## Introduction

This explanatory note sets out how the Education Funding Agency (EFA) are reviewing the way disadvantage block 2 (DB2) funding is calculated within the 16 to 19 funding allocations. It gives details of the possible change to the methodology for future years and explains the file shared with you to illustrate the current position with your data for review and to use in ensuring that your 2015 to 2016 final data returns are completed accurately.

## Purpose

Historically the EFA has used the Young People's Matched Administration Dataset (YPMAD) to calculate the funded instances used for DB2 in funding allocation calculations. This has meant that there is a 3 year lag in the data (2013 to 2014 YPMAD was used in the 2016 to 2017 allocations) and it relies on matching Individualised Learner Record (ILR) data with exam results data for prior attainment.

The ILR now collects information on prior attainment directly from institutions with the intention of potentially using it to calculate DB2 instances per student. We are reviewing this data to assess whether we should change the methodology to use it rather than YPMAD which would mean that there would only be a two year lag and it would be based on the same data as the other funding factors used in the allocation calculation.

## Scope

We are reviewing data for institutions who have received a funding allocation for 2016 to 2017 and have returned ILR data for 2015 to 2016.

## Overall approach

The instances attracting funding per student used in your 2016 to 2017 allocation is the number of instances when a student does not have GCSE maths and/or English at grade A\* to C by the end of year 11.

A student without at least a C in maths and English counts as 2 instances, a student without at least a C in either maths or English counts as 1 instance and a student with Cs (or above) in both counts as 0 instances. This is shown in table 1 below:

<b>Example</b>	<b>GCSE English at A* to C by Year 11</b>	<b>GCSE Maths at A* to C by Year 11</b>	<b>Instance Value</b>

Student 1	Yes	Yes	0
Student 2	No	Yes	1
Student 3	Yes	No	1
Student 4	No	No	2

**Table 1: Instances per student example**

At institution level the factor used in the funding allocation calculation is calculated as set out below:

Instances attracting funding per student = total instances / total student number

The DB2 funding for students that did not get at least a grade C in English and/or maths was shown on your funding allocation statement, further details of how this funding was calculated can be found in the [funding allocation statement explanatory note](#) found on GOV.UK.

We are not reviewing the methodology described above, we are however looking at using a different data source in order to carry out the same calculation using the field described below:

**ILR - Learner Funding and Monitoring (FAM), Eligibility for EFA disadvantage funding (EDF)**

This field must be recorded for EFA funded learners, where applicable, to identify where a student has not achieved maths or English GCSE at grade A\* to C by the end of year 11. If the student's GCSE result at the end of year 11 is unknown at the start of the teaching year, then this field should be completed and updated if required once the result is known.

<b>FAM Type</b>	<b>FAM Code</b>	<b>FAM Code Description</b>
EDF	1	Student has not achieved a maths GCSE (at grade A* to C) by the end of year 11
EDF	2	Student has not achieved an English GCSE (at grade A* to C) by the end of year 11

**Table 2: ILR Prior Attainment Fields for DB2 calculation**

Students with this field recorded will attract an instance for each entry to a maximum of 2 per student where neither maths nor English has been achieved at A\* to C by year 11.

The [full guidance](#) to completing the ILR can be found on GOV.UK:

## Data file explanation

To show you how your current 2015 to 2016 data looks in terms of instances per student and the overall institution level instances per student attracting funding, a disadvantage block 2 data review file has been created for you. The file includes four separate tabs:

**Disadvantage Block 2 Instances** – this shows the instances per student used in your 2016 to 2017 allocation alongside the instances per student calculated from your 2015 to 2016 data as per the methodology described above. It is important to note that these 2 figures relate to different years, so there will inevitably be differences as a result of that in addition to any other data-related differences.

**Disadvantage Block 2 Data** – this shows the individual students from your 2015 to 2016 data (R10 for ILR and Autumn 2015 school census), whether they are eligible for EFA funding and the instances of DB2 funding each attracts. This is used to calculate the institution level instances per student on the tab before.

**Student names** – a tool to enable you to add student names to the data on the Disadvantage Block 2 Data tab to aid reviewing your data.

**Glossary** – a technical description of each column in the Disadvantage Block 2 Data tab of the workbook, including data sources used.

## Next steps

Please look at your file to see what your data is currently showing in terms of instances per student and review your data ahead of the completion of your final data return for 2015 to 2016 to ensure that the prior attainment fields are completed accurately.

The EFA will be reviewing the end year ILR data later this year to calculate the final instances per student in order to review this against the 2014 to 2015 YPMAD data that would ordinarily have been used for the 2017 to 2018 allocation calculations, we will then take a view as to whether it would be appropriate to move to using ILR data from 2017 to 2018 onwards.

If you have any questions regarding this communication or the example statement you received, please contact us using our [on-line enquiry form](#).
