

Skills Funding  
Agency

# FE Choices Learner Satisfaction Survey 2012/13

Technical Report Version 1

This report was undertaken by Ipsos MORI on behalf of the Skills Funding Agency

December 2013

Of interest to colleges, training organisations and the general public interested in the research, analysis and calculation phases of the 2012/13 Learner Satisfaction Survey

# Ipsos MORI

**Ipsos MORI**, part of the Ipsos Group, is a leading research company with global reach.

**Ipsos MORI Social Research** is a team of methodological and public policy experts based in London, Edinburgh, Belfast and Manchester. We bridge the gap between government and the public, providing robust research and analysis to help determine what works. We cover broad issues that shape the delivery of public services in modern society and how to engage the public in the policy-making process.

To find out more about the work of Ipsos MORI, telephone 020 7347 3000  
or visit [www.ipsos-mori.com](http://www.ipsos-mori.com).

**RCU** is a specialist educational market research company working with clients all over the UK. Our mission is to develop practical and relevant research and consultancy solutions for clients through innovation, professionalism and market expertise.

**RCU** provides customised market research, consultancy, publications and seminars for a wide range of public and private sector clients and has been serving the learning and skills sector since 1987.

To find out more about the work of **RCU**, telephone 01772 885999,  
e-mail [enquiries@rcu.co.uk](mailto:enquiries@rcu.co.uk) or visit [www.rcu.co.uk](http://www.rcu.co.uk).

## Reference

'Provider' or 'Providers' are terms used to refer to 'Colleges and Training Organisations'.

## 1. Introduction

### Purpose of this Report

1.1 The purpose of this report is to give the Skills Funding Agency, BIS, DfE and other interested parties detailed descriptions, analysis and explanations of all phases of the research, analysis and calculation stages of the 2012/13 Learner Satisfaction survey.

1.2 It is intended that this report should enable the Agency and others to replicate precisely the approach adopted. As a result it contains necessarily technical information but, wherever possible, this is accompanied by explanations that will assist non-specialist readers.

## 2. Methodology

### Overview of the survey

2.1 The main survey mechanism was an online survey, available 24 hours a day, accessible by learners from 12 November 2012 to 31 May 2013 using a link to a dedicated survey page. Colleges and training organisations could either distribute the link separately or embed it in their intranets, with the latter offering them the option of posting an accompanying link to internal surveys. Guidance on how to do this was contained in the provider guidance notes posted by the Skills Funding Agency on the FE Choices Information pages.

2.2 In order to complete a survey learners needed their provider code (UKPRN number) and individual learner number (L03 field of the Individualised Learner Record or ILR) or Unique Learner Number (ULN). Both Learner Reference numbers and ULNs were accepted this year. It is understood that Learner Reference numbers are being phased out with ULNs becoming the universal method of learner identification. The UKPRN was validated in real-time using an online database and respondents were only able to continue with the survey if they input a valid UKPRN. However UKPRNs are issued consecutively, meaning that learners mistyping the number could easily submit a valid but incorrect identifier. This potential error was detected and corrected for during the validation phase using ILR details (see Section 5).

2.3 As full learner records are submitted by colleges and training organisations retrospectively, learner codes cannot be subjected to real-time validation. Learners were therefore asked to provide personal details that were later matched into the ILR during the extensive post-survey validation and checking phase (see Section 5).

2.4 Colleges and training organisations with learners for whom it was impossible to complete online surveys, for example those based in locations where there was no internet access, were able to apply to use paper questionnaires. These were provided as a printable template with embedded, scannable, provider codes. Colleges and training organisations applied to use this approach via the FE Choices Information pages on the Agency's website or via the Provider Extranet (deadline 16 November 2012). The closure date for the paper survey was set at 1 May 2013 to allow for the longer processing period required for paper surveys.

2.5 The survey contained nine core questions and an option for further questions on specific learning aims. The additional option was not practical for paper-based surveys and was therefore not offered.

2.6 Learners completing the survey online were invited to select the environment in which they learnt from:

- learning at a college;
- learning programmes, such as Apprenticeships; and
- training programmes for employees being trained in their work place.
- On a Learndirect (online) course.

## Further Education Public Information 2012/13 - Learner Satisfaction

The questionnaires had an identical structure but related to four different learning environments and used language that would be understood by those learners in each different environment.

Similarly colleges and training organisations of those learners completing the paper-based survey were asked to decide which version or versions of the questionnaire were most appropriate for their learners.

Three versions of the paper questionnaire template in pdf format were sent to staff co-ordinating the paper surveys. These co-ordinators were invited to select the most appropriate version for their learners.

### The questionnaire

2.6 The survey questionnaire was unchanged from the one used for the 2011/12 Learner Satisfaction Survey, retaining the 0-10 rating scale with bipolar labels only (very bad and very good) first introduced last year.

2.7 Learners completing the online questionnaire were also given the opportunity to comment on their satisfaction at course level (learning aims). Three core questions (quality of teaching, degree of respect and overall satisfaction) from the main survey were repeated for each learning aim taken.

2.8 All versions of the survey contained clear data protection statements developed as a result of long-term dialogue with the LSC/Skills Funding Agency legal team (These are evident in the explanatory copy at the start of the survey. (Please see Annex 7 for details). Legal and ethical issues are discussed further in Section 6.

### Technical aspects of the online survey

2.9 Technical issues relating to completion of questionnaires online were tested extensively during the 2007/08 Framework for Excellence pilot and the subsequent 2007/08 (Version 1) and 2008/09 (Version 2) surveys. Specifically, 2008/09 technical testing on providers' premises included:

- testing the survey web link and questionnaire accessibility from different provider locations and checking successful transmission to Ipsos MORI's survey analysis system;
- testing the in-built validation checks and checking arrangements to ensure that learners could enter provider codes and individual learner numbers;
- matching learner details from test submissions using dummy learner numbers and provider codes;
- monitoring the live online survey navigation and completion process;
- discussing, where applicable, the testing of the questionnaire from multiple sites and/or remote access to the survey for off-site learners;

## Further Education Public Information 2012/13 - Learner Satisfaction

- testing user navigation through the survey and any technical issues relating to this; and
- testing completion of the questionnaire using different input devices and screen resolutions including Desktop PCs, Laptop PCs and BlackBerrys.

2.10 The testing process confirmed the full technical functionality of the survey and the ability of learners to transmit responses from a wide range of devices in a range of settings. Further testing took place in September 2009 of the ability of providers to run links to the survey alongside their own internal surveys. This linking approach was governed by a set of guidelines republished as part of the 2012/13 Learner Satisfaction Provider Guidance Notes. (These can be found in Annex 8).

### Technical aspects of the paper survey

2.11 A paper-based survey was available for those learners for whom it would be impossible to complete a web-based survey. This option was only available with the prior agreement of the FE Choices team and completed applications had to be received by the Skills Funding Agency by 16 November 2012.

2.12 Three versions of the paper questionnaire template in PDF format were sent to staff co-ordinating the paper surveys. As mentioned earlier, providers were asked to decide which version or versions of the questionnaire were most appropriate for their learners. Survey co-ordinators were also sent a set of guidelines on how to reproduce the questionnaires and conduct the survey with learners.

2.13 All three versions were designed to be printed in landscape format on A3 double-sided paper to ensure compliance with minimum type size guidelines. RCU staff liaised directly with survey co-ordinators in colleges and providers using paper questionnaires and made arrangements for the completed surveys to be collated in to sealed envelopes and collected by courier to ensure there was no risk of them going astray.

### Provider communication

#### *Extranet guidance and daily updates*

2.14 A letter was sent by the Skills Funding Agency to the Principals/Chief Executives of all providers in October 2012. This set out the details of the 2012/13 survey and included a reminder of the provider's UKPRN number and personalised password (new providers were supplied with a password for the first time). This information allowed each in-scope provider to access a specially-designed extranet site (Provider Extranet) containing survey information specific to their organisation. The site was hosted by Ipsos MORI and included updates for both the Learner Satisfaction and Employer Satisfaction surveys.

2.15 For the Learner Satisfaction survey the Provider Extranet also hosted guidance to help providers meet their minimum sample requirements; this included a Sample Size Calculator for providers to work out the overall minimum target for responses to the survey.

2.16 The Provider Extranet also included an information sheet in Excel which contained daily response rate information. The sheet was updated at the start of each day and told providers how many of their learners had successfully submitted survey responses by the

## Further Education Public Information 2012/13 - Learner Satisfaction

end of the previous day. This response rate report also recorded the breakdown of responses between the sixteen learner sub-groups, which are detailed in paragraph 4.11. This level of detail was provided to help providers monitor the representativeness of their sample.

### *Technical and policy-related assistance*

2.17 Colleges and training organisations had four main routes they could follow to gain assistance during the survey:

1. The first port of call was the provider's local Skills Funding Agency area team/relationship manager who had the option of e-mailing the Agency's internal support system through the Data Service.
2. Contacting the Data Service at the Skills Funding Agency directly via the Data Service Support Desk
3. Visiting the Contact Us website page for the Learner Satisfaction and Employer Satisfaction surveys (<http://fechoices.ipsos-mori.com/contactus>).
4. FE Choices Information pages on the Agency's website.

2.18 The Contact Us website page was part of the Provider Extranet but could be accessed by both Providers and Learners without the need for login details. Visitors were presented with answers to a series of Frequently Asked Questions and were able to submit a query to Ipsos MORI if they required further information; any queries relating to policy issues were then forwarded on to the Data Service for a direct response from the Skills Funding Agency. It is not possible to present figures for the number of people who accessed the site, but as in 2012 the success of the system can be seen from a reduction in the number of queries submitted to the dedicated Ipsos MORI email address ([learnerviewssurvey@ipsos-mori.com](mailto:learnerviewssurvey@ipsos-mori.com)) compared to previous years. The mailbox for this address was staffed during office hours by several Ipsos MORI staff.

2.19 Where providers or learners submitted queries relating to policy or survey results, these were forwarded onto the Service Desk at [servicedesk@thedata-service.org.uk](mailto:servicedesk@thedata-service.org.uk) and answered by the Skills Funding Agency as appropriate. In total 18 queries were forwarded to the Skills Funding Agency, ranging from questions about eligible providers and learners, postal surveys, survey timescales, analysis, response rate methodology and learner identification.

2.20 In addition, there were 332 queries from providers to Ipsos MORI. The two most common types of queries were request for a new password to the Provider Extranet and questions about the daily response rate reports.

2.21 The Provider Extranet also presented providers with the opportunity to register their contact details to receive updates on issues relating to the FE Choices surveys. A total of 1,080 members of staff from 684 providers entered their details.

## Further Education Public Information 2012/13 - Learner Satisfaction

### Technical operation of the online survey

#### *Testing the on-screen survey*

2.22 The on-screen survey was made available to providers for testing between 3<sup>rd</sup> and 10th November 2012. During this window providers were able to test accessibility, functionality and compatibility of the on-screen survey with their own IT infrastructure. Providers were able to fully simulate the respondent experience and were allowed to submit responses containing 'dummy data'. This data was then wiped from the response database before the survey went live at noon on 12th November 2012. There were 268 test records attempted during the testing phase.

#### *Delivering the on-screen survey*

2.23 The on-screen survey was available for twenty-four hours of the day, every day of the week between noon on 12 November 2012 and midnight on 31 May 2013. In addition to the main on-screen survey, a 'British Sign Language' (BSL) version of the survey was developed for 2012/13 for learners with literacy difficulties, learning difficulties or visual impairments (see section 7).

2.24 There were no reported technical difficulties with the on-screen surveys. The following table shows the number of visits to the main survey and the BSL version of the main survey during the survey window. In total there were 605,449 visits to the survey websites and 363,302 of these visits (60%) resulted in a successful submission of a survey response. The remaining 242,147 (40%) of the visits are classed as incomplete response, which accounts for all occasions where the website was visited but no final response submitted. However, on the vast majority of these occasions (77%), respondents did not progress to the log in stage of the survey. This suggests that some visitors had no intention of submitting a response.

2.25 A further 7% (15,818) of incomplete responses were failed attempts to log-in to the survey (a process that required the provider UKPRN number and their own learner reference number). This could indicate that some learners were trying to start the survey without the necessary information. It is likely that most of these learners subsequently returned to the site and made successful responses. The final 17% of the incomplete responses were from learners who successfully logged-in but did not complete the survey. These incomplete responses could have resulted from learners opting out of the survey, losing their internet connection while completing the survey or failing to select "submit" at the end of the process.

	<b>Main LS survey</b>	<b>BSL survey</b>	<b>Total</b>
<b>Total Visits</b>	<b>603,536</b>	<b>1,913</b>	<b>605,449</b>
Complete responses (pre-validation)	<b>363,098</b>	<b>204</b>	<b>363,302</b>
Incomplete responses	<b>240,438</b>	<b>1,709</b>	<b>242,147</b>
Did not visit log-in screen	184,708	1,573	186,281
Failed log-in	15,733	85	15,818
Successful log-in but incomplete response	39,997	51	40,048

## Further Education Public Information 2012/13 - Learner Satisfaction

2.26 As shown in the table below, two thirds of responses were submitted between March and May whilst only 6.6% were submitted prior to Christmas. This pattern is similar to the previous year of the survey.

Month	Number of responses	% total	Cumulative %
November 2012	9,127	2.5	2.5
December 2012	14,838	4.1	6.6
January 2013	40,264	11.1	17.7
February 2013	50,873	14.0	31.7
March 2013	83,970	23.1	54.8
April 2013	68,374	18.8	73.7
May 2013	95,652	26.3	100.0
<b>Total</b>	<b>363,098</b>	<b>100.0</b>	

Source: Learner Satisfaction Survey Data

### *Data storage and file transfer*

2.27 The raw survey data was stored securely through the Dimensions (IBM SPSS Data Collection) research software.

2.28 The SQL server in Dimensions is only available through the Interviewer Server Administration portal and this greatly increases security. Any code within surveys is contained on the server side so is not susceptible to common attacks such as SQL injection attack vectors. Access to the Interviewer Server portal is password controlled. Only staff that are assigned to the project have access to the password.

2.29 The survey database was hosted with Rackspace which has the following security measures:

- strictly monitored access to all data centres using keycard protocols, biometric scanning protocols and continuous interior and exterior surveillance;
- access limited to data centre personnel only, without exception; and
- all data centre employees undergo thorough background security checks before being employed.

2.30 Having been extracted into a password protected SPSS file, 'raw data' was transferred to RCU from Ipsos Mori using a secure File Transfer Protocol website. This information was then used to produce weekly updates for the Skills Funding Agency project manager and to begin the process of response validation.

### *Operation of the paper-based survey*

2.34 Colleges and training organisations who reached agreement with the Skills Funding Agency to use paper surveys for all or part of their sample were asked to provide an estimate of their likely requirements. The providers were then sent electronic versions of the three main versions of the survey along with instructions on how to reproduce and distribute the survey.

2.35 At the end of the survey process, RCU arranged for a secure courier to pick up the completed survey forms and deliver them to the company's headquarters. On receiving the questionnaires RCU carried out an initial checking process to assess the suitability of questionnaires for scanning. Wherever possible, the surveys were processed using a high specification scanner using Formic optical character reader software. This software scans and captures the data from each survey response and also has the added advantage of retaining a full image of the document. Where scanned entry was not possible (for example because providers had photocopied the questionnaire in A4 or used staples) responses were hand-entered and subject to 10% re-entry validation. An electronic image of all hand entered questionnaires was also captured for secure electronic storage.

### 3. Sample design

3.1 Sampling for the Learner Satisfaction survey rests entirely with the providers, although they are expected to take account of guidance, which was shared on the Learner Satisfaction pages of the Agency's website, to generate a sufficient and representative sample. All eligible learners attending an eligible provider within the survey window (12 November 2012 to 31 May 2013) were potential participants (the "population"). There is a difficult trade-off between the wish to ensure all learners have a right to contribute to feedback on the quality of provision they experience and the wish to avoid placing unreasonable administrative burdens on providers.

3.2 The Skills Funding Agency's guidance notes for providers (which can be found in Annex 8) reflected this by advising providers of approaches that would help ensure "learners view participation as a right, rather than an obligation". The FE Choices Guidance 2012/13 referred to giving all learners the "right to fill in the survey". It referred "providers using a sampling approach" to use an online calculator<sup>1</sup> to identify the minimum required sample. Providers entered the number of eligible learners they expected to have in the survey period and the calculator showed the minimum required sample. The Guide stressed that it was wise to aim to exceed this minimum because some responses might prove to be duplicates or to be from ineligible learners.

3.3 The minimum sample size for all providers given by the calculator was based on the number of responses that would allow 95% certainty that the result that emerged would be within 3% of the result that would have been obtained had every learner responded to the survey (see Annex 5). The calculator also took account of the policy decision to set the maximum target as 70% of their learners where that resulted in a smaller value. The calculator reflected the standard market research formula for calculating minimum sample sizes. This is composed of four main elements.

1. The population (in this case the total number of eligible learners).
2. The confidence level (how certain you want the result to be).
3. The confidence interval (the margin for error you are willing to accept).
4. The estimated true level of the figure you are trying to measure (in this case the satisfaction level of learners which was assumed to be 80%<sup>2</sup>).

3.4 This approach is based on the assumption that all members of the population have an equal chance of being selected to take part in the survey. Where this appears not to have been the case, and when the pattern of responses differs clearly from the make-up of the population, the sample is said to be biased or "skewed".

3.5 Providers were asked to aim for a sample size that would give a margin for error or "confidence interval" 3% either side of the true level of learner satisfaction. However, samples up to a confidence interval of 5% were accepted, following the approach agreed with BIS and the Skills Funding Agency, provided they were not badly balanced i.e. skewed.

---

<sup>1</sup> Available on the Further Education Public Information website.

<sup>2</sup> The figure of 80% was established as a conservative estimate of satisfaction levels based on the results of the Version 1 survey. The calculator has been based on this figure since then.

## Further Education Public Information 2012/13 - Learner Satisfaction

3.6 A secure online website “the Provider Extranet” allowed providers to monitor the absolute number of responses as the survey progressed.

3.7 Providers were advised, in the guidance notes for providers, to “*ensure that the balance of responses is broadly representative of your learners in terms of age, gender and level of study.*” It also encouraged, without defining the term, a “*random sample*”.

### 4. Post-survey data preparation

4.1 363,375 learners completed the main online survey in 2012/13 and a further 21,118 completed paper surveys. After validation checks were completed and duplicates removed, there were a total 360,305 responses by eligible learners attending eligible providers. The number of paper-based survey responses was reduced by around 4,000 from last year, indicating that online methods are becoming increasingly embedded year on year. RCU supplied results for 889 providers who were either on the final eligible provider list or took part in the survey if they had been eligible at some point in the survey period.

4.2 Annex 3 records the ILRs used in the validation process that followed the closure of the survey. The validation work used the ILR return, R10 2012/13, which covered the period of learning from the start of the academic year to 6 June 2013. The validation process ensured:

- the removal of duplicate responses (the last response was retained);
- the reallocation of learners who had wrongly completed the UKPRN number; and
- the removal of the responses of learners known to be ineligible.
- As in previous years, the small percentage of unmatched learners was assumed to be valid respondents. This was based on the premise that providers would only ask eligible learners to participate.

4.3 The data from the paper based survey questionnaires were entered using a combination of electronic scanning and manual data entry. The print quality of the questionnaires was variable and only 55% could be scanned successfully using the automatic electronic scanning process. The main barriers to automatic scanning were:

- incorrect print size (reduced to A4 paper size or printed portrait on A3);
- poor printing quality – too faint or patchy;
- misaligned or skewed printing;
- image size shrunk or expanded beyond scanner tolerances;
- printing on individual A4 sheets with staples;

4.4 The Formic Survey Design and Data Capture System was used for scanning questionnaires and the process was followed by a 100% manual verification and editing procedure. The questionnaires that could not be scanned were entered manually using Snap software. Snap has built-in data validity checks that ensure all entered data are within set parameters which are pre-defined when setting up the survey. In addition, all the manually entered data were subject to a 10% re-entry and verification check by a supervisor.

4.5 The two datasets from the electronic and manual data capture processing were combined and a further verification check was carried out to ensure consistency between the two sets of data.

## Further Education Public Information 2012/13 - Learner Satisfaction

4.6 Annex 4 describes the process of matching responses to the ILR and gives the fields used in order to make matches. All 120 of the automatic matching combinations were applied, followed by a final manual matching process in which “near-misses” in aspects such as surname or date of birth were checked. Following these processes, 96% of all respondents were matched to the ILR.

4.7 Within the final dataset there were a substantial number of duplicate responses which were required to be removed. These were removed through a two stage process. The first stage was to focus on respondents who had been matched through to the ILR and therefore had an accurate unique learner reference. The dataset was flagged to identify any repeated learner references. Following the identification the response which was entered first was taken to be the valid response and all other responses were removed. For the responses which were not matched into the ILR, duplicates were identified by tracing instances where respondents had inputted exactly the same information for the surname, forename, date of birth, gender, age band, learner reference and UKPRN. Again the first instance of duplicate records was used and all other responses were removed.

4.8 In the next stage, invalid responses were removed from the dataset. These were:

- where the word `Test` was in any name field (except if the forename was entered correctly for example a respondent called 'Richard Test');
- any response using a clearly obscene or spurious name; or
- responses were under UKPRN 99999999 (the Skills Funding Agency dummy code).

4.9 The next process identified whether respondents were eligible during the survey window. Following the matching of respondents to the ILR, each record was updated to indicate if the respondent fell into one or more of the following funding groups:

- 16-18 Learner Responsive,
- Adult Skills Budget (covering Learner Responsive and Employer Responsive)
- Other Skills Funding Agency funding,
- Other Skills Funding Agency funding model,
- and Other YPLA/EFA funding model.

The only exceptions were:

- learners under 16;
- learners on OLASS provision;

4.10 All linked responses had their key characteristics updated from the ILR to ensure accurate comparison of response levels to the 16 learner groups used for the weighting and skew calculations. Respondents not linked to the ILR, were presumed to be eligible and it was presumed that the entered data were correct.

## Further Education Public Information 2012/13 - Learner Satisfaction

4.11 The 16 learner groups were: -

1. 16-18 Females with a highest level at Entry Level or unknown level
2. 16-18 Females with a highest level at Level 1
3. 16-18 Females with a highest level at Level 2
4. 16-18 Females with a highest level at Level 3 and above
5. 16-18 Males with a highest level at Entry Level or unknown level
6. 16-18 Males with a highest level at Level 1
7. 16-18 Males with a highest level at Level 2
8. 16-18 Males with a highest level at Level 3 and above
9. 19+ Females with a highest level at Entry Level or unknown level
10. 19+ Females with a highest level at Level 1
11. 19+ Females with a highest level at Level 2
12. 19+ Females with a highest level at Level 3 and above
13. 19+ Males with a highest level at Entry Level or unknown level
14. 19+ Males with a highest level at Level 1
15. 19+ Males with a highest level at Level 2
16. 19+ Males with a highest level at Level 3 and above.

4.12 The final calculation of eligible learners and provider profiles was based on the Individualised Learner Records:

- R10 2012/13 which was issued by the Data Service on 26<sup>th</sup> June 2013

The calculation took into account the number of eligible learners who were at the provider during the survey window. The final element of this process was to calculate the provider learner profiles. Each learner within each of the relevant datasets was flagged into one of the 16 categories.

### 5. Data analysis following the preparation of the survey data

#### Introduction

5.1 The key quantitative elements of the data analysis phase were:

- calculating base sizes and minimum sample size targets;
- applying corrective weightings for sample skew and survey method;
- applying tests for sample validity; and
- calculating final scores.

#### Validation

5.2 The latest available ILR datasets were used to calculate the number of eligible learners attending each provider in the survey period (12 November 2012 to 31 May 2013). This figure was then used to calculate the minimum returned sample size that would generate 95% confidence that the measured results were within 5% of the estimated true value, providing the sample was broadly representative. During the course of the survey, Ipsos MORI hosted a Provider Extranet giving daily updates on the total number of returned online surveys broken down by the 16 learner categories to help providers to take action to ensure their sample was not skewed.

5.3 Following validation of the response data and the removal of ineligible learners and duplicate submissions, 550 providers passed the threshold for either sample that gave a 95% confidence level with a 5% confidence interval or the threshold of at least 70% of all eligible learners providing valid responses. Sample sizes with a confidence interval of 3% or less automatically passed the quality test whereas those with confidence intervals between 3% and 5% and those who had 70% of all eligible learners providing valid responses were checked for skew. Any provider with less than 10 eligible learners or who had less than 10 responses were deemed to have failed the quality test.

#### Skew testing

5.4 The skew test was used to ensure that the degree of bias within the sample submitted by individual providers was within acceptable parameters. Analysis of ILR data for the population (see 4.2) produced a profile of learners for each individual provider, based on the 16 categories listed in 4.11.

5.5 The measure for skew was derived from comparing the spread of a provider's returned sample across these categories to its population profile based on the ILR. In a perfectly representative sample, the percentage of learners within each of the 16 categories would be exactly the same as the percentage of learners within each category based on the ILR data. The skew factor was defined as the sum total percentage of respondents within each category that were above or below the required percentage for a perfectly representative sample (Annex 5 records the formula used). Following an approach agreed with the then LSC and BIS, skew factors up to 40% were defined as correctable with the application of appropriate weighting. Skew factors above 40% were regarded as not correctable.

## Further Education Public Information 2012/13 - Learner Satisfaction

5.6 The exception was samples that were well in excess of the minimum required to generate a confidence interval of 5%. In these cases skew resulted from over-sampling, where providers appeared to have followed the guidelines to encourage as many learners as possible to take part in the survey but had had particular success with some groups (typically 16-18 year-olds). Where the returned sample was large enough to generate a confidence interval of 3% or less, the sample was deemed valid regardless of its initial skew.

### Corrective weighting

5.7 Due to the nature of the sampling process, which was managed by providers at the time of the survey, rather than being based on the ILR after the learning was completed it was inevitable that most samples would be skewed to a greater or lesser degree. In order to ensure that no provider was advantaged or disadvantaged by the skew in their sample, weightings were applied to all returned samples. These ensured that samples were rebalanced to be representative in terms of age, gender and highest level of study prior to the calculation of a score. This allowed a fair comparison between providers. The combinations of age, gender and level of study produced 16 different categories listed in Section 4.11, and returned samples were compared to population profiles for each provider using these categories. The formula used to calculate skew is set out in Annex 5.

5.8 The results from the 2007/08 Learner Satisfaction Pilot survey reinforced evidence from research literature that responses to surveys are influenced by the response method. The Pilot responses produced a consistently higher satisfaction level among paper responses compared to online responses, which could be assumed to reflect the perceived degree of anonymity. Crucially, providers had a free choice during the Pilot on whether to use paper or online methods. As a result, the relative variation in responses is a reliable guide as to the level of method bias. The average satisfaction score on paper questionnaires was 2.45% (variance, not percentage points) higher than the average satisfaction score for online questionnaires. Therefore, for the 2012/13 Learner Satisfaction survey, a corrective weighting factor of 0.9755 was applied to all paper responses to effect a reduction of 2.45% in their score.

### Scoring

5.9 All the scoring questions in the survey have eleven-point response scales, running from "0" representing "very bad" through to "10" representing "very good." No intervening points on the scale are labelled. Responses of "not applicable" (or missed questions in the case of paper responses) were removed from the numerator and denominator before any score calculations were made, ensuring they had no impact on the calculation of the provider's score.

5.10 Each provider's weighted total of valid survey responses was calculated after the application of the paper method adjustment (see 5.8) and the net effect of any correction for skew (see Annex 5), although the latter was typically neutral.

5.11 The points total from the weighted scoring responses was divided by the total number of weighted scoring responses to give a mean score out of 10. Annex 6 provides a flow chart to explain this process. All questions were given equal weightings in the score calculation.

## Further Education Public Information 2012/13 - Learner Satisfaction

### Course level Survey

5.12 The Learner Satisfaction Survey offered an option for providers taking part in the online survey to ask their learners to comment on their satisfaction at a course level (learning aims). Three core questions that could reasonably be expected to apply at a course level (quality of teaching, degree of respect and overall satisfaction) were copied from the main survey.

5.13 The approach relied on learners having access to a course code that could be nationally-recognised for feedback and comparative purposes and this meant the official aim code recorded on the Learning Aim Reference Application (LARA).

5.14 The analysis below records the number of responses to the course level survey and the extent to which these responses were valid.

<b>Total Valid Responses with a Valid Qualification Code</b>	<b>41,706</b>
<b>From Valid Learners</b>	<b>29,098</b>
<b>Additional Top-up from the Main Survey for Learners Attending One Course</b>	<b>46,483</b>
<b>Total Course Level Responses</b>	<b>88,189</b>

### 6. Legal and ethical issues

#### Compliance issues

6.1 The contractors appointed to deliver the 2012/13 Learner Satisfaction survey, RCU Ltd. and Ipsos MORI, both adhere fully to the Market Research Society Code of Conduct and are accredited under the international market research industry standard ISO 20252. These both place a heavy emphasis on ensuring that survey respondents give informed consent to their involvement in any survey and that the uses that will be made of respondents' answers are made clear to them before they participate.

6.2 The Code of Conduct and ISO 20252 also require full compliance with Data Protection legislation, which ensure that the arrangements for the holding and possible sharing of a respondent's answers are made clear to the individual before they consent to take part. In the case of public bodies such as the Skills Funding Agency, this requirement has to be taken into account alongside the requirements of the Freedom of Information Act, under which an organisation can be asked to make data it holds available to a third party.

6.3 During the development of the 2008/09 version of the survey, the then LSC's Learner Satisfaction performance indicator lead worked closely with the LSC's solicitor to ensure compliance with all these aspects. A particular challenge was to ensure that any form of wording required by legislation was presented to learners in clear and accessible language, so that the learner could be judged to have given informed consent to their participation. Almost inevitably these parts of the questionnaire had a higher standard measure of gobbledygook (SMOG) test rating. (Summaries of the SMOG and how it works are available across the internet, for example -<http://www.readabilityformulas.com/smog-readability-formula.php>).

6.4 It was particularly important to make clear to learners that although the survey was confidential it was not anonymous. This is because the identification of learners was essential to allow validation and to support linkage to ILR data in order to enhance analysis (without asking a long series of cross-referencing questions).

6.5 The protections built into the survey were as follows:

- a statement on the opening page that "your answers will go directly to two survey companies - Ipsos MORI and RCU";
- a statement on the next page to reassure respondents that the survey analysis would produce aggregate results, not identifiable responses, and that "None of your lecturers, trainers or supervisors will be able to see your answers";
- explanation of the prime purpose of the survey, namely that the results would be used "to tell future learners what different colleges are like";
- confirmation at the end of the survey that the process had followed the rules of the Market Research Society and provision of a direct e-mail address for Ipsos MORI that respondents could use if they had any concerns;
- guidance on the proposed length of time for which the data would be retained and an opportunity to accelerate this: "Ipsos MORI and RCU will keep your answers for no more than 18 months"; and

## Further Education Public Information 2012/13 - Learner Satisfaction

- a final check that learners were happy with their responses before they hit the submit button.

### Undertakings given to learners

6.6 The FE Choices Learner Satisfaction survey is a complex logistical and methodological exercise, with 889 providers eligible for the 2012/13 survey. In order to ensure that the results of the Learner Satisfaction survey gave a fair and consistent assessment of the views of learners, the circumstances in which learners made their responses had to be as consistent as possible. Sections 2 and 3 of this report explained the approaches taken to ensure that the survey was undertaken at a standard time, towards the end of the learning period, and that there were no biases resulting from the selection of learners and that the survey was as accessible as possible. However to be confident in the robustness of the results it was important that the atmosphere in which learners' views were gathered (such as the way the survey was introduced to learners by staff and how it was administered) was as consistent as possible.

6.7 The Skills Funding Agency made available<sup>3</sup> guidance notes for providers (which can be found in Annex 8).

### Opt-out on data storage

6.8 The ability of learners to opt out on having their responses stored for 18 months is a standard approach in surveys that allows respondents who have any concern about the security and confidentiality of their responses to have them wiped. Normally this does not preclude the respondents' answers from contributing to the survey outcomes.

6.9 Incoming data from the online survey were subject to daily encrypted backups which were stored off-site in-line with the RCU Information Security Policy. All the responses from the survey are now stored in password protected areas of secure data servers with limited access rights for authorised personnel. All backups are encrypted and stored-off site. Paper surveys are stored securely at RCU with back-up scans on a secure server. Electronic copies will be wiped and paper copies shredded 18 months after the survey closed.

---

<sup>3</sup> Via the Learner Satisfaction pages of the Further Education Public Information website.

### 7. Equality, diversity and accessibility issues

#### Compliance with web accessibility standards

7.1 The questionnaire was designed to be user friendly. In-survey navigation buttons allowed respondents to return to questions and review their answers before submitting their final responses and a progress bar appeared at the top of each screen, which provided respondents with continuous update on how many questions remained. The 2008/09 testing confirmed that the navigation was fully accessible to non-mouse users.

7.2 The survey was compatible with handheld computers such as BlackBerry devices and smartphones.

7.3 Learners were also able to change the background colour (particularly important for learners with visual impairment or dyslexia) and size of the font using prominently placed 'accessibility buttons'. This aspect was informed by guidance obtained from the Royal National Institute for the Blind website.

7.4 The main online questionnaire was developed to minimise respondent error and increase its accessibility for all ability levels. Where possible, checks were put in place to make sure that respondents were not inputting incorrect data (for example the date of birth format was illustrated and the program corrected for minor deviations from this). Respondents were also informed automatically if they had failed to complete an essential field. When such errors were made, prompt screens appeared to inform respondents of what corrective action was needed to continue with the survey.

7.5 A 'British Sign Language' (BSL) version of the survey was developed for 2012/13. This was designed for learners with literacy difficulties, learning difficulties or visual impairments and was developed with the accreditation of the Campaign for Plain English. The BSL version of the survey incorporated a video in to every page of the online survey; each video provided a signed version of the text with a voiceover that read out the question and instruction wording.

7.6 The provider guidance notes made clear that providers were to use discretion when deciding whether or not to include individual learners with learning difficulties and/or disabilities in their sample. Where the application of such discretion would significantly impact on the potential population (total number of eligible learners) for the survey, providers were advised to notify the Skills Funding Agency. Providers also had the option (see Section 3) of applying to use paper questionnaires for learners for whom on-screen completion would be impossible.

## **8. Timescales**

- 9.1 The survey took place as planned between 12 November 2012 and 31 May 2013.
- 9.2 Paper surveys were collected following the survey closure on 1<sup>st</sup> May 2013.
- 9.3 The technical report was completed on 20 September 2013.
- 9.4 The data, as required by the data specification, was submitted on time to Data Service on 30 August 2013.

## 9. Summary of key methodological aspects

- **Population base:** all eligible learners
- **Required confidence level:** 95%
- **Required confidence interval:** 5%
- **Small provider concession:** sample over 70% deemed sufficient
- **Acceptable skew level:** up to 40% providing the achieved confidence interval is 5% or lower (or 70% for small providers). Any provider with a confidence interval of 3% or less is not tested for skew.
- **Basis for corrective weightings:** sixteen categories (two genders, two age bands, four levels)
- **Assumed satisfaction level in sample calculator:** 80%
- **Observed satisfaction level for confidence interval calculation:** 84%
- **Rating scale:** 0-10 for all questions
- **Downward weighting of paper response:** 0.9755
- **Approach to unvalidated respondents:** allow
- **Inclusion of learners with learning difficulties and/or disabilities:** provider discretion based on guidance provided to encourage participation where appropriate.

### Annex 1: Identification of eligible providers

The list of eligible providers was produced by Data Service and updated at different points during the survey window. These lists were used to inform providers that they were required to take part in the Learner Satisfaction Survey.

Following the closure of the survey window Data Service produced a final provider list which was used to calculate the final results.

The table below is taken from the Skills Funding Agency website and shows which provider types are eligible for the survey.

Provider grouping	Learner Satisfaction
General FE Colleges	Yes
Independent Specialist Providers	No
Specialist Colleges (including Art & design, and Land based)	Yes
Dance and Drama Academies	No
Specialist Designated Institutions	Yes
Higher Education Institutions	Yes
Other Public Funded Institutions	Yes
Private Sector Public Funded Institutions	Yes

### Annex 2: Identification of eligible learners

The criteria that determined which learners were eligible for the survey were set out in the Further Education Public Information Learner Satisfaction Survey provider guidance 2012/13.<sup>4</sup> Learners attending eligible providers and their sub-contractors between 12 November 2012 and 31 May 2013 were eligible for the survey if they met any one of the following criteria:

- 16-18 Learner Responsive Funded,
- Adult Learner Responsive Funded,
- Employer Responsive Funded,
- Other Skills Funding Agency Funded,
- Other Skills Funding Agency funding model,
- Other YPLA/EFA funding model.

The only exceptions were:

- learners under 16;
- learners on OLASS provision;

While all eligible learners were entitled to take part in the Learner Satisfaction survey, providers were free to decide whether to attempt a census of all such learners or to attempt to achieve a representative sample.

**Annex 3: Dataset used in sample verification**

1. Single Individualised Learner Record (R10) 2012/13

### Annex 4: ILR fields used to match and validate survey responses

RCU used a two stage process to link the survey responses through to the Individualised Learner Records for 2012/13. In Stage 1, RCU designed a protocol to link the survey responses to the ILR using key fields in each dataset. The fields used were surname, forename, initial (derived from forename), date of birth, gender, age band, learner reference, unique learner number and Provider Reference Number. To allow for this process fields were re-coded to enable a direct match between the datasets, for example in the survey data, gender was coded 1 for Female and 2 for Male, while in the ILR these are coded F and M.

RCU then designed a process hierarchy which used the most robust matching first, with all the possible fields for matching, then removed fields in order of least impact. This resulted in 120 different matching combinations which linked the survey data and the ILR. Following the automated matching, a further manual process was undertaken to match responses that could not be done automatically. Once a match was established the survey data were then updated to include the learner identifier from the ILR and the process used to match.

In each process the UKPRN was used to filter by provider, however in some later processes this was excluded to catch any respondent who had entered the UKPRN wrongly but other check list information correctly.

## Annex 5: Formulae used to calculate confidence intervals and skew

### Confidence interval (minimum sample size)

Sample Size Calculation (as used in the Sample Size Calculator)

$$\text{Sample Size} = \frac{Z^2 \times p \times (1-p)}{c^2}$$

Correction for Finite Population (for known population size)

$$\text{Adjusted sample size} = \frac{\text{Sample Size}}{1 + \frac{\text{Sample Size} - 1}{N}}$$

Confidence interval of a returned sample

$$\text{Confidence Interval} = Z \times \sqrt{\frac{p \times (1-p)}{n}} \times \sqrt{\frac{N-n}{N-1}}$$

Where:

$Z$  = Z value (e.g. 1.96 for 95% confidence level)

$p$  = Assumed / observed % expressed as a decimal (e.g. 84% satisfied = 0.84)

$c$  = Confidence interval, expressed as decimal (e.g.  $\pm 5\%$  = 0.05)

$N$  = Number of eligible Learners on provider's ILR

$n$  = Number of valid responses

### Skew formulae

Skew calculation

$$Skew = \frac{\sum_{i=1}^{16} |r_i - s_i|}{2}$$

Where:

$i$  = Each individual learner category, ranging from 1 to 16

$r$  = Percentage of learners on the provider's ILR in the  $i^{\text{th}}$  category

$s$  = Percentage of learners in the sample in the  $i^{\text{th}}$  category

$| |$  = Absolute value

### Weighting

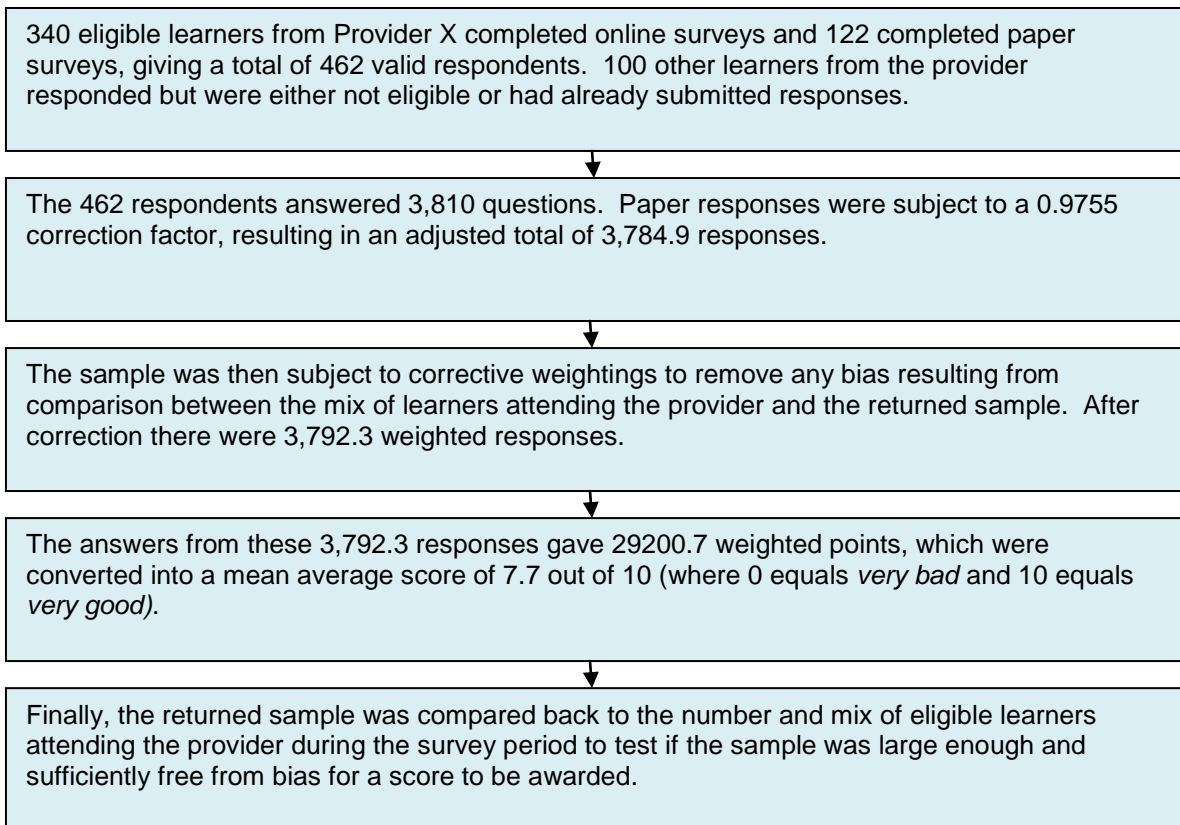

The first stage of producing a weighting factor was to calculate a quotient for each of the 16 categories by taking the percentage of learners in the sample and dividing by the percentage of learners on the provider's ILR. A value greater than one would mean that the provider had over-sampled in that particular learner category and a value of less than one would mean the provider had under-sampled.

The inverse of this quotient was then calculated to produce the weighting factor for each of the 16 categories. Every individual learner in the sample was then assigned a weighting factor depending on the category to which they belonged according to their age, gender and level of study. The assigned weighting factor was then applied to the individual's score.

In effect, the scores of individual learners in under-represented categories had a slightly greater impact on the overall provider score than the scores of individual learners from over-represented categories. However, because this is a neutral weighting system the overall net effect on sample base size is zero where all learners could be assigned to one of the 16 categories. In practice, not all learners could be matched to a category and so these were assigned a weighting factor of one, producing slight variations in sample base sizes when weightings were applied.

## Annex 6: Formulae used to calculate scores for valid samples

### How an example provider's score was calculated

Providers who were not awarded a score were allocated a Missing Score Reason Code (MSRC) to describe the reason why a valid score could not be given. These are shown in the table below, along with the number of providers receiving each MSRC.

Missing Score Reason Code	Description	Providers
NULL	Score is robust and can be shown	550
66	No Eligible Learners	7
67	No Respondents	103
68	Only Invalid Respondents	2
69	Confidence Interval $\leq$ 5% but Skew $>$ 40%	14
70	Confidence Interval $>$ 5%	190
71	Less than 10 Eligible Learners	23

**Annex 7: Copies of each questionnaire**

## Examples of qualifications for question (i)

Read the list of qualifications below and tick the relevant box to tell us the highest level of qualification you are taking now. If you are not sure, ask a member of staff.

### Entry Level 1, Entry Level 2 or Entry Level 3

(For example: Entry Level Award, Entry Level Certificate, Entry Level Diploma)

### Level 1

(For example: Level 1 Award, Level 1 Certificate, Level 1 Diploma)

### Level 2

(For example: Level 2 Award, Level 2 Certificate, Level 2 Diploma, Apprenticeship, GCSE)

### Level 3

(For example: Level 3 Award, Level 3 Certificate, Level 3 Diploma, Advanced Apprenticeship, Access to Higher Education, A level, AS level)

### Level 4 and above

(For example: Award, Certificate or Diploma in level 4 or above, Degree, Higher National Diploma, Higher National Certificate)

## FE Public Information Learner Satisfaction Survey 2012/13

Welcome to this short Learner Satisfaction Survey. Learners all over England are answering these questions. Your answers are very important. The Skills Funding Agency will use your answers to tell future learners what different colleges are like.

In the questions that follow we use the word "college" to mean a further education college, adult learning provider or university.

Your completed survey will go to two survey companies - Ipsos MORI and RCU. Ipsos MORI and RCU will add your answers to the answers from other learners. They will send us, the Skills Funding Agency, the results. None of your lecturers, trainers or supervisors will see your answers.

The survey follows the rules of the Market Research Society. If you have any worries about the survey, you can contact the research company, Ipsos MORI at <http://fechoices.ipsos-mori.com/contactus>.

Ipsos MORI and RCU will keep your answers for no more than 18 months. If you want us to destroy your answers before then, please email us at [servicedesk@thedataservice.org.uk](mailto:servicedesk@thedataservice.org.uk).

If you are happy to take part in the survey, please carry on.

(a) What is your personal learner number?

Grid for personal learner number

(b) First name

Grid for first name

(c) Surname or family name

Grid for surname or family name

(d) Date of birth (dd/mm/yy for example, 15/02/82)

Grid for date of birth

Please answer the following questions by marking X in the box.

(e) Are you writing in the answers yourself?

- Yes/No options with checkboxes

(f) How old are you?

- Age range options with checkboxes

(g) Are you:

- Gender options with checkboxes

(h) Is any part of your course leading to a qualification?

- Qualification options with checkboxes

(i) If yes, what is the highest level of qualification you are taking now?

(Choose the level you think your highest course is at. If you do not know, check the examples on the back page or ask a member of staff at your college. Please choose one option).

- Qualification level options with checkboxes

To answer the following questions please give each a score out of ten. "0" will mean "very bad". "10" will mean "very good". Try to answer every question, but if a question does not apply to you at all, please choose "Does not apply".

Please answer the following questions by marking X in the box.

Table with 10 questions (Q1-Q10) and 11 columns for rating (0-10) and 'Does not apply'.

Thank you very much for your time.

**Annex 8: Learner Satisfaction Guidance**

FE Choices Learner Satisfaction survey 2012/13  
Guidance for Colleges and Training Organisations – Updated October 2012

---

## Introduction

The Learner Satisfaction survey for 2012/13 runs from 12 November 2012 to 31 May 2013. Information and guidance will be published on the [FE Choices Information web pages](#) throughout the survey period and notices will also be posted in the Skills Funding Agency's [Update](#).

Colleges and training organisations that are taking part in the survey will need to visit the [Provider Extranet](#) on a regular basis. The Provider Extranet will give regular updates on all aspects of the surveys, including near-live feedback to individual providers on their response rates. To access this site you will need your UKPRN provider code and your unique password, which has been sent to your Principal or Chief Executive.

**AS A COLLEGE OR PROVIDER WHAT DO YOU NEED TO DO?**  
Check whether you are in scope by consulting: [FE Choices Information - Providers in scope](#)

### How to support the survey

To participate fully in the survey and ensure they gain a valid score providers will need to visit the [Provider Extranet](#) on a regular basis. We have sent to your Principal or Chief Executive a web-link, password and log-on that will allow your organisation to check response rates to the online survey at any time during the survey period. These figures will be updated on a daily basis and will tell you your achieved responses and the extent to which your response pattern appears to be representative.

Skills Funding Agency  
Cheylesmore House Quinton Road Coventry CV1 2WT  
T 0845 377 5000 [www.skillsfundingagency.bis.gov.uk](http://www.skillsfundingagency.bis.gov.uk)  
A partner organisation of the Department for Business, Innovation & Skills

## Further Education Public Information 2012/13 - Learner Satisfaction

It is recommended that providers use this information to monitor responses to ensure that they achieve the minimum number of completed questionnaires that will need to be returned to give a reliable measure of Learner Satisfaction.

The Provider Extranet also gives you the opportunity to let us have contact details for staff that are involved in the survey as well as giving us the dates that you plan to run the survey so we do not send you unnecessary reminders. For more information, please see the relevant pages on the Provider Extranet.

**Consider the best way to give as many in-scope Skills Funding Agency and EFA funded learners as possible the opportunity to take part in the survey.** You will only be able to get a score in the survey if the number of learners responding is a sufficiently large and representative sample of all the in-scope learners in your organisation during the entire survey period.

To check what your minimum sample size is likely to be, please estimate the number of in-scope learners you will have between 12 November 2012 and 31 May 2012 and use the online calculator which is available on the [Provider Extranet](#).

We recommend that you aim for a census approach to the survey rather than a sampling approach and start the survey early to allow enough time. By doing a census you will make sure that:

- you get enough valid responses to obtain a score
- your responses are representative of your learner population with regard to age, gender and level of study.

**Providers whose responses are not representative of their learner population cannot be awarded a score.**

We will correct statistically for minor imbalances but samples will be rejected if they are badly skewed, i.e. if some learner groupings are over or under represented. The figure obtained should be used as a guide only and we strongly encourage colleges and providers to exceed this figure to ensure the minimum number of completed surveys is achieved. Your learners (and those of your sub-contracted providers) can log-in to the survey by entering your UKPRN and their personal Learner Reference Number, as entered on the ILR. Please ensure that your learners have access to this information. If you do not know what your UKPRN number is please visit the UK Register of Learning Providers (UKRLP) website, where you can access details. In the survey we refer to this number as the "code number for your college or learning provider". It is important learners

### Skills Funding Agency

Cheylesmore House Quinton Road Coventry  
CV1 2WT  
T 0845 377 5000  
[www.skillsfundingagency.bis.gov.uk](http://www.skillsfundingagency.bis.gov.uk)  
A partner organisation of the Department for  
Business, Innovation & Skills  
SkillsFundingAgency-P-120284

2 of 6

## Further Education Public Information 2012/13 - Learner Satisfaction

enter this number because it ensures that your learners' responses are correctly attributed to your organisation. Learners cannot access the survey without the UKPRN. Please note that you should also distribute this number to any sub-contractors who deliver in-scope learning on your behalf and ask them in turn to communicate this to those of your learners who are with them. If this learning is part of your in-scope provision it will be included when we calculate your learners.

In some providers, ULNs or Learner Reference Numbers are used routinely as intranet log-ins and appear on learner ID cards, meaning learners will have the number easily available to them. If this is not the case in your organisation, please give consideration to the best way to get this information to learners in readiness for the survey. (Some learners may not be familiar with the terminology and know their ULN or personal learner reference number as the "learner id".) Please note that learners will still be able to complete the survey if they have lost or forgotten their Learner Reference Number but if this happens for a high proportion of survey respondents it will delay our ability to turn the survey results around quickly. Accurate ULNs or Learner Reference Numbers will also increase the value of response breakdowns we will be able to give you at the end of the survey. We use the ULN or Learner Reference Number to confirm that the learner is in scope for the survey and also serves as a protection for you as the provider by ensuring that learners cannot enter duplicate submissions.

Please note that the ULN and personal reference number are both allocated to learners at or shortly after the time of enrolment. Please ensure your learners use either the ULN or their personal learner reference number. This is essential to ensure the accuracy of the survey.

Learners will complete the survey by following a link to the dedicated survey webpage. Colleges and providers could distribute the link in emails, messages on their intranet, and letters or posters, depending on the approach that will get the best response.

### **Decide if it would be beneficial for some of your learners to complete the survey on hand-held communication devices such as BlackBerrys**

The survey can be accessed and completed from any internet enabled communication device such as BlackBerrys. The survey will be available 24 hours a day during the survey period and can be completed from any internet-linked computer, palm top, BlackBerry or other smart phone. More guidance on this will be available on the [Learner Satisfaction web pages](#).

### **Consider how you want to integrate the Learner Satisfaction survey with your own survey processes**

If you want learners to complete one of your own surveys after the Learner Satisfaction survey, you may want to use the "hyperlink-embedded method" to

#### **Skills Funding Agency**

Business, Innovation & Skills  
SkillsFundingAgency-P-120284

3 of 6

## Further Education Public Information 2012/13 - Learner Satisfaction

achieve this. For guidance on how to link the surveys, please read "Guidance on hyperlink-embedded method for linking the Learner Satisfaction survey with your college or provider survey" which is available on our [website](#).

To comply with the Data Protection Act, it is important that you follow this guidance.

The advantage of the 'hyperlink-embedded method' is that it works from any starting point where you may want to embed the hyperlink – such as a Word document, an email or your intranet home page. This method is therefore versatile and also gives a consistent user experience.

### Course level feedback

As last year, learners are encouraged to answer a small number of questions towards the end of the survey at course level. Feedback from completing course level responses has given colleges and providers useful information. Please see the [case studies on course level responses for more information](#).

To facilitate this you will need to provide your learners with their specific Learning Aim codes from the Learning Aims Reference Application ([LARA](#)). Guidance on using the LARA can be found on [The Data Service website](#).

You will receive course level responses 'back benchmarked' against all the other respondents nationally who were taking each Learning Aim. Colleges and providers have told us this is very useful evidence for quality improvement.

### Decide when to administer the survey during the survey window: 12 November 2012 until 31 May 2013

Colleges and training organisations can decide how they manage the administration of the survey throughout this period. It will be possible for learners to log on at any time of the day, and from any location and any machine, provided that they have their provider's UKPRN and personal Learner Reference Number to hand. All learners on programmes during this period are entitled to take part including learners whose learning programmes end in or before December 2012.

Colleges and training organisations can let us know what their planned survey start and end dates are on the Provider Extranet.

### Decide if you need to apply for permission to use some paper surveys

The Learner Satisfaction survey is an online survey with an extensive survey window. In exceptional circumstances providers can apply to use paper surveys if it is impossible for some learners to complete the survey online during the survey period.

**Providers who wish to use paper based surveys have until 16 November 2012 to apply.**

**Providers who do not make an application by this date will be expected to use the survey online.**

If this is the case for some of your learners and you wish to apply for paper surveys, please follow the link on the [Provider Extranet](#).

Providers have the option of receiving course level feedback from online survey responses but we cannot offer this facility for paper surveys.

Paper survey responses are subject to a small downward statistical adjustment during the calculation of the score to reflect the different pattern of responses for learners completing paper and online surveys.

All paper surveys **must** be completed by a learner or by someone with a learner support role if the learner has learning difficulties or disabilities. It is not acceptable for staff to interview learners or summarise views obtained in other ways.

**The paper based survey window ends earlier than the online survey and the final day is 30 April 2013.**

All responses will be collected by courier from providers on **1 May 2013** and only those responses that are collected at that time can be included in the response calculation.

### **Sell the benefits of the survey**

Some colleges and providers approach surveys of this kind as a purely administrative exercise. However, there is evidence that learners will respond better to the survey if they understand its importance and see it as part of their entitlement as a learner. It would be useful if providers considered the best way to publicise the survey at an early stage, so that learners see it as an opportunity to share their views, rather than an obligation.

### **Convey the ease with which the survey can be completed**

The survey is very short, taking only a few minutes for most learners to complete.

**Plan to include all Skills Funding Agency or EFA funded learners including those with learning difficulties and/or disabilities and those undertaking programmes in ESOL.**

## Further Education Public Information 2012/13 - Learner Satisfaction

Further information is available in a [Guidance Document](#) for Colleges and Training Organisations on how to give help to your learners.

Prior to the survey ensure your learners have access to:

- Your provider reference number (UKPRN).
- Either their Unique Learner Number (ULN) if this is available or their personal Learner Reference Number as entered on the Individualised Learner Record (ILR).
- The unique reference for each Learning Aim from the Learning Aims Reference Application (LARA), formerly the Learning Aims Database (LAD).

### Delivering your results

At the end of the survey we will use your learners' responses to calculate your Learner Satisfaction score. We will also give you further information on your learners' responses to each question and the pattern of responses by broad learner group as well as the responses to the course level questions.

If you have any questions, please:

- See the FAQs on the [Provider Extranet](#)
- Go to the [Learner Satisfaction survey pages](#)
- Contact the Data Service Helpdesk: [servicesdesk@thedata-service.org.uk](mailto:servicesdesk@thedata-service.org.uk)
