The criteria

Introduction

GCSE subject criteria set out the knowledge, understanding, skills and assessment objectives common to all GCSE specifications in a given subject.

They provide the framework within which the awarding organisation creates the detail of the specification.

Aims and learning outcomes

1. GCSE specifications in Engineering should encourage learners to be inspired, moved and changed by following a broad, coherent, satisfying and worthwhile course of study and gain an insight into related sectors, such as manufacturing. They should prepare learners to make informed decisions about further learning opportunities and career choices.
2. All specifications in Engineering must enable learners to:
 - actively engage in the processes of engineering to develop as effective and independent learners;
 - understand the contribution that engineering makes to society and the economy;
 - develop an awareness and appreciation of commercial and industry issues and emerging technologies in the context of engineering;
 - develop and use a range of transferable skills when designing and making engineered products, to enable them to become effective and independent learners;
 - develop an awareness and understanding of environmental issues and sustainable development;
 - develop applied engineering skills as a foundation for future learning and progression;
 - apply their knowledge and understanding of engineering by using evaluation and problem-solving skills.

Subject content

3. The content of GCSE specifications in Engineering must reflect the learning outcomes.
4. GCSE specifications must require learners to develop and demonstrate knowledge and understanding of:

Engineering materials and their properties in the following groups:

- ferrous and non-ferrous metals and alloys;
- polymers;
- ceramics;
- composites that combine the properties of different materials.

The functions of:

- mechanical components;
- electrical/electronic components;
- pneumatic/hydraulic components.

The properties, characteristics and features of materials that affect:

- ability to be shaped and formed;
- ability to be treated;
- ability to be given a surface finish;
- ease of handling;
- cost implications;
- availability, form and supply.

Engineering processes:

- material removal;
- shaping and manipulation;
- joining and assembly;
- heat and chemical treatment;

- surface finishing.

Quality control techniques:

New technology used in and by the engineering industries:

- information, communications and digital technologies;
- modern and 'smart' materials and components;
- systems and control technology to organise, monitor and control production.

The impact of modern technologies:

- when engineering a product;
- on engineered products;
- on engineering industries;
- on stages in engineering a product;
- advantages and disadvantages that the use of modern technology has brought to society.

Engineered products:

- investigate a variety of engineered products that use modern technology;
- investigate the impact of modern technology on the design and production of a range of engineered products.

5. GCSE specifications must require learners to develop the ability to do the following.

Design a product:

- analysing client design briefs for engineered products;
- producing, using and modifying design specifications for engineered products;
- generating design solutions for engineered products;
- reading, understanding and creating a range of appropriate engineering drawings to current industry standards;

- presenting a design solution for engineered products responding to client feedback.

6. GCSE specifications must require learners to develop the ability to do the following:

Engineer a product:

- producing and using production plans;
- selecting and using a range of appropriate materials, parts and components;
- selecting and using appropriate processes;
- applying quality control techniques;
- selecting and using appropriate tools and equipment;
- applying health and safety procedures;
- analysing and revising the completed product, taking into account how it could be improved.

Assessment objectives

7. The specification must require learners to demonstrate the assessment objectives in an applied context.

8. All specifications must require learners to demonstrate their ability to:

	Assessment objectives	Weighting
AO1	Recall, select and communicate their knowledge and understanding of a range of contexts.	25–35%
AO2	Apply skills, knowledge and understanding, including quality standards, in a variety of contexts and to plan and carry out investigations and tasks, involving a range of tools, equipment, materials and components.	45–55%
AO3	Analyse and evaluate evidence, make reasoned judgements and present conclusions.	15–25%

Scheme of assessment

9. GCSE specifications in Engineering must allocate a weighting of 40 per cent to external assessment and a weighting of 60 per cent to controlled assessment in the overall scheme of assessment.
10. Question papers must be targeted at the full range of GCSE grades.
