GST part-time education on the whole followed the same pattern as GST with higher rates in the North than in the South. However, the pattern was more uniform with most rates ranging between 10 and 4 per cent.

Participation in education of 16 year olds by LEA, England, 1994/95 to 1998/99 – Table 4, Chart 2 and Map 2

28 Table 4 shows the variation in participation in full- and part-time education for 16 year olds by LEA from 1994/95 to 1998/99. Chart 2 shows the variation in full-time education participation rates between LEAs in 1998/99. Map 2 shows the 1998/99 full-time education participation rates from table 4, with shading for six bands of the rates.

29 Table 4 shows that the national participation rate in 1998/99 for 16 year olds was 70 per cent for full-time and 7 per cent for part-time education. Full-time participation stayed at the same level from 1994/95 to 1998/99. Part-time participation fell by 2 percentage points from 9 per cent in 1994/95 to 7 per cent in 1995/96 but has remained steady ever since. A few LEAs saw an increase in full-time participation of 5 percentage points or more between 1994/95 and 1998/99, the highest being Gateshead which had an increase of 10 percentage points from 52 to 62 per cent in 1998/99. For around 40 per cent of LEAs the rate changed by less than 2 percentage points from 1994/95 to 1998/99.

30 Compared with 1997/98 in about half of the LEAs full- and part-time participation stayed the same or changed by 1 percentage point.

31 Participation in full-time education of 16 year olds in 1998/99 ranged from around 90 per cent to around 50 per cent by LEA. The highest rate, 95 per cent, was held by Kingston upon Thames in Outer London, closely followed by Redbridge at 94 per cent, the lowest being Salford in the North West with 46 per cent. Map 2 shows that in general the higher rates were in the South and the lower in the North and the Midlands.

32 Participation in part-time education ranged between 13 to around 4 per cent for most LEAs. The higher rates were found in the North and Midlands in LEAs with full-time participation rates lower than average, while the South had the lower part-time participation rates.

Map 2: Participation in full-time education of 16 year olds by Local Education Authority, England, 1998/99

Participation in education and training of 17 year olds by region and by sex, England, 1998/99 – Table 5

33 Table 5 shows participation by 17 year olds in full-time education by type of institution, in GST, in non-GST part-time education and in education and training combined in 1998/99. The rates are given by region for males and females separately and together.

34 Nationally 74 per cent of 17 year olds participated in education and training in 1998/99. The majority of these, 57 per cent of the age group, were in full-time education, 30 per cent in sixth form and other FE colleges and 27 per cent in school. A further 11 per cent were on GST schemes and 6 per cent were in other part-time education.

35 As for 16 year olds, participation in education and training varied little between regions in 1998/99. Participation was highest in the South West with 76 per cent, and five regions shared a rate of 74 per cent, the North West, Yorkshire and the Humber, East and West Midlands and the South East. London had the lowest rate of 72 per cent. Participation in full-time education and GST showed the same pattern as for 16 year olds – higher rates in full-time education in the South and in GST in the North. The South East had the highest rate of 62 per cent in full-time education, with London at 61 per cent, and the lowest rates were in the North East with 49 per cent and Yorkshire and the Humber with 51 per cent.

36 For participation by males and females in education and training the rates were closer than for 16 year olds, 72 per cent for males and 76 per cent for females. The full-time education participation rate for females nationally was 61 per cent, 7 percentage points higher than for males at 54 per cent. The South West had the largest difference, 9 percentage points, in full-time education with rates of 55 per cent for males and 64 for females. To some degree this was balanced by a 4 per cent difference in GST participation, 14 per cent for males and 10 for females.

37 The regions with the largest differences in participation in education and training were the North East, the West Midlands, London and the South West all with female rates 5 percentage points higher than for males. This was because of the higher rates of female participation in full-time education – for example in the South West, 64 per cent compared with 55 per cent for males. Participation in GST was the same in London, 6 per cent for both males and females, whereas participation rates for females in the North East, North West and Yorkshire and the Humber were 5 percentage points lower than for males. Part-time education rates for males and females were the same in London and the North West at 5 and 7 per cent respectively. These compare nationally with 6 per cent for both males and females.

Participation in education and training of 17 year olds by local LSC area, England, 1997/98 and 1998/99 - Table 6, Chart 3 and Map 3

38 Table 6 shows participation in full-time education of 17 year olds by type of institution, in GST, in non-GST part-time education and in education and training combined by local LSC area in 1997/98 and 1998/99. Chart 3 shows the variation in education and training participation rates between local LSCs in 1998/99. Map 3 shows the 1998/99 education and training rates from table 6, with shading for four bands of the rates.

39 Table 6 shows that in 1998/99 the participation in full-time education by local LSC area for 17 year olds ranged between around 65 per cent to just under 50 per cent. The local LSCs with the highest rates were in the South, Hertfordshire at 71 per cent and London South at 68 per cent. The lowest rates were found in the North and the Midlands with Tyne and Wear at 46 per cent and South Yorkshire and the Black Country at 48 per cent. These compare with a national rate of 57 per cent.

40 Participation in GST ranged from around 20 per cent in some local LSCs in the North to less than 5 per cent in the South. The lowest was in Surrey with a rate of 3 per cent. However, the difference between North and South was less marked than for 16 year olds.

41 Looking at map 3, as for 16 year olds, participation by 17 year olds in education and training combined was more uniform throughout the country than full-time education and GST on their own. Local LSCs in the North with low rates in full-time education had high rates in GST and in other part-time education. The rates in education and training ranged from around 80 per cent to just below 70 per cent; The highest was Cumbria at 88 per cent and the lowest in London East and Essex, both at 67 per cent.

42 In comparison with 1997/98, participation in education and training in 1998/99 by 17 year olds remained the same, or changed by 1 percentage point, for most of the local LSCs. Nationally, the participation rates for 17 year olds by full-time education, GST and other part-time education remained the same in 1998/99.

Participation in education and training of 17 year olds by LP area, 1998/99 – Table 7

43 Table 7 shows participation in full-time education of 17 year olds by type of institution, in GST, in non-GST part-time education and in education and training combined by LP in 1998/99.

44 Participation in full-time education ranged between around 70 per cent and around 45 per cent for most LP areas. Participation in full-time education was generally higher in the South and lower in the North. As for 16 year olds the LP with the highest rate was Bath and North East Somerset in the South West at 78 per cent, and the lowest was Knowsley in the North West, at 37 per cent.

45 The LPs with the highest GST participation rates were in the North, Sunderland at 23 per cent, and Cumbria, Barnsley and Hull at 22 per cent. The lowest rates were in the South with Surrey at 3 per cent and West London at 4 per cent. A few exceptions were Plymouth in the South West at 17 per cent, Medway in the South East at 16 per cent and York and North Yorkshire at 8 and 9 per cent respectively.

46 Participation in non-GST part-time education on the whole followed the same pattern to that of 16 year olds with the higher rates in the North and lower in the South, ranging from around 10 to around 4 per cent for most LPs.

Participation in education of 17 year olds by LEA, England, 1994/95 to 1998/99 – Table 8, Chart 4 and Map 4

47 Table 8 shows the variation in participation in full- and part-time education of 17 year olds by LEA from 1994/95 to 1998/99. Chart 4 shows the variation in full-time education participation rates between regions from 1994/95 to 1998/99. Map 4 shows the 1998/99 full-time education participation rates from table 8, with shading for six bands of the rates.

48 Table 8 shows that in 1998/99 the participation rate for 17 year olds was 57 per cent for full-time and 8 per cent for part-time education in England. Full-time education was at the same rate as in 1994/95 whereas part-time education had fallen 2 percentage points from 10 per cent. In over 40 per cent of LEAs full-time participation had changed by no more than 2 percentage points between 1994/95 and 1998/99. The LEA with the highest increase was Redbridge, from 68 per cent in 1994/95 to 77 per cent in 1998/99. There were also a handful of LEAs where full-time participation had fallen by 5 percentage points or more over the period. For just over 70 per cent of LEAs part-time education rates either remained the same or change by no more than 2 per cent between 1994/95 to 1998/99.

49 Compared with 1997/98 about half of LEAs had little change in their full-time education participation rates in 1998/99 but there were a small number with increases or decreases of around 5 percentage points. Part-time participation remained at the same level in most LEAs compared with the previous year. North Yorkshire experienced the largest increase of 6 percentage points from 11 to 17 per cent. Havering experienced the largest decrease of 6 percentage points from 12 to 6 per cent, although this was partly balanced by an increase of 3 percentage points in full-time education.

50 The LEAs with the highest participation in full-time education of 17 year olds in 1998/99 were Rutland at 84 per cent and Kingston upon Thames with 80 per cent followed by Bath and North East Somerset with a rate of 78 per cent. From map 4, most of the LEAs with above average participation rates were in the South and the lower participation rates were found in the Midlands and the North, with Salford the lowest at 36 per cent followed by Knowsley at 37 per cent. Milton Keynes in the South East and Thurrock in the East of England were two exceptions both with rates of 45 per cent.

51 Participation in part-time education ranged between around 6 and around 12 per cent for most LEAs. The LEAs with higher rates were in general found in the North and Midlands in LEAs with full-time participation rates lower than average, while the lower part-time participation rates were in the South.

Map 4: Participation in full-time education of 17 year olds by Local Education Authority, England, 1998/99

NOTES AND METHODOLOGY

Definitions

52 The Learning and Skills Act 2000 creates the new Learning and Skills Council (LSC), bringing together for the first time into a single national body, responsibility for planning and funding of post-16 learning (other than Higher Education) in England. It will also be the leading agent of change in realising the Government's objectives for a learning society in England. The local LSCs will be responsible for ensuring that the needs of local communities, businesses and individuals are reflected and met through LSC-funded provision, and for delivering the national priorities and policies at local level. The LSC will become fully operational from April 2001.

53 (Local) Learning Partnerships were established during 1999 to improve coherence and collaboration in the planning and delivery of post-16/lifelong learning. They all have numerical targets linked to the National Learning Targets and are co-ordinating local action to meet those targets. They are involved in a whole range of activities designed to widen participation, improve standards and increase attainment in their local areas. From April 2001 they will work closely with local LSCs providing local information and feedback on provision and need for the local LSC planning processes and agreeing the action needed to progress towards the targets.

54 The LEAs for 1998/99 include the new unitary authorities that were created on or before 1 April 1998.

55 Local LSCs have the same boundaries as single LPs or groups of LPs. Most LPs cover areas with the same boundaries as single LEAs or groups of LEAs while a small number of LPs cover areas smaller than an LEA. Participation rates for LPs, LEAs and local LSC areas with similar names are not necessarily the same because the geographical areas covered may not be identical. For instance South Essex LP area covers the whole of Southend LEA as well as a small part of Essex LEA. For a small number of areas where data were unavailable by LP, namely Greater and North Nottinghamshire and East and West Lancashire, data by TEC area were used.

56 The numerators for participation in education and training by LP and local LSC area are the sum of the four elements as follows:

- a** the number of pupils in maintained, special and independent schools *attending* schools in the LP or local LSC area;
- b** the number of full-time further education students *resident* in the LP or local LSC area wherever studying;

c the number of young people on GST, according to the LP where they are *resident* or the local LSC area with which their training is *contracted*;

d the number of students on part-time further education courses, who are not on GST, *resident* in the LP or local LSC area wherever studying. These will include students supported by an employer or doing personal study.

57 The numerators for participation in education by LEA are the sum of:

- a** the number of pupils in maintained, special and independent schools *attending* schools in that LEA;
- b** the number of full- or part-time further education students *resident* in that LEA wherever studying.

58 The denominators are estimates of the resident population in each LP, LEA or local LSC area in January of each year. The breakdown into academic years of age is calculated from mid-year estimates provided by the Office for National Statistics.

Sources for data on school pupils

59 The Schools' Census provides data on school pupils in January of each year. School pupils are treated as if they live in the LP/LEA/local LSC area in which their school is situated. This will lead to inaccuracies in participation rates by residence to some degree, as some pupils attend schools outside their LP/LEA/local LSC area. The calculated rates will overstate participation in some LP/LEA/local LSC areas and understate it in others.

60 An earlier Bulletin (7/95) reported the amendments made to LEA participation rates in 1994/95 from a special exercise in which state school pupils were analysed by LEA of residence. For most authorities outside Greater London the adjustments were small; within Greater London the adjustment was within 3 percentage points for about two thirds of the authorities. Data for this adjustment are not available for later years, nor for independent schools for any year.

Sources for data on further education students

61 The Further Education Funding Council's Individualised Student Record (ISR) was set up in 1994/95, and has provided data on students in FE sector colleges since then. Snapshot data as at 1 November have been used.

62 Sixth form colleges were part of the schools sector until 1992/93 when they transferred to the further education sector.

63 In the ISR the LP/LEA/local LSC area has been identified using the postcode of students' home

addresses. For the students whose postcodes are missing the LP/LEA/local LSC area of institution has been used instead. This applies to about two per cent for the ISR in 1998/99.

64 From 1994/95 students on further education courses in institutions of higher education are included from data supplied by the Higher Education Statistics Agency (HESA). Data on their area of residence are incomplete for students in higher education institutions, so the area of the institution has been used instead.

Sources for data on GST

65 TEC delivered GST consists of young people on Advanced Modern Apprenticeships, Foundation Modern Apprenticeships, Other Training for Young People and Work Based Learning for Adults. The Regional and Head Office Management Information (RHOMIS) Database provides numbers participating at the end of the calendar year; proportions by age are estimated using the breakdown of trainees recorded on the Trainee Databases. Information on GST is published in quarterly Statistical First Releases.

66 The figures used here are estimates based on incomplete data with some TEC areas affected more than others. The LP of trainees has been established using the trainees' home address. In the 2% per cent of cases with an incomplete address, trainees have been proportionately allocated to an LP in the region in which their TEC is based. Some of the trainees are also in full-time education; the overlap estimated from the ISR has been deducted from the total figures in the education and training totals.

Sources for population data

67 The population estimates for academic year ages are derived from mid-year estimates and projections provided by the Office for National Statistics and the Government Actuary's Department. At local level, for individual ages, such estimates are subject to some uncertainty. This is particularly the case in small areas, where the margin of error surrounding a population estimate can be disproportionately high. Users should bear this in mind when making comparisons, for example year-on-year within a small area or between one small area and another.

Comparisons with other participation data

68 Participation of young people not in education and training are published annually in a Statistical First Release. The latest was SFR 28/2000 'Participation in education, training and employment by 16-18 year olds, England: 1998 and 1999'. Participation rates may not coincide exactly with the SFR due to the use of the most recent ISR data and population estimates here, and to the exclusion of 16 and 17 year olds in higher education, and of those in further education not resident in an English LEA. The latest SFR gives national figures for a more recent year, end 1999, than this bulletin.

69 Another source of local participation rates is the annual survey by Careers Service area, although this has different definitions from those used here. The survey covers activities of young people in the autumn following completion of Year 11 in all maintained, and some independent, schools. From Autumn 1999, the survey also covers all 17 year olds, to cover the same two cohorts as this statistical bulletin. It is estimated that the 1998 survey covered about 92 per cent of 16 year olds. The results of the survey were published as 'Moving On 1998- Pathways Taken by Young People Beyond 16', available from DfEE Publications, PO Box, Sherwood Park, Annesley, Nottingham, NG15 0DG, Tel: 0845 6022260, quoting MO98. Data for 1999/2000 are available as Moving On 1999, from the same source, quoting MO99.

Further information

70 All bulletin tables, along with an additional table showing participation by local LSC area for 16 and 17 year olds combined, are available on the DfEE website: www.dfee.gov.uk/statistics
