Sample medium-term units for special schools ................. 44
Introduction

The Framework for teaching mathematics: Years 7, 8 and 9 provides teachers with guidance on meeting the National Curriculum requirements for mathematics. It sets out yearly teaching programmes showing how objectives for teaching mathematics can be planned from Year 7 to Year 9. A key task in developing medium-term plans for Key Stage 3 mathematics is to identify the objectives for the units of work that are going to be taught. In doing this, schools may choose to start from their existing schemes of work or, alternatively, may find that these sample plans provide a useful starting point.

The sample plans are designed to continue the progression and expectations established in the yearly teaching programmes up to Year 6. They are based on the examples of planning charts in the Framework. There are many other ways to organise the mathematics curriculum in Key Stage 3. The planning charts indicate dependencies between topics but the order and content of the units can be adjusted.

Each sample plan identifies core objectives that define a minimum expectation for the majority of pupils in a particular year group. Plans for particular year groups are designed to show:

- progression in the teaching objectives for each strand of the curriculum;
- links between the teaching objectives, bringing together related ideas across the strands;
- opportunities to revisit topics during the year (the pitch of the second and subsequent units of a topic needs careful adjusting in the light of teachers’ assessment of pupils’ progress);
- how objectives for using and applying mathematics can be incorporated into units.

For each term, suggested objectives for oral and mental mathematics are also identified. Oral and mental work can both support the main teaching programme as well as provide a means of regularly revisiting important elements.

Many schools set pupils for mathematics. Teachers of higher sets may well base their pupils’ work on the programme for a later year group, while teachers of lower sets may need to draw on objectives in the teaching programmes from a previous year group. As always, the success of setting depends on teachers in the mathematics department being involved in careful monitoring, close teamwork and co-operative planning to make sure that expectations for all pupils are suitably high and that lower expectations are not justified simply because pupils are in a lower set.

There are some secondary schools where, at present, relatively few pupils attain level 5 or above at the end of Key Stage 3. Pupils may lack a secure understanding of some of the work they have been taught earlier. To begin with, these schools should look carefully at the programmes for Year 5 and Year 6 and draw suitable teaching objectives from them when they are planning work for Year 7, making corresponding adjustments for Years 8 and 9. A decision like this would need to be reviewed before the start of the next school year to allow for improving standards over time.

How the plans are set out

Teaching objectives for oral and mental activities are placed at the beginning of the plan for each term. Objectives for the main activities are set out in four columns:

- The first identifies the areas of mathematics studied in the unit and identifies links to the supplement of examples in the Framework.
- The second identifies support objectives from previous yearly teaching programmes, as in Springboard 7. These are linked to the core objectives for each unit.
- The third column sets out the core objectives for the year group, the ones you would expect to focus on for the majority of pupils.
- The fourth provides extension objectives, to stretch able pupils, drawn from the next year’s teaching programme. These are linked to the core objectives for the unit.

Teaching objectives for the oral and mental activities

- Read and write whole numbers in figures and words.
- Multiply and divide whole numbers by 10, 100, 1000.
- Count on and back in steps of 0.1, 0.2, 0.25, ¼, …
- Round whole numbers to the nearest 10 or 100.
- Order, add and subtract positive and negative numbers in context.
- Recognise multiples and use simple tests of divisibility.
- Know pairs of factors of numbers to 100.
- Know or derive quickly prime numbers less than 30.
- Know or derive quickly squares to at least 12 × 12 and the corresponding roots.
- Convert between fractions, decimals and percentages.
- Find simple fractions of quantities.
- Know addition and subtraction facts to 20 and whole number complements of 100.
- Find two decimals (one decimal place) with a sum of 1.
- Add and subtract several small numbers or several multiples of 10, e.g. 50 – 40 + 80 – 100.
- Add and subtract pairs of numbers, e.g. 76 ± 38, 760 ± 380.
- Find doubles and halves of numbers, e.g. 670, 5.6.
- Recall multiplication facts to 10 × 10 and derive associated division facts.
- Multiply and divide a two-digit number by a one-digit number.
- Visualise, describe and sketch 2-D shapes in different orientations.
- Estimate and order acute and obtuse angles.
- Use metric units (length, mass, capacity) and units of time for calculations.
- Use metric units for estimation (length, mass, capacity).
- Convert between m, cm and mm, km and m, kg and g, litres and ml.
- Know rough metric equivalents of common imperial units.
- Apply mental skills to solve simple problems.

Teaching objectives for the main activities

<table>
<thead>
<tr>
<th>SUPPORT From the Y5 and Y6 teaching programmes</th>
<th>CORE From the Y7 teaching programme</th>
<th>EXTENSION From the Y8 teaching programme</th>
</tr>
</thead>
</table>
| **Algebra 1 (6 hours)** Sequences and functions (144–163) | • Recognise and extend number sequences formed by counting from any number in steps of constant size, extending beyond zero when counting back.  
  • Know squares to at least 10 × 10. | • Generate and describe simple integer sequences.  
  • Generate terms of a simple sequence, given a rule (e.g. finding a term from the previous term, finding a term given its position in the sequence).  
  • Generate sequences from practical contexts and describe the general term in simple cases.  
  • Express simple functions in words, then using symbols; represent them in mappings.  
  • Use letter symbols to represent unknown numbers or variables.  
  • Suggest extensions to problems by asking ‘What if…?’; begin to generalise and to understand the significance of a counter-example. | • Generate terms of a linear sequence using term-to-term and position-to-term definitions of the sequence, on paper and using a spreadsheet or graphical calculator.  
  • Begin to use linear expressions to describe the nth term of an arithmetic sequence.  
  • Represent mappings expressed algebraically. |
<p>| <strong>Formulae and identities (112–113)</strong> |  |  |
| <strong>Solving problems (32–35)</strong> |  |  |</p>
<table>
<thead>

</tr>
</thead>
</table>
| **Number 1 (6 hours)**  
Place value (36–41) | • Read and write whole numbers in figures and words.  
• Use decimal notation for tenths and hundredths; know what each digit represents in numbers with up to two decimal places. | • Understand and use decimal notation and place value; multiply and divide integers and decimals by 10, 100, 1000, and explain the effect. | • Add, subtract, multiply and divide integers.  
• Recall known facts, including fraction to decimal conversions; use known facts to derive unknown facts, including products such as 0.7 and 6, and 0.03 and 8. |
| **Integers (48–51)** | • Calculate a temperature rise and fall across 0 °C.  
• Know squares to at least 10 × 10. | • Compare and order decimals in different contexts; know that when comparing measurements they must be in the same units.  
• Understand negative numbers as positions on a number line; order, add and subtract positive and negative integers in context.  
• Consolidate the rapid recall of number facts, including positive integer complements to 100 and multiplication facts to 10 × 10, and quickly derive associated division facts.  
• Make and justify estimates and approximations of calculations.  
• Use standard column procedures to add and subtract whole numbers and decimals with up to two places.  
• Enter numbers and interpret the display in different contexts (decimals, money).  
• Solve word problems and investigate in a range of contexts: number; compare and evaluate solutions. | |
| Calculations (88–91, 102–105) | • Use informal pencil and paper methods to support, record or explain additions and subtractions. | • Solve word problems and investigate in a range of contexts: length, perimeter and area. | |
| **Calculator methods (108–109)**  
Solving problems (2–11) | • Develop calculator skills and use a calculator effectively. | • Solve word problems and investigate in a range of contexts: number; compare and evaluate solutions. | |
| **Shape, space and measures 1 (4 hours)**  
Mensuration (198–201, 228–231, 234–241) | • Identify different nets for an open cube.  
• Measure and draw lines to the nearest millimetre.  
• Record estimates and readings from scales to a suitable degree of accuracy.  
• Understand that area is measured in square centimetres (cm²).  
• Understand, measure and calculate perimeters of rectangles and regular polygons. | • Use 2-D representations to visualise 3-D shapes and deduce some of their properties.  
• Use names and abbreviations of units of measurement to measure, estimate, calculate and solve problems in everyday contexts involving length, area.  
• Know and use the formula for the area of a rectangle; calculate the perimeter and area of shapes made from rectangles.  
• Calculate the surface area of cubes and cuboids.  
• Solve word problems and investigate in a range of contexts: length, perimeter and area. | • Make simple scale drawings.  
• Deduce and use formulae for the area of a triangle, parallelogram and trapezium.  
• Know and use the formula for the volume of a cuboid. |
<table>
<thead>
<tr>
<th>SUPPORT From the Y5 and Y6 teaching programmes</th>
<th>CORE From the Y7 teaching programme</th>
<th>EXTENSION From the Y8 teaching programme</th>
</tr>
</thead>
</table>
| **Number 2 (6 hours)** Fractions, decimals, percentages (60–77) | • Change an improper fraction to a mixed number; recognise when two simple fractions are equivalent, including relating hundredths to tenths.  
• Use decimal notation for tenths and hundredths. | • Know that a recurring decimal is a fraction; use division to convert a fraction to a decimal; order fractions by converting them to decimals.  
• Calculate fractions of quantities and measurements (fraction answers); multiply and divide an integer by a fraction.  
• Find the outcome of a given percentage increase or decrease.  
• Recall fraction to decimal conversions. |
| Calculations (92–101, 110–111) | • Find a difference by counting up through the next multiple of 10, 100 or 1000.  
• Add and subtract mentally pairs of two-digit numbers. | |
| Solving problems (28–31) | • Check a result by considering whether it is of the right order of magnitude and by working the problem backwards.  
• Break a complex calculation into simpler steps, choosing and using appropriate and efficient operations, methods and resources, including ICT.  
• Present and interpret solutions in the context of the original problem; explain and justify methods and conclusions, orally and in writing. | |
| **Handling data 1 (6 hours)** Handling data (256–261, 268–271) | • Solve a problem by representing, extracting and interpreting data in tables, graphs, charts and diagrams, for example: - line graphs; - frequency tables and bar charts. | • Recognise when it is appropriate to use the range, mean, median and mode; calculate a mean using an assumed mean.  
• Know that if the probability of an event occurring is \( p \), then the probability of it not occurring is \( 1 - p \); find and record all possible mutually exclusive outcomes for two successive events in a systematic way, using diagrams and tables. |
| Probability (276–283) | • Calculate statistics for small sets of discrete data: - find the mode, median and range, and the modal class for grouped data; - calculate the mean, including from a simple frequency table, using a calculator for a larger number of items.  
• Interpret diagrams and graphs (including pie charts), and draw conclusions based on the shape of graphs and simple statistics for a single distribution.  
• Use vocabulary and ideas of probability, drawing on experience.  
• Understand and use the probability scale from 0 to 1; find and justify probabilities based on equally likely outcomes in simple contexts; identify all the possible mutually exclusive outcomes of a single event.  
• Collect data from a simple experiment and record in a frequency table; estimate probabilities based on this data. | |

YEAR 7: SPRING TERM

Teaching objectives for the oral and mental activities

- Read and write whole numbers in figures and words.
- Multiply and divide decimals by 10, 100, 1000.
- Count on and back in steps of 0.4, 0.75, ¾….
- Order decimals in different contexts.
- Round decimals to the nearest whole number.
- Order, add and subtract integers.
- Recognise multiples and use tests of divisibility.
- Know pairs of factors of numbers to 100.
- Know or derive quickly prime numbers less than 30.
- Know or derive quickly squares to at least 12 × 12 and the corresponding roots.
- Find simple equivalent fractions.
- Know whole-number complements of 50 and 100.
- Find two decimals with a sum of 1 or 0.1 (two decimal places).
- Add several small numbers and find their mean.
- Add and subtract pairs of numbers, e.g. 7.6 ± 3.8, 760 ± 380.
- Find doubles and halves of numbers, e.g. 6500, 0.76, ½.
- Recall multiplication and division facts to 10 × 10.
- Derive answers to calculations, e.g. 60 × 80, 0.4 × 9.
- Multiply and divide a two-digit number by a one-digit number.
- Visualise, describe and sketch 2-D shapes.
- Estimate and order acute and obtuse angles.
- Use metric units (length and area) and units of time for calculations.
- Calculate perimeter and area of rectangles.
- Discuss and interpret graphs.
- Apply mental skills to solve simple problems.

| - Understand and use the relationships between the four operations, and the principles (not the names) of the arithmetic laws.  
- Know multiplication facts up to 10 × 10.  
- Add several numbers.  
- Use doubling and halving.  
- Partition to multiply mentally TU × U.  
- Extend written methods to:  
  - HTU × U and U.T × U;  
  - TU × TU;  
  - HTU ÷ U.  
- Divide £.p by a two-digit number to give £.p.  
- Round up or down after division, depending on the context.  
- Develop calculator skills and use a calculator effectively.  
- Use, read and write standard metric units of length, mass and capacity.  
- Suggest suitable units and measuring equipment to estimate or measure length, mass or capacity.  
- Use all four operations to solve word problems, including time. | - Round positive whole numbers to the nearest 10, 100 or 1000 and decimals to the nearest whole number or one decimal place.  
- Understand addition, subtraction, multiplication and division as they apply to whole numbers and decimals; know how to use the laws of arithmetic and inverse operations.  
- Know and use the order of operations, including brackets.  
- Consolidate and extend mental methods of calculation to include decimals, fractions and percentages, accompanied where appropriate by suitable jottings; solve simple word problems mentally.  
- Make and justify estimates and approximations of calculations.  
- Multiply and divide three-digit by two-digit whole numbers; extend to multiplying and dividing decimals with one or two places by single-digit whole numbers. | - Round positive numbers to any given power of 10; round decimals to the nearest whole number or to one or two decimal places.  
- Recall products such as 0.7 and 6, and 0.03 and 8.  
- Multiply and divide integers and decimals including by decimals such as 0.6 and 0.06; understand where to position the decimal point by considering equivalent calculations.  
- Know rough metric equivalents of imperial measures in daily use.  
- Give solutions to an appropriate degree of accuracy in the context of the problem. |

<tr>
<td><strong>Number 4 (5 hours)</strong> Fractions, decimals, percentages, ratio and proportion (70–81)</td>
<td>• Relate fractions to division. • Find simple fractions of whole-number quantities. • Find simple percentages of whole-number quantities. • Solve simple problems using ideas of ratio and proportion (‘one for every…’ and ‘one in every…’).</td>
<td>• Express one given number as a percentage of another; use the equivalence of fractions, decimals and percentages to compare proportions. • Divide a quantity into two or more parts in a given ratio; use the unitary method to solve simple word problems involving ratio and direct proportion.</td>
</tr>
<tr>
<td>Calculations (110–111)</td>
<td>• Recognise the equivalence of percentages, fractions and decimals; calculate simple percentages and use percentages to compare simple proportions. • Understand the relationship between ratio and proportion; use direct proportion in simple contexts; use ratio notation, reduce a ratio to its simplest form and divide a quantity into two parts in a given ratio; solve simple problems about ratio and proportion using informal strategies. • Check a result by considering whether it is of the right order of magnitude and by working the problem backwards.</td>
<td></td>
</tr>
<tr>
<td><strong>Algebra 4 (4 hours)</strong> Equations, formulae and identities (112–125)</td>
<td>• Use letter symbols to represent unknown numbers or variables; know the meanings of the words <em>term</em>, <em>expression</em> and <em>equation</em>. • Understand that algebraic operations follow the same conventions and order as arithmetic operations. • Simplify linear algebraic expressions by collecting like terms; begin to multiply a single term over a bracket (integer coefficients). • Construct and solve simple linear equations with integer coefficients (unknown on one side only) using an appropriate method (e.g. inverse operations).</td>
<td>• Begin to distinguish between the different roles played by letter symbols in equations, formulae and functions; know the meanings of the words <em>formula</em> and <em>function</em>. • Construct and solve linear equations with integer coefficients (unknown on either or both sides, without and with brackets) using appropriate methods (e.g. inverse operations, transforming both sides in the same way).</td>
</tr>
</tbody>
</table>
Teaching objectives for the oral and mental activities

- Multiply and divide decimals by 10, 100, 1000 and small multiples of 10.
- Round numbers, including to one or two decimal places.
- Order decimals and simple fractions in different contexts.
- Recognise multiples and use tests of divisibility.
- Know pairs of factors of numbers to 100.
- Know or derive quickly prime numbers less than 30.
- Know or derive squares to at least 12 × 12, multiples of 10, 0.1 to 0.9 and corresponding square roots.
- Convert between fractions, decimals and percentages.
- Find fractions and percentages of quantities.
- Know complements of 0.1, 1, 10, 50, 100.
- Add and subtract pairs of numbers, e.g. 0.65 + 3.8, 765 + 47.
- Use jottings to support addition and subtraction of whole numbers and decimals.
- Find doubles and halves of decimals and fractions.
- Recall multiplication and division facts to 10 × 10.
- Use doubling and halving to calculate, e.g. 6 × 4.5, 1.38 × 50.
- Use factors to multiply and divide mentally, e.g. 35 × 12, 144 ÷ 36, 3.2 × 30.
- Derive answers to calculations, e.g. 0.4 × 9, 0.7 × 0.9.
- Multiply and divide a two-digit number by a one-digit number.
- Use approximations to estimate the answers to calculations, e.g. 39 × 2.8.
- Solve equations such as 100 = x + 37.
- Visualise and describe 2-D and 3-D shapes.
- Estimate and order acute, obtuse and reflex angles.
- Use metric units (length, mass, capacity) and units of time for calculations.
- Convert between m, cm and mm, km and m, kg and g, litres and ml.
- Convert between metric and common imperial units.
- Discuss and interpret graphs.
- Apply mental skills to solve simple problems.

Teaching objectives for the main activities

</tr>
<tr>
<td><strong>Shape, space and measures 4</strong>&lt;br&gt;(6 hours)&lt;br&gt;Transformations&lt;br&gt;(202–212)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• Recognise reflection symmetry.&lt;br&gt;• Recognise where a shape will be after reflection.&lt;br&gt;• Recognise where a shape will be after a translation.</td>
<td>• Understand and use the language and notation associated with reflections, translations and rotations.&lt;br&gt;• Recognise and visualise the transformation and symmetry of a 2-D shape:&lt;br&gt;  - reflection in given mirror lines, and line symmetry;&lt;br&gt;  - rotation about a given point, and rotation symmetry;&lt;br&gt;  - translation;&lt;br&gt;  - explore these transformations and symmetries using ICT.</td>
<td>• Transform 2-D shapes by simple combinations of rotations, reflections and translations, on paper and using ICT; identify all the symmetries of 2-D shapes.</td>
</tr>
<tr>
<td><strong>Solving problems</strong>&lt;br&gt;(14–17, 32–35)</td>
<td>• Solve word problems and investigate in a range of contexts: shape and space.&lt;br&gt;• Suggest extensions to problems by asking ‘What if...?’; begin to generalise and to understand the significance of a counter-example.</td>
<td>• Understand and use the language and notation associated with enlargement; enlarge 2-D shapes, given a centre of enlargement and a positive whole-number scale factor.</td>
</tr>
</tbody>
</table>
### Handling data 3 (8 hours)

**Handling data**

(250–273)

- Find the mode and range of a set of data.
- Begin to find the median and the mean of a set of data.

**Solve a problem by** representing, extracting and interpreting data in tables, graphs and charts.

### Probability

(278–285)

- Decide which data would be relevant to an enquiry and possible sources.
- Plan how to collect and organise small sets of data; design a data collection sheet or questionnaire to use in a simple survey; construct frequency tables for discrete data, grouped where appropriate in equal class intervals.
- Calculate statistics for small sets of discrete data:
  - find the mode, median and range, and the modal class for grouped data;
  - calculate the mean, including from a simple frequency table, using a calculator for a larger number of items.
- Construct, on paper and using ICT, graphs and diagrams to represent data, including:
  - bar-line graphs;
  - frequency diagrams for grouped discrete data; use ICT to generate pie charts.
- Interpret diagrams and graphs (including pie charts), and draw conclusions based on the shape of graphs and simple statistics for a single distribution.
- Compare two simple distributions using the range and one of the mode, median or mean.
- Write a short report of a statistical enquiry and illustrate with appropriate diagrams, graphs and charts, using ICT as appropriate; justify the choice of what is presented.
- **Understand and use the probability scale from 0 to 1; find and justify probabilities based on equally likely outcomes in simple contexts; identify all the possible mutually exclusive outcomes of a single event.**
- Collect data from a simple experiment and record in a frequency table; estimate probabilities based on this data.
- Compare experimental and theoretical probabilities in simple contexts.

### SUPPORT

From the Y5 and Y6 teaching programmes

### CORE

From the Y7 teaching programme

### EXTENSION

From the Y8 teaching programme

- Recognise when it is appropriate to use the range, mean, median and mode and, for grouped data, the modal class; calculate a mean using an assumed mean.
- **Construct on paper and using ICT:**
  - pie charts for categorical data;
  - simple line graphs for time series.
- Interpret tables, graphs and diagrams for both discrete and continuous data.
- Know that if the probability of an event occurring is $p$, then the probability of it not occurring is $1 - p$; find and record all possible mutually exclusive outcomes for two successive events in a systematic way, using diagrams and tables.
- Understand that:
  - if an experiment is repeated there may be, and usually will be, different outcomes;
  - increasing the number of times an experiment is repeated generally leads to better estimates of probability.

<td></td>
<td>• Break a complex calculation into simpler steps, choosing and using appropriate and efficient operations, methods and resources, including ICT.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Calculate fractions of quantities and measurements (fraction answers); multiply and divide an integer by a fraction.</td>
</tr>
</tbody>
</table>
### SUPPORT
From the Y5 and Y6 teaching programmes

**Algebra 5** (8 hours)
Equations, formulae and identities
(122–143)

- Understand and use the relationships between the four operations, and the principles (not the names) of the arithmetic laws. Use brackets.

**Sequences, functions and graphs**
(154–177)

- Read and plot coordinates in all four quadrants.

**Solving problems**
(32–35)

- Recognise reflection symmetry.
- Recognise where a shape will be after reflection.
- Calculate angles on a straight line, in a triangle, or around a point.
- Use a protractor to measure and draw acute and obtuse angles to the nearest degree.
- Visualise 3-D shapes from 2-D drawings and identify different nets for a closed cube.

### CORE
From the Y7 teaching programme

**Shape, space and measures 5**
(6 hours)
Geometrical reasoning: lines, angles and shapes
(184–212)

- Begin to identify and use angle, side and symmetry properties of triangles and quadrilaterals; solve geometrical problems involving these properties, using step-by-step deduction and explaining reasoning with diagrams and text.
- Explore transformations and symmetries using ICT.
- Use a ruler and protractor to:
  - construct a triangle given two sides and the included angle (SAS) or two angles and the included side (ASA);
  - construct simple nets of 3-D shapes, e.g. cuboid, regular tetrahedron, square-based pyramid, triangular prism.

### EXTENSION
From the Y8 teaching programme

**Algebra 5** (8 hours)
Equations, formulae and identities
(122–143)

- Construct and solve simple linear equations with integer coefficients (unknown on one side only) using an appropriate method (e.g. inverse operations).
- Use simple formulae from mathematics and other subjects, substitute positive integers in simple linear expressions and formulae and, in simple cases, derive a formula.
- Generate sequences from practical contexts and describe the general term in simple cases.
- Express simple functions (in words, then) using symbols; represent them in mappings.
- Generate coordinate pairs that satisfy a simple linear rule; plot the graphs of simple linear functions, where y is given explicitly in terms of x, on paper and using ICT; recognise straight-line graphs parallel to the x-axis or y-axis.
- Solve geometrical problems using side and angle properties of equilateral, isosceles and right-angled triangles and special quadrilaterals.

**Substitute integers into simple formulae**, including examples that lead to an equation to solve, and positive integers into expressions involving small powers (e.g. $3x^2 + 4$ or $2x^3$).
- Begin to use linear expressions to describe the nth term of an arithmetic sequence.
- Generate points in all four quadrants and plot the graphs of linear functions; recognise that equations of the form $y = mx + c$ correspond to straight-line graphs.

**Construction**
(220–223)

- Use a protractor to measure and draw acute and obtuse angles to the nearest degree.
- Use a ruler and protractor to:
  - construct a triangle given two sides and the included angle (SAS) or two angles and the included side (ASA);
  - construct simple nets of 3-D shapes, e.g. cuboid, regular tetrahedron, square-based pyramid, triangular prism.
- Visualise 3-D shapes from 2-D drawings and identify different nets for a closed cube.
- Use a ruler and protractor to construct simple nets of 3-D shapes, e.g. cuboid, regular tetrahedron, square-based pyramid, triangular prism.

**Using and applying mathematics to solve problems should be integrated into each unit**

35 weeks 105 hours
### Teaching objectives for the oral and mental activities

- Order, add, subtract, multiply and divide integers.
- Multiply and divide decimals by 10, 100, 1000.
- Count on and back in steps of 0.4, 0.75, \( \frac{3}{4} \), ....
- Round numbers, including to one or two decimal places.
- Know and use squares, positive and negative square roots, cubes of numbers 1 to 5 and corresponding roots.
- Convert between fractions, decimals and percentages.
- Find fractions and percentages of quantities.
- Know or derive complements of 0.1, 1, 10, 50, 100, 1000.
- Add and subtract several small numbers or several multiples of 10, e.g. 250 + 120 – 190.
- Use jottings to support addition and subtraction of whole numbers and decimals.
- Calculate using knowledge of multiplication and division facts and place value, e.g. 432 \( \times \) 0.01, 37 \( \div \) 0.01.
- Recall multiplication and division facts to 10 \( \times \) 10.
- Use factors to multiply and divide mentally, e.g. 22 \( \times \) 0.02, 420 \( \div \) 15.
- Multiply and divide a two-digit number by a one-digit number.
- Use partitioning to multiply, e.g. 13 \( \times \) 1.4.
- Use approximations to estimate the answers to calculations, e.g. 39 \( \times \) 2.8.
- Solve equations, e.g. 3a – 2 = 31.
- Visualise, describe and sketch 2-D shapes.
- Estimate and order acute, obtuse and reflex angles.
- Use metric units (length, mass, capacity) and units of time for calculations.
- Use metric units for estimation (length, mass, capacity).
- Convert between m, cm and mm, km and m, kg and g, litres and ml, cm\(^2\) and mm\(^2\).
- Discuss and interpret graphs.
- Apply mental skills to solve simple problems.

## YEAR 8: SPRING TERM

### Teaching objectives for the oral and mental activities

- Order, add, subtract, multiply and divide integers.
- Round numbers, including to one or two decimal places.
- Know and use squares, positive and negative square roots, cubes of numbers 1 to 5 and corresponding roots.
- Know or derive quickly prime numbers less than 30.
- Convert between improper fractions and mixed numbers.
- Find the outcome of a given percentage increase or decrease.
- Know complements of 0.1, 1, 10, 50, 100, 1000.
- Add and subtract several small numbers or several multiples of 10, e.g. 250 + 120 – 190.
- Calculate using knowledge of multiplication and division facts and place value, e.g. $432 \times 0.01$, $37 \div 0.01$, $0.04 \times 8$, $0.03 \div 5$.
- Recall multiplication and division facts to 10.$\times$10.
- Use factors to multiply and divide mentally, e.g. $22 \times 0.02$, $420 \div 15$.
- Multiply and divide a two-digit number by a one-digit number.
- Multiply by near 10s, e.g. $75 \times 29$, $8 \times 19$.
- Use partitioning to multiply, e.g. $13 \times 1.4$.
- Use approximations to estimate the answers to calculations, e.g. $39 \times 2.8$.
- Solve equations, e.g. $n(n - 1) = 56$.
- Visualise, describe and sketch 2-D shapes, 3-D shapes and simple loci.
- Estimate and order acute, obtuse and reflex angles.
- Use metric units (length, area and volume) and units of time for calculations.
- Use metric units for estimation (length, area and volume).
- Recall and use the formula for perimeter of rectangles and calculate areas of rectangles and triangles.
- Calculate volumes of cuboids.
- Discuss and interpret graphs.
- Apply mental skills to solve simple problems.

### Teaching objectives for the main activities

<table>
<thead>
<tr>
<th>SUPPORT From the Y7 teaching programme</th>
<th>CORE From the Y8 teaching programme</th>
<th>EXTENSION From the Y9 teaching programme</th>
</tr>
</thead>
</table>
| **Algebra 3** (6 hours) Sequences, functions, graphs (160–177) | • Express simple functions in symbols; represent mappings expressed algebraically.  
• Generate points in all four quadrants and plot the graphs of linear functions, where $y$ is given explicitly in terms of $x$, on paper and using ICT; recognise that equations of the form $y = mx + c$ correspond to straight-line graphs.  
• Construct linear functions arising from real-life problems and plot their corresponding graphs; discuss and interpret graphs arising from real situations. | • Find the inverse of a linear function.  
• Plot graphs of linear functions ($y$ given implicitly in terms of $x$), e.g. $ay + bx = 0$, $y + bx + c = 0$, on paper and using ICT; given values for $m$ and $c$, find the gradient of lines given by equations of the form $y = mx + c$.  
• Discuss and interpret distance–time graphs. |
| • Express simple functions in words.  
• Generate coordinate pairs that satisfy a simple linear rule; recognise straight-line graphs parallel to the $x$-axis or $y$-axis. |

Sample medium-term plans for mathematics
**Teaching objectives for the oral and mental activities**

- Order, add, subtract, multiply and divide integers.
- Multiply and divide decimals by 10, 100, 1000, 0.1, 0.01.
- Round numbers, including to one or two decimal places.
- Know and use squares, cubes, roots and index notation.
- Know or derive prime factorisation of numbers to 30.
- Convert between fractions, decimals and percentages.
- Find the outcome of a given percentage increase or decrease.
- Know complements of 0.1, 1, 10, 50, 100.
- Add and subtract several small numbers or several multiples of 10, e.g. 250 + 120 – 190.
- Use jottings to support addition and subtraction of whole numbers and decimals.
- Calculate using knowledge of multiplication and division facts and place value, e.g. \( 432 \times 0.01, 37 \div 8, 0.03 \div 5 \).
- Recall multiplication and division facts to 10 \( \times 10 \).
- Use factors to multiply and divide mentally, e.g. 22 \( \times 0.02, 420 \div 8 \).
- Multiply by near 10s, e.g. 75 \( 29, 8 \).
- Use factors to multiply and divide mentally, e.g. 22 \( \times 0.02, 420 \div 8 \).
- Use metric units for estimation (length, mass, capacity, area and volume) and units of time for calculations.
- Use metric units for estimation (length, mass, capacity, area and volume).
- Convert between m, cm and mm, km and m, kg and g, litres and ml, cm\(^2\) and mm\(^2\).
- Discuss and interpret graphs.
- Calculate a mean using an assumed mean.
- Apply mental skills to solve simple problems.

### Support

#### Number 4 (6 hours)

**Calculations**

- Consolidate and extend mental methods of calculation to include decimals, fractions and percentages, accompanied where appropriate by suitable jottings.

- Multiply and divide three-digit by two-digit whole numbers; extend to multiplying and dividing decimals with one or two places by single-digit whole numbers.

- Convert one metric unit to another (e.g. grams to kilograms).

#### Measures

- (228–231)

YEAR 9: AUTUMN TERM

Teaching objectives for the oral and mental activities

- Order, add, subtract, multiply and divide integers.
- Multiply and divide decimals by 10, 100, 1000, 0.1 and 0.01.
- Count on and back in steps of 0.4, 0.75, \(\frac{3}{4}\),...
- Round numbers, including to one or two decimal places.
- Know and use squares, cubes, roots and index notation.
- Know or derive quickly prime numbers less than 30 and factor pairs for a given number.
- Convert between fractions, decimals and percentages.
- Know that 0.005 is half of one per cent.
- Find fractions and percentages of quantities.
- Know or derive complements of 0.1, 1, 10, 50, 100, 1000.
- Add and subtract several small numbers or several multiples of 10, e.g. 250 + 120 – 190.
- Use jottings to support addition and subtraction of whole numbers and decimals.
- Use knowledge of place value to multiply and divide, e.g. \(432 \times 0.01, 37 \div 0.01, 0.04 \times 8, 0.03 \div 5, 13 \times 1.4\).
- Recall multiplication and division facts to 10 x 10. Derive products and quotients of multiples of 10, 100, 1000.
- Use factors to multiply and divide mentally, e.g. \(22 \times 0.02, 420 \div 15\).
- Multiply and divide a two-digit number by a one-digit number.
- Use approximations to estimate the answers to calculations, e.g. \(39 \times 2.8\).
- Solve equations, e.g. \(n(n – 1) = 56, \frac{y}{x} = -46\).
- Visualise, describe and sketch 2-D shapes.
- Recall and use formulae for the perimeter of a rectangle, and areas of rectangles and triangles.
- Calculate volumes of cuboids.
- Estimate and order acute, obtuse and reflex angles.
- Use metric units (length, mass, capacity) and units of time for calculations.
- Use metric units for estimation (length, mass, capacity).
- Convert between metric units, including area, volume and capacity measures.
- Discuss and interpret graphs.
- Calculate a mean using an assumed mean.
- Apply mental skills to solve simple problems.

### SUPPORT
From the Y8 teaching programme

#### Number 1 (9 hours)
Proportional reasoning, including:
- Fractions, decimals, percentages, ratio and proportion (66–81)

- Order decimals.
- Add and subtract fractions by writing them with a common denominator; calculate fractions of quantities (fraction answers); multiply and divide an integer by a fraction.
- Interpret percentage as the operator 'so many hundredths of'; express one given number as a percentage of another.
- Reduce a ratio to its simplest form, including a ratio expressed in different units; divide a quantity into two or more parts in a given ratio; use the unitary method to solve simple word problems involving ratio and direct proportion.
- Recall known facts, including fraction to decimal conversions.
- Round positive numbers to any given power of 10 and decimals to the nearest whole number, 1 or 2 decimal places.

#### Calculations
(82–103, 110–111)
- Estimate calculations by rounding numbers to one significant figure and multiplying or dividing mentally.

### CORE
From the Y9 teaching programme

- Use efficient methods to add, subtract, multiply and divide fractions, interpreting division as a multiplicative inverse; cancel common factors before multiplying or dividing.
- Recognise when fractions or percentages are needed to compare proportions; solve problems involving percentage changes.
- Use proportional reasoning to solve a problem, choosing the correct numbers to take as 100%, or as a whole; compare two ratios; interpret and use ratio in a range of contexts, including solving word problems.
- Understand the effects of multiplying and dividing by numbers between 0 and 1; use the laws of arithmetic and inverse operations.
- Understand the order of precedence and effect of powers.
- Use known facts to derive unknown facts; extend mental methods of calculation, working with decimals, fractions, percentages, factors, powers and roots; solve word problems mentally.
- Make and justify estimates and approximations of calculations.
- Check results using appropriate methods.

### EXTENSION
From the Y9 objectives for able pupils

- Understand and use proportionality and calculate the result of any proportional change using only multiplicative methods; understand the implications of enlargement for area and volume.
- Recognise and use reciprocals.

### Algebra 3 (6 hours)
Equations, formulae and identities (112–113, 122–125, 132–137)

- Know the meanings of the words formula and function.
- Construct and solve linear equations with integer coefficients (unknown on either or both sides) using appropriate methods (e.g. inverse operations, transforming both sides in the same way).
- Begin to use graphs and set up equations to solve simple problems involving direct proportion.
- Distinguish the different roles played by letter symbols in equations, identities, formulae and functions.
- Construct and solve linear equations with integer coefficients (with and without brackets, negative signs anywhere in the equation, positive or negative solution) using an appropriate method.
- Use systematic trial and improvement methods and ICT tools to find approximate solutions of equations such as \( x^3 + x = 20 \).
- Solve problems involving direct proportion using algebraic methods, relating algebraic solutions to graphical representations of the equations; use ICT as appropriate.
- Solve a pair of simultaneous linear equations by eliminating one variable; link a graphical representation of an equation or a pair of equations to the algebraic solution; consider cases that have no solution or an infinite number of solutions.
### Key Stage 3 National Strategy

**Shape, space and measures 1**  
(9 hours)  
Geometrical reasoning: lines, angles and shapes  
(178–189, 194–197)

| • Identify alternate angles and corresponding angles; understand a proof that:  
  - the sum of the angles of a triangle is 180° and of a quadrilateral is 360°;  
  - the exterior angle of a triangle is equal to the sum of the two interior opposite angles.  
  
  • Solve geometrical problems using side and angle properties of equilateral, isosceles and right-angled triangles and special quadrilaterals, explaining reasoning with diagrams and text; classify quadrilaterals by their geometric properties.  
  
  • Use straight edge and compasses to construct:  
    - the mid-point and perpendicular bisector of a line segment;  
    - the bisector of an angle;  
    - the perpendicular from a point to a line;  
    - the perpendicular from a point on a line;  
    - construct a triangle, given three sides (SSS); use ICT to explore these constructions.  
  
  • Find the locus of a point that moves according to a simple rule, both by reasoning and by using ICT.  
  
  • Explore connections in mathematics across a range of contexts: shape and space.  
| • Distinguish between conventions, definitions and derived properties.  
  
  • Explain how to find, calculate and use:  
    - the sums of the interior and exterior angles of quadrilaterals, pentagons and hexagons,  
    - the interior and exterior angles of regular polygons.  
  
  • Solve problems using properties of angles, of parallel and intersecting lines, and of triangles and other polygons, justifying inferences and explaining reasoning with diagrams and text.  
  
  • Know the definition of a circle and the names of its parts; explain why inscribed regular polygons can be constructed by equal divisions of a circle.  
  
  • Use straight edge and compasses to construct a triangle, given right angle, hypotenuse and side (RHS); use ICT to explore constructions of triangles and other 2-D shapes.  
  
  • Find the locus of a point that moves according to a more complex rule, involving loci and simple constructions.  
| • Distinguish between practical demonstration and proof; know underlying assumptions, recognising their importance and limitations, and the effect of varying them.  
  
  • Understand and apply Pythagoras’ theorem.  
  
  • Know that the tangent at any point on a circle is perpendicular to the radius at that point; explain why the perpendicular from the centre to the chord bisects the chord.  
  
  • Know from experience of constructing them that triangles given SSS, SAS, ASA or RHS are unique, but that triangles given SSA or AAA are not.  

**Construction and loci**  
(220–227)

**Solving problems**  
(14–17)
### SUPPORT
From the Y8 teaching programme

- Decide which data to collect to answer a question, and the degree of accuracy needed; identify possible sources.
- Collect data using a suitable method, such as observation, controlled experiment, including data logging using ICT, or questionnaire.
- Calculate statistics, including with a calculator; recognise when it is appropriate to use the range, mean, median and mode.
- **Construct, on paper and using ICT:**
  - pie charts for categorical data;
  - bar charts and frequency diagrams for discrete data;
  - identify which are most useful in the context of the problem.
- Interpret tables, graphs and diagrams for discrete data and draw inferences that relate to the problem being discussed; relate summarised data to the questions being explored.
- Compare two distributions using the range and one or more of the mode, median and mean.

### CORE
From the Y9 teaching programme

- Suggest a problem to explore using statistical methods, frame questions and raise conjectures.
- Discuss how data relate to a problem; identify possible sources, including primary and secondary sources.
- Design a survey or experiment to capture the necessary data from one or more sources; determine the sample size and degree of accuracy needed; design, trial and if necessary refine data collection sheets; construct tables for large discrete and continuous sets of raw data, choosing suitable class intervals; design and use two-way tables.
- Find summary values that represent the raw data, and select the statistics most appropriate to the problem.
- Select, construct and modify, on paper and using ICT, suitable graphical representation to progress an enquiry, including:
  - line graphs for time series;
  - scatter graphs to develop further understanding of correlation;
  - identify key features present in the data.
- Interpret graphs and diagrams and draw inferences to support or cast doubt on initial conjectures; have a basic understanding of correlation.
- Compare two or more distributions and make inferences, using the shape of the distributions, the range of data and appropriate statistics.
- **Communicate interpretations and results of a statistical enquiry using selected tables, graphs and diagrams in support, using ICT as appropriate.**

### EXTENSION
From the Y9 objectives for able pupils

- **Identify possible sources of bias and plan how to minimise it.**
- Find the median and quartiles for large data sets; estimate the mean, median and interquartile range of a large set of grouped data.
- Select, construct and modify, on paper and using ICT, suitable graphical representation to progress an enquiry, including:
  - frequency polygons;
  - lines of best fit by eye, understanding what they represent.
- Analyse data to find patterns and exceptions, look for cause and effect and try to explain anomalies.
- Examine critically the results of a statistical enquiry, and justify choice of statistical representation in written presentations, recognising the limitations of any assumptions and their effect on conclusions drawn.
Teaching objectives for the oral and mental activities

- Order, add, subtract, multiply and divide integers.
- Find products of small integer powers.
- Know and use squares, cubes, roots and index notation.
- Know or derive quickly the prime factorisation of numbers to 30 and factor pairs for a given number.
- Find highest common factors (HCF) and lowest common multiples (LCM), e.g. the HCF of 36 and 48.
- Convert between improper fractions and mixed numbers. Simplify fractions by cancelling.
- Find the outcome of a given percentage increase or decrease.
- Know or derive complements of 0.1, 1, 10, 50, 100, 1000.
- Use jottings to support addition, subtraction, multiplication and division.
- Recall multiplication and division facts to 10 × 10. Derive products and quotients of multiples of 10, 100, 1000.
- Use known facts to derive unknown facts, e.g. derive 36 × 24 from 36 × 25.
- Use knowledge of place value to multiply and divide decimals by multiples of 0.1 and 0.01, e.g. 0.24 × 0.4, 720 ÷ 0.03.

Teaching objectives for the main activities

**SUPPORT**  From the Y8 teaching programme

- Given the coordinates of points A and B, find the midpoint of the line segment AB.
- Know rough metric equivalents of imperial measures in daily use (feet, miles, pounds, pints, gallons).
- Deduce and use formulae for the area of a triangle, parallelogram and trapezium; calculate areas of compound shapes made from rectangles and triangles.
- Know and use the formulae for the volume of a cuboid; calculate volumes and surface areas of cuboids and shapes made from cuboids.

**CORE**  From the Y9 teaching programme

- Use units of measurement to calculate, estimate, measure and solve problems in a variety of contexts; convert between area measures (mm\(^2\) to cm\(^2\), cm\(^2\) to m\(^2\), and vice versa) and between volume measures (mm\(^3\) to cm\(^3\), cm\(^3\) to m\(^3\), and vice versa).
- Know and use the formulae for the circumference and area of a circle.
- Calculate the surface area and volume of right prisms.

**EXTENSION**  From the Y9 objectives for able pupils

- Find points that divide a line in a given ratio, using the properties of similar triangles; given the coordinates of points A and B, calculate the length of AB.
- Recognise that measurements given to the nearest whole unit may be inaccurate by up to one half of the unit in either direction.
- Understand and use measures of speed (and other compound measures such as density or pressure) to solve problems; solve problems involving constant or average rates of change.
- Know and use the formulae for length of arcs and area of sectors of circles.
- Calculate lengths, areas and volumes in right prisms, including cylinders.

Teaching objectives for the oral and mental activities

- Order, add, subtract, multiply and divide integers.
- Round integers and decimals.
- Know and use squares, cubes, roots and index notation.
- Find highest common factors (HCF) and lowest common multiples (LCM).
- Convert between fractions, decimals and percentages, and between improper fractions and mixed numbers.
- Find fractions and percentages of quantities and the outcome of a given percentage increase or decrease.
- Know or derive complements of 0.1, 1, 10, 50, 100, 1000.
- Use jottings to support addition, subtraction, multiplication and division.
- Recall multiplication and division facts to 10 × 10. Derive products and quotients of multiples of 10, 100, 1000.
- Use knowledge of place value to multiply and divide decimals by 0.1 and 0.01, e.g. 0.24 × 0.4, 720 ÷ 0.03.
- Use approximations to estimate the answers to calculations, e.g. 0.39 × 2.8.
- Solve equations, e.g. \( n(n - 1) = 56 \), \( 7 + 7 = 46 \), \( (3 + x)^2 = 25 \), \( (12 - x)^2 = 49 \), \( \frac{7}{4} \times \frac{5}{11} = 0.008 \).
- Visualise, describe and sketch 2-D shapes, 3-D shapes and simple loci.
- Know and use squares, cubes, roots and index notation.
- Find the highest common factor (HCF) and lowest common multiple (LCM).
- Convert between fractions, decimals and percentages, and between improper fractions and mixed numbers.
- Find fractions and percentages of quantities and the outcome of a given percentage increase or decrease.
- Know or derive complements of 0.1, 1, 10, 50, 100, 1000.
- Use jottings to support addition, subtraction, multiplication and division.
- Recall multiplication and division facts to 10 × 10. Derive products and quotients of multiples of 10, 100, 1000.
- Use knowledge of place value to multiply and divide decimals by 0.1 and 0.01, e.g. 0.24 × 0.4, 720 ÷ 0.03.
- Use approximations to estimate the answers to calculations, e.g. 0.39 × 2.8.
- Simplify or transform linear expressions by collecting like terms; multiply a single term over a bracket.
- Simplify or transform algebraic expressions by taking out single-term common factors.
- Use formulae from mathematics and other subjects; substitute numbers into expressions and formulae; derive a formula and, in simple cases, change its subject.
- Generate points and plot graphs of linear functions (y given implicitly in terms of x), e.g. \( ay + bx = 0 \), \( y + bx + c = 0 \), on paper and using ICT.
- Solve increasingly demanding problems; explore connections in mathematics across a range of contexts: algebra.
- Square a linear expression, expand the product of two linear expressions of the form \( x \pm n \) and simplify the corresponding quadratic expression; establish identities such as \( a^2 - b^2 = (a + b)(a - b) \).
- Solve linear inequalities in one variable, and represent the solution set on a number line; begin to solve inequalities in two variables.
- Derive and use more complex formulae, and change the subject of a formula.

Planning for mathematics presents a particular challenge to teachers in secondary special schools as pupils’ different rates of progress are likely to have resulted in a wide range of attainment. Some special schools and units will adapt the mainstream plans. The following pages show examples of medium-term plans trialled by special schools where the range of attainment is wide, with some pupils having complex learning difficulties and almost all are working below age-related expectations of the National Curriculum in mathematics. The principle used was to start from the main yearly teaching programme and to ‘track back’ to appropriate objectives, thus maintaining the principle of the class working on similar topics.

The **Framework for teaching mathematics: Years 7, 8 and 9** offers example planning charts for each year. These show one way of covering the curriculum for all pupils. Topics such as ‘sequences and functions’, ‘transformations’ and ‘probability’ may appear to be inaccessible to many pupils with special needs. The following medium-term plans indicate how planning might be adapted to allow pupils in special schools to access the mathematics curriculum to which they are entitled.

**Example**

Planning for a Year 7 class needs to address the needs of pupils working at:

- Levels P1 to P3;
- Levels P4 to P8;
- National Curriculum levels 1 and 2;
- National Curriculum levels 3, 4 and above.

One possible approach might be to use the optional Year 7 planning chart and the Year 7 sample medium-term plan as a basis for planning. The following sample units show how a teacher might track back along the strands through Year 6, Year 5… to Year 1 objectives and then refer to the P scales.

The timing and balance of topics may need to be altered to meet pupils’ particular needs.

All pupils in the class could be working on the same topic, providing opportunities for whole-class activity at the beginning and end of lessons and for class, group or individual work in the main part of the lesson.
## YEAR 7: AUTUMN TERM

**Teaching objectives for the main activities**

<td><strong>Number 1</strong> (6 hours) Place value (36–41)</td>
<td>• Remember learned responses for longer. (P2)</td>
<td>• Use practical methods to associate names and symbols with numbers. (P6)</td>
<td>• Say number names to at least 100, from and back to zero.</td>
<td>• Read and write whole numbers in figures and words.</td>
</tr>
<tr>
<td></td>
<td>• Anticipate known events. (P3)</td>
<td>• Know what each digit in a two-digit number represents including 0 as a place holder.</td>
<td>• Use decimal notation in the context of money.</td>
<td>• Use decimal notation for tenths and hundredths; know what each digit represents in numbers with up to two decimal places.</td>
</tr>
<tr>
<td></td>
<td>• Accept and engage in exploration with help from others. (P2)</td>
<td>• Join in rote-counting up to 5/10 and use the numbers in familiar activities and games. (P6/P7)</td>
<td>• Order a set of decimals or measurements with the same number of decimal places.</td>
<td>• Order a set of decimals or measurements with the same number of decimal places.</td>
</tr>
<tr>
<td></td>
<td>• Focus attention on certain objects. (P1)</td>
<td>• Use practical methods to associate names and symbols with numbers. (P6)</td>
<td>• Calculate a temperature rise or fall across 0 °C.</td>
<td>• Calculate a temperature rise or fall across 0 °C.</td>

<td>From Y4, Y5 and Y6</td>
<td>From the Y7 teaching programme</td>
</tr>
</tbody>
</table>

#### Algebra 1

**8 hours**

**Sequences**

1. Begin to show attendance in response to familiar people, routines, activities and actions. (P3)
2. Remember learned responses over short periods of time. (P2)
3. Show emerging awareness of activities and experiences. (P1)

4. Show awareness of time through some familiarity with significant times of the day such as meal times. (P8)
5. Count items up to 5/10.

**Core**

- Recognise and extend number sequences formed by counting from any number in steps of constant size, extending beyond zero when counting back.
- Know squares to at least $10 \times 10$.

#### Formulae and identities

**112–113**

**Solving problems**

1. Apply potential solutions systematically to solve problems. (P3)

2. Demonstrate an interest in the relationship between objects. (P4)

3. Recognise all coins.
4. Solve money and ‘real-life’ problems.

5. Solve simple word problems.

6. Know the days of the week.
7. Order the months of the year.

**Core**

- Generate terms of a simple sequence, given a rule (e.g. finding a term from the previous term, finding a term given its position in the sequence).
- Generate sequences from practical contexts and describe the general term in simple cases.
- Express simple functions in words, then using symbols; represent them in mappings.
- Use letter symbols to represent unknown numbers or variables.
- Suggest extensions to problems by asking “What if…?” begin to generalise and to understand the significance of a counter-example.
### Shape, space and measures 1

**4 hours**

</tr>
</tbody>
</table>

- Explore materials in increasingly complex ways. (P3)
- Co-operate in shared exploration and supported participation. (P2)
- Show simple reflex responses. (P1)
- Start to pick out named shapes from a collection. (P7)
- Manipulate 3-dimensional shapes. (P6)
- Classify and describe 3-D and 2-D shapes.
- Identify different nets for an open cube.
- Know the names and language of 2-D and 3-D shapes.
- Measure and draw lines to the nearest millimetre.
- Record estimates and readings from scales to a suitable degree of accuracy.
- Understand that area is measured in square centimetres (cm²).
- Understand, measure and calculate perimeters of rectangles and regular polygons.
- Use 2-D representations to visualise 3-D shapes and deduce some of their properties.
- Use names and abbreviations of units of measurement to measure, estimate, calculate and solve problems in everyday contexts involving length, area.
- Know and use the formula for the area of a rectangle; calculate the perimeter and area of shapes made from rectangles.
- Solve word problems and investigate in a range of contexts: length, perimeter and area.

### Mensuration

(198–201, 228–231, 234–241)

- Calculate the perimeter of a shape made from rectangles.
- Calculate the area of a rectangle by counting squares.
- Use names and abbreviations of units of measurement to measure, estimate, calculate and solve problems in everyday contexts involving length, area.

### Solving problems

(18–21)

- Solve word problems and investigate in a range of contexts: length, perimeter and area.

<tr>
<td>Handling data (6 hours) Handling data (256–61, 268–271)</td>
<td>• Respond to options and choices with actions or gestures. (P3) • May give intermittent reactions to activities and experiences. (P1) • Apply potential solutions systematically to problems. (P3) • Perform actions often by trial and improvement. (P2)</td>
<td>• Complete a range of classification activities using given criteria. (P7) • Begin to identify when an object is different and does not belong to given categories. (P6) • Begin to sort sets of objects according to a single attribute. (P5)</td>
<td>• Solve a problem by sorting, classifying and organising information in a table, pictogram, block graph or bar chart.</td>
<td>• Calculate statistics for small sets of discrete data: - find the mode, median and range, and the modal class for grouped data; - calculate the mean, including from a simple frequency table, using a calculator for a larger number of items. • Interpret diagrams and graphs (including pie charts), and draw conclusions based on the shape of graphs and simple statistics for a single distribution.</td>
</tr>
<tr>
<td>Probability (276–283)</td>
<td>• Discuss the chance or likelihood of particular events.</td>
<td>• Use vocabulary and ideas of probability, drawing on experience. • Understand and use the probability scale from 0 to 1; find and justify probabilities based on equally likely outcomes in simple contexts; identify all the possible mutually exclusive outcomes of a single event. • Collect data from a simple experiment and record in a frequency table; estimate probabilities based on this data.</td>
<td></td>
<td></td>
