

CHAPTER 2

How do the achievements compare between pupils with and without special educational needs?

Introduction

This chapter looks at the differences in educational attainment between pupils with and without special educational needs at Early Years Foundation Stage Profile (mainly pupils aged 5), Key Stage 1 (mainly aged 7), Key Stage 2 (mainly aged 11) and Key Stage 4 (mainly aged 16) in 2011. These show additional information split by pupil characteristics, such as gender, ethnic origin, free school meal eligibility and first language, for each of the levels of provision and primary types of special educational need and the attainment at Key Stage 2 and Key Stage 4 of looked after children with special educational needs. The Early Years Foundation Stage Profile and Key Stage 1 figures are based on teachers' assessments of the pupils. Key Stage 3 teacher assessments are no longer published by the Department.

See Data Annex 2 for further detail on the material covered in this chapter. Referenced tables and publications can be found at the Department's Research and Statistics Gateway at <http://www.education.gov.uk/rsgateway>. All numbers which appear in this chapter were taken from the National Pupil Database (see Data Annex 2 for further details). Data were based on the academic year and level of special educational need provision was recorded in the January of the same year.

Key findings at Early Years Foundation Stage Profile

In 2010/11, 63 per cent of pupils with no special educational needs achieved a good level of development at Early Years Foundation Stage Profile compared to 24 per cent of those at Early Years Action, 21 per cent of those at Early Years Action Plus and 5 per cent of those with statements of special educational needs. Overall, 21 per cent of pupils with special educational needs achieved a good level of development, which shows a gap of 42 percentage points between pupils with and without special educational needs.

Early Years Foundation Stage Profile Achievement

Early Years Foundation Stage covers pupils between 3 and 5 years (covering nursery and reception years). The findings in this section refer to teachers' assessments of pupils at the end of the stage (mainly those who were 5 years old) in the stated academic year, at all types of schools. Special educational need information is recorded in January of each assessment year.

The Early Years Foundation Stage Profile (EYFSP) is a framework of six areas of learning covering children's physical, communication, numeracy, emotional, social and creative development measured by 13 assessment scales, each of which has nine points. Children who achieve a score of 78 points or more across the 13 assessment scales score an average of 6 points per scale. When a child achieves this overall score, and also achieves a score of 6 or more in each of the 7 scales in the Personal, Social and Emotional development (PSE) and Communication, Language

Children with Special Educational Needs 2012: An Analysis Chapter 2

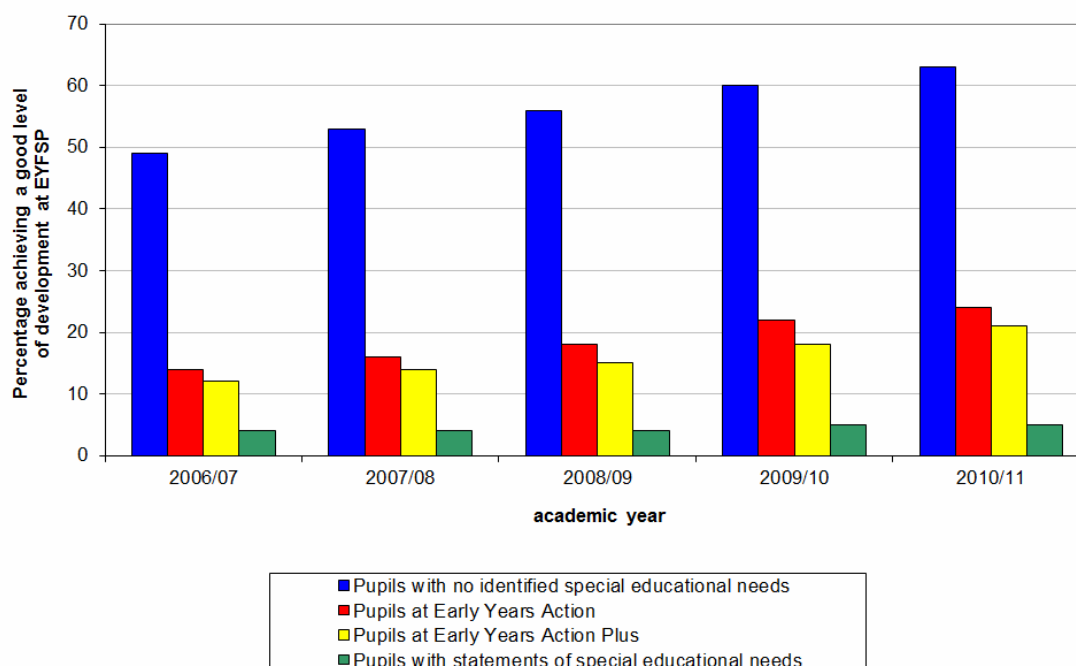

and Literacy areas of learning (CLL), they are deemed to be reaching a **good level of development**.

All commentary in this chapter on EYFSP is taken from analysis as part of the Statistical First Release *Early Years Foundation Stage Profile Attainment by Pupil Characteristics in England, 2010/11* at <http://www.education.gov.uk/rsgateway/DB/SFR/s001044>. More detailed information on Early Years Foundation Stage can be found in Data Annex 2.

Achievement at the end of the Early Years Foundation Stage by level of provision for special educational need

Table 1 in the above Statistical First Release and Figure 2.1 below show the percentage of pupils that achieved a good level of development from 2006/07 to 2010/11 by level of provision for special educational need. In each of the academic years, pupils without special educational needs were more likely to achieve a good level of development compared to pupils at School Action. In turn, pupils at School Action performed slightly better than those at School Action Plus and pupils at School Action Plus performed notably better than those with statements of special educational needs.

Figure 2.1: Percentage of pupils that achieved a good level of development at the end of the Early Years Foundation Stage in each year from 2006/07 to 2010/11 by level of provision for special educational need

In 2010/11, 63 per cent of pupils with no special educational needs achieved a good level of development compared to 24 per cent for those at Early Years Action, 21 per cent for those at Early Years Action Plus and just 5 per cent for those with statements of special educational needs. Overall, 21 per cent of pupils with special educational needs achieved a good level of development. This shows an attainment gap of 42 percentage points between pupils with and without special educational

Children with Special Educational Needs 2012: An Analysis

Chapter 2

needs, which is slightly wider than in 2009/10 when the gap was 41 percentage points.

Achievement at the end of the Early Years Foundation Stage by primary type of special educational need

Table 1 in the above Statistical First Release shows the percentage of pupils at School Action Plus or with statements of special educational needs that achieved a good level of development by their primary type of need. It shows that pupils with visual impairments were the most likely to achieve a good level of development in each year from 2006/07 to 2010/11. 35 per cent of pupils with visual impairments achieved a good level of development in 2010/11, followed by those with hearing impairment (23 per cent) and those with speech, language and communications needs or physical disabilities (both 22 per cent). Pupils with severe learning difficulty or profound and multiple learning difficulty were the least likely to achieve a good level of development. 1 per cent of pupils in these groups achieved the level.

Achievement at the end of the Early Years Foundation Stage by gender and special educational needs

Table 1 in the Statistical First Release shows that girls are more likely than boys to achieve a good level of development regardless of their level of provision for special educational need. In 2010/11, 27 per cent of girls with special educational needs achieved the level compared to 18 per cent of boys. For pupils with no special educational needs, 71 per cent of girls achieved a good level of development compared to 55 per cent of boys.

Achievement at the end of the Early Years Foundation Stage by free school meal eligibility and special educational needs

Table 2b in the Statistical First Release shows that pupils eligible for free school meals are less likely to achieve a good level of development than those not eligible, regardless of their level of provision for special educational need. In 2010/11, 16 per cent of pupils with special educational needs who are eligible for free school meals achieved the level compared to 23 per cent of those who are not eligible. For pupils with no special educational needs, 49 per cent of those eligible achieved a good level of development compared to 66 per cent of those who are not eligible.

Achievement at the end of the Early Years Foundation Stage by ethnicity and special educational needs

Table 2c in the Statistical First Release shows that pupils of mixed ethnicity with special educational needs are most likely to have achieved a good level of development. 22 per cent of pupils of mixed ethnicity achieved this level compared to 20 per cent of White pupils, 19 per cent of Asian pupils and 21 per cent of each of Black and Chinese pupils. For pupils, without special educational needs, White pupils and those of mixed ethnicity were the most likely to achieve this level. 64 per cent of both ethnic groups achieved the level compared to 59 per cent of Asian pupils, 61 per cent of Black pupils and 62 per cent of Chinese pupils.

Children with Special Educational Needs 2012: An Analysis

Chapter 2

Key findings at Key Stage 1

In 2010/11, the attainment gap between pupils with and without special educational needs at Key Stage 1 was lowest in mathematics and science. In mathematics, 64 per cent of pupils with special educational needs achieved the expected level compared to 97 per cent of pupils with no identified special educational needs and in science, 63 per cent of pupils with no special education needs achieved this level compared to 96 per cent of those without. These show an attainment gap of 33 percentage points. The widest attainment gap occurred in writing where 43 per cent of pupils with special educational needs achieved the expected level compared to 92 per cent of those with no identified special educational needs, which shows a gap of 49 percentage points. No subjects saw their attainment gaps narrow from 2009/10 to 2010/11.

Attainment at Key Stage 1

Key Stage 1 (KS1) refers to the stage of the National Curriculum for pupils aged between 5 and 7 years (school year groups 1 and 2). The findings in this section refer to the teacher assessments of pupils in maintained schools at the end of KS1 (mainly those who were 7 years old) in academic year 2010/11, who had special educational needs in January 2011. Pupils were assessed by teachers in reading, writing, mathematics and science at KS1 in 2010/11. The level of attainment in each subject expected for pupils at the end of KS1 is level 2.

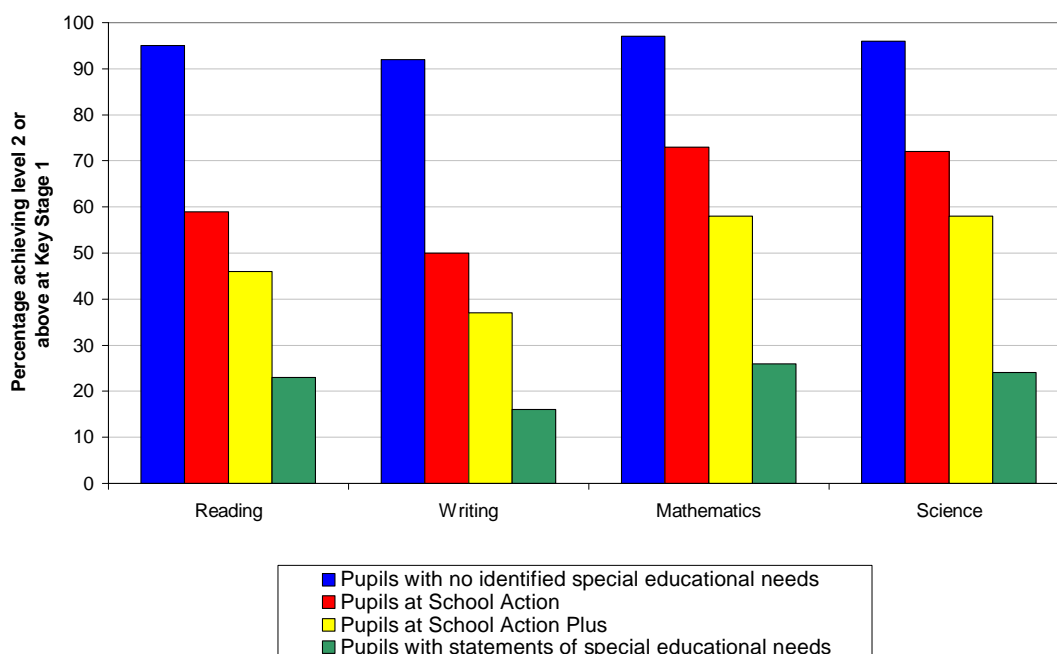

All commentary in this chapter on KS1 is taken from analysis as part of the Statistical First Release *National Curriculum Assessments at Key Stage 1 in England, 2011* at <http://www.education.gov.uk/rsgateway/DB/SFR/s001022/index.shtml>. More detailed information on KS1 can be found in Data Annex 2.

Attainment at Key Stage 1 by subject and level of provision for special educational need

Table 1 in the above Statistical First Release and Figure 2.2 below show the percentage of pupils that achieved level 2 or above in reading, writing, mathematics and science in 2010/11 by level of provision for special educational need. Figure 2.2 shows that, for each of the four subjects, pupils without special educational needs were more likely to achieve the expected level compared to pupils at School Action. In turn, pupils at School Action performed better than those at School Action Plus and pupils at School Action Plus performed better than those with statements of special educational needs. Pupils were more likely to achieve the expected level in mathematics and science, compared to reading and writing, regardless of their level of provision for special educational need.

Children with Special Educational Needs 2012: An Analysis Chapter 2

Figure 2.2: Percentage of pupils that achieved the expected level at Key Stage 1 in 2010/11 by subject and level of provision for special educational need

The attainment gap between pupils with and without special educational needs was lowest in mathematics and science. In mathematics, 64 per cent of pupils with special educational needs achieved level 2 or above at KS1 compared to 97 per cent of those with no special educational needs. In science, 63 per cent of pupils with any special educational needs achieved the expected level compared to 96 per cent with no identified special educational needs. Both of these subjects therefore show an attainment gap of 33 percentage points. The subject with the widest attainment gap was writing where 43 per cent of pupils with special educational needs achieved the expected level compared to 92 per cent without special educational needs which is a gap of 49 percentage points.

Attainment at Key Stage 1 by primary type of special educational need

Table 5 of the above Statistical First Release shows the percentage of pupils at School Action Plus or with statements of special educational needs achieving level 2 or above in the four subjects at KS1 by their primary type of need. It shows that, for all subjects, pupils with visual impairments were the most likely to achieve the expected level in each year between 2005/06 and 2010/11 with the exceptions of reading in 2009/10 and mathematics in 2008/09 and 2009/10 when pupils with hearing impairments were more likely. In 2010/11, of pupils with visual impairments, 64 per cent achieved the expected level in reading, 58 per cent in writing, 72 per cent in mathematics and 70 per cent in science. Pupils with severe learning difficulty or profound and multiple learning difficulty were the least likely to achieve the expected level for all subjects. For pupils with profound and multiple learning difficulty, 5 per cent achieved the expected level in reading, 3 per cent in writing, 4 per cent in mathematics and 4 per cent in science.

Children with Special Educational Needs 2012: An Analysis

Chapter 2

Attainment at Key Stage 1 by gender and special educational needs

Table 5 of the Statistical First Release shows that there is variation in the performance of the gender by special educational needs in 2010/11. For pupils with special educational needs, girls were more likely than boys to achieve the expected level in reading and writing but boys were more likely than girls to achieve it in mathematics and science. For pupils without special educational needs, girls were more likely than boys to achieve the expected level in reading and writing and there was no difference between the genders in mathematics and science.

Attainment at Key Stage 1 by free school meal eligibility and special educational needs

Table 6b of the Statistical First Release shows that pupils eligible for free school meals are less likely to achieve the expected level than those not eligible, regardless of subject or their level of provision for special educational need. In 2010/11, for pupils with special educational needs who were eligible for free school meals, 44 per cent achieved the expected level in reading, 35 per cent in writing, 57 per cent in mathematics and 56 per cent in science. For pupils with special educational needs who were not eligible for free school meals, 56 per cent achieved the expected level in reading, 47 per cent in writing, 67 per cent in both mathematics and science.

Attainment at Key Stage 1 by ethnicity and special educational needs

Table 6c of the Statistical First Release, shows that attainment at KS1 varies for different ethnic groups by subject and level of provision for special educational need. For pupils with any type of special educational need, attainment was highest for Black pupils in reading, for Chinese pupils in writing and mathematics, and for White pupils and those of mixed ethnicity in science. For pupils with no special educational needs, in reading and writing, White, Asian and pupils of mixed ethnicity were the most likely to achieve the expected level. In mathematics, White, Chinese and pupils of mixed ethnicity were the most likely and in science, White pupils alone were the most likely.

Key findings at Key Stage 2

Overall, 35 per cent of pupils with special educational needs achieved the expected level in both English and mathematics at Key Stage 2 in 2010/11, compared to 87 per cent for those with no special educational needs. Pupils with visual impairments were the most likely, of all the primary types of special educational need, to achieve the expected level in both English and mathematics at Key Stage 2 in 2010/11.

Gender

Boys were more likely than girls to achieve the expected level in both English and mathematics at Key Stage 2 in 2010/11, regardless of their level of provision for special educational need.

Ethnicity

Chinese pupils were most likely to achieve the expected level in both English and mathematics at Key Stage 2 in 2010/11 of all ethnic groups, regardless of level of provision for special educational need.

Free school meal eligibility

Pupils who were known to be eligible for free school meals were less likely to achieve the expected level in both English and mathematics at Key Stage 2 in 2010/11 than those who were not eligible for free school meals, regardless of their level of provision for special educational need.

Looked after children with special educational needs

Children looked after for at least 12 months at 31 March 2011 were generally less likely to achieve the expected level in both English and mathematics at Key Stage 2 in 2010/11, compared to all pupils, with the exception of those at School Action Plus and with statements, where looked after children were more likely to achieve expected standards.

Attainment at Key Stage 2

Key Stage 2 (KS2) refers to the stage of the National Curriculum for pupils aged between 7 and 11 years (school year groups 3 to 6). The findings in this section refer to pupils with special educational needs who were at the end of KS2 (mainly those who were 11 years old) in the academic year 2010/11 by their level of provision for need in the January of that year. Pupils were assessed in English and mathematics at KS2 in 2010/11. Science tests were discontinued in 2010. Where used throughout this section, 'both English and mathematics' refers to pupils' attainment in both KS2 English and KS2 mathematics. The level of attainment in each subject expected for pupils at the end of KS2 is level 4. All findings in this section refer to pupils at maintained schools.

All commentary in this chapter on KS2 is taken from analysis as part of the Statistical First Release *National Curriculum Assessments at Key Stage 2 in England 2010/2011 (revised)* at <http://www.education.gov.uk/rsgateway/DB/SFR/s001047/index.shtml>. More detailed information on KS2 can be found in Data Annex 2.

Attainment at Key Stage 2 by level of provision for special educational need

Table 8 in the above Statistical First Release shows the percentage of pupils that achieved the expected level in both English and mathematics at KS2 from 2006/07 to 2010/11. In each of the academic years, pupils without special educational needs were more likely to achieve the expected level compared to pupils at School Action. In turn, pupils at School Action performed slightly better than those at School Action Plus and pupils at School Action Plus performed better than those with statements of special educational needs.

In 2010/11, 87 per cent of pupils with no special educational needs achieved the expected level at both English and mathematics compared to 43 per cent for those at School Action, 31 per cent for those at School Action Plus and 15 per cent for those with statements of special educational needs. Overall, 35 per cent of pupils with special educational needs achieved the expected level. This is a slight increase from 2009/10 when 34 per cent achieved the expected level.

Children with Special Educational Needs 2012: An Analysis Chapter 2

Attainment at Key Stage 2 by subject and level of provision for special educational need

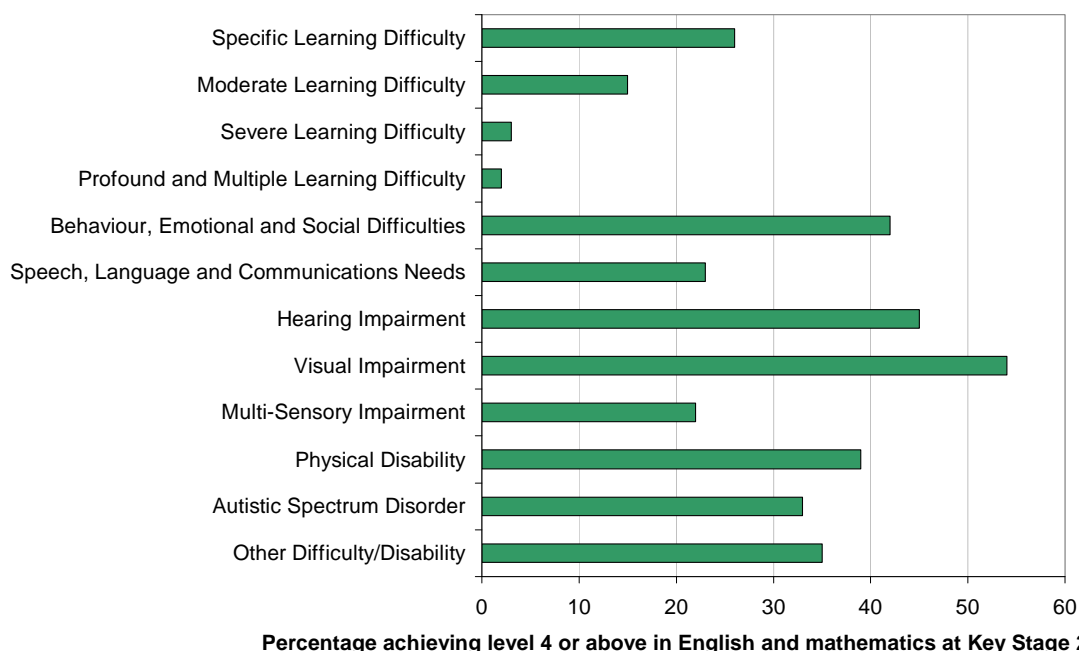

Table 8 in the above Statistical First Release shows the percentage of pupils achieving the expected level in English and mathematics in 2010/11 by level of provision for special educational need. For each subject, pupils without special educational needs were more likely to achieve the expected level compared to pupils at School Action. In turn, pupils at School Action performed better than those at School Action Plus and pupils at School Action Plus performed better than those with statements of special educational needs.

Pupils without special educational needs were more likely to achieve the expected level in English than in mathematics but this trend was reversed for pupils at School Action, School Action Plus or with statements of special educational needs. 49 per cent of pupils with special educational needs achieved the expected level in mathematics, compared to 47 per cent in English. The equivalent percentages for those with no special educational needs were 91 per cent for mathematics and 93 per cent for English.

Attainment at Key Stage 2 by primary type of special educational need

Table 8 in the Statistical First Release and Figure 2.3 below show the percentage of pupils at School Action Plus or with statements of special educational needs that achieved the expected level at both English and mathematics at KS2 in 2010/11 by primary type of need.

Figure 2.3: Percentage of pupils who achieved the expected level in Key Stage 2 English and mathematics in 2010/11 by primary type of special educational need

The data show that pupils with visual impairments were most likely to achieve the expected level in both English and mathematics at KS2 (54 per cent of those at School Action Plus or with statements) followed by pupils with hearing impairments and behavioural, emotional and social difficulties. Pupils with profound and multiple

Children with Special Educational Needs 2012: An Analysis

Chapter 2

learning difficulties were the least likely to achieve the expected level (2 per cent). Caution should be used when interpreting figures for some of the primary need groups due to low numbers in the groups.

Attainment at Key Stage 2 by gender and special educational needs

Table 8 in the Statistical First Release shows that boys are more likely than girls to achieve the expected level in both English and mathematics, regardless of their level of provision for special educational need. In 2010/11, 33 per cent of girls with special educational needs achieved the expected level compared to 37 per cent of boys. For pupils with no identified special educational needs, 87 per cent of girls achieved the expected level compared to 88 per cent of boys.

Attainment at Key Stage 2 by free school meal eligibility and special educational needs

Table 9b of the above Statistical First Release shows that pupils who are eligible for free school meals are less likely to achieve the expected level in both English and mathematics than those not eligible, regardless of their level of provision for special educational need. In 2010/11, 29 per cent of pupils with special educational needs who are eligible for free school meals achieved the expected level compared to 38 per cent who are not eligible. 79 per cent of those eligible with no special educational needs achieved the level compared to 89 per cent of those who are not eligible.

Attainment at Key Stage 2 by ethnicity and special educational needs

Table 9c of the Statistical First Release shows that Chinese pupils were most likely to achieve the expected level for all levels of provision for special educational need. 51 per cent of Chinese pupils with special educational need achieved the level and 91 per cent of those with no special educational needs. For pupils at School Action, School Action Plus and with statements, Asian pupils were the least likely to achieve the expected level. For those with no special educational needs, Black pupils were the least likely to achieve the level.

Attainment at Key Stage 2 of looked after children with special educational needs

Chapter 1 looked at the number of looked after children with special educational needs and this section of Chapter 2 looks at their attainment at KS2. All commentary in this chapter looks at children who were looked after continuously for 12 months at 31 March 2011 and is taken from analysis as part of the Statistical First Release *Outcomes for Children Looked After as at 31 March 2011* at <http://www.education.gov.uk/rsgateway/DB/SFR/s001046/index.shtml>.

Table 13 of this Statistical First Release and Figure 2.4 below show that children looked after for at least 12 months are generally less likely than their peers to achieve the expected level in both English and mathematics but there are variations depending on the level of provision for special educational need.

Children with Special Educational Needs 2012: An Analysis Chapter 2

Figure 2.4: Percentage of all pupils and children looked after for at least 12 months at 31 March 2011 that achieved the expected level in Key Stage 2 English and mathematics in 2010/11 by level of provision for special educational need

Children looked after were generally less likely to achieve the expected level at both English and mathematics compared to all pupils, with the exception of those at School Action and School Action Plus who were slightly more likely than their peers of the same level of provision. It should be noted that the findings from Chapter 1 showed that around 79 per cent of all pupils had no special educational needs in 2010/11 compared to 27 per cent of children looked after for at least one year. This should be taken into consideration when comparing the attainment data of all pupils and looked after children with special educational needs.

Key findings at Key Stage 4

Overall, 22 per cent of pupils with special educational needs achieved Level 2 including English and mathematics at Key Stage 4 in 2010/11, compared to 70 per cent for those with no special educational needs. Pupils with visual impairments were most likely, of all the primary types of special educational need, to achieve this standard.

Gender

For pupils with no special educational needs, at School Action and at School Action Plus, girls were more likely than boys to achieve Level 2 including English and mathematics. However, boys were more likely than girls to achieve this level if they had statements of special educational needs.

Ethnicity

Chinese pupils were more likely to achieve Level 2 including English and mathematics at Key Stage 4 than pupils of other ethnic groups, regardless of their level of provision for special educational need.

Free school meal eligibility

Pupils who were known to be eligible for free school meals were less likely to achieve Level 2 including English and mathematics, than those who were not eligible, regardless of their level of provision for special educational need.

Looked after children with special educational needs

Children looked after for at least 12 months at 31 March 2011 were less likely to achieve Level 2 including English and mathematics at Key Stage 4 than all pupils, regardless of their level of provision for special educational need.

Attainment at Key Stage 4

Key Stage 4 (KS4) refers to the stage of the National Curriculum for pupils aged between 14 and 16 years (school year groups 10 and 11). The findings in this section refer to pupils who were at the end of KS4 (mainly those who were 16 years old) in the academic year 2010/11, by their level of provision for special educational need in the January of that year. Pupils were assessed in a range of GCSE subjects or equivalent qualifications. The level of attainment expected for pupils at the end of KS4 is Level 2 (i.e. at least five A* to C GCSE grades or equivalent) including English and mathematics.

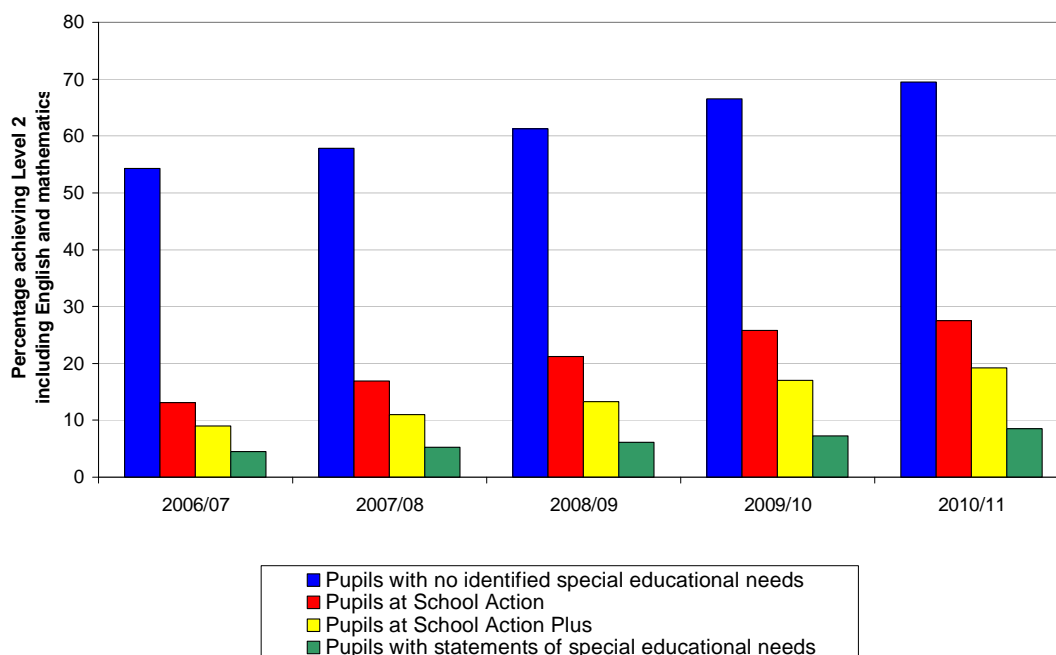

All commentary in this chapter on KS4 is taken from the Statistical First Release *GCSE and Equivalent Attainment by Pupil Characteristics in England, 2010/11* at <http://www.education.gov.uk/rsgateway/DB/SFR/s001057/index.shtml>.

Attainment at Key Stage 4 by level of provision for special educational need

Table 1 in the above Statistical First Release and Figure 2.5 below show the percentage of pupils that achieved Level 2 including English and mathematics by level of provision for special educational need from 2006/07 to 2010/11. The process before the quality of outcomes for children. Figure 2.5 shows, for all years, pupils without special educational needs were more likely to achieve this standard compared to pupils at School Action. In turn, pupils at School Action were more likely than those at School Action Plus and those at School Action Plus were more likely than those pupils with statements of special educational needs. The attainment percentage increased in each year between 2006/07 to 2010/11 for all levels of provision for special educational need.

Children with Special Educational Needs 2012: An Analysis Chapter 2

Figure 2.5: Percentage of pupils that achieved Level 2 including English and mathematics at Key Stage 4 in each year from 2006/07 to 2010/11 by level of provision for special educational need

In 2010/11, 22 per cent of pupils with any special educational needs achieved this standard compared to 70 per cent of those with no special educational needs which is an attainment gap of 48 percentage points. In 2009/10, the equivalent values were 20 per cent with special educational needs and 67 per cent without special educational needs for a gap of 47 percentage points. Therefore, the attainment gap has widened slightly in the most recent year.

Attainment at Key Stage 4 by primary type of special educational need

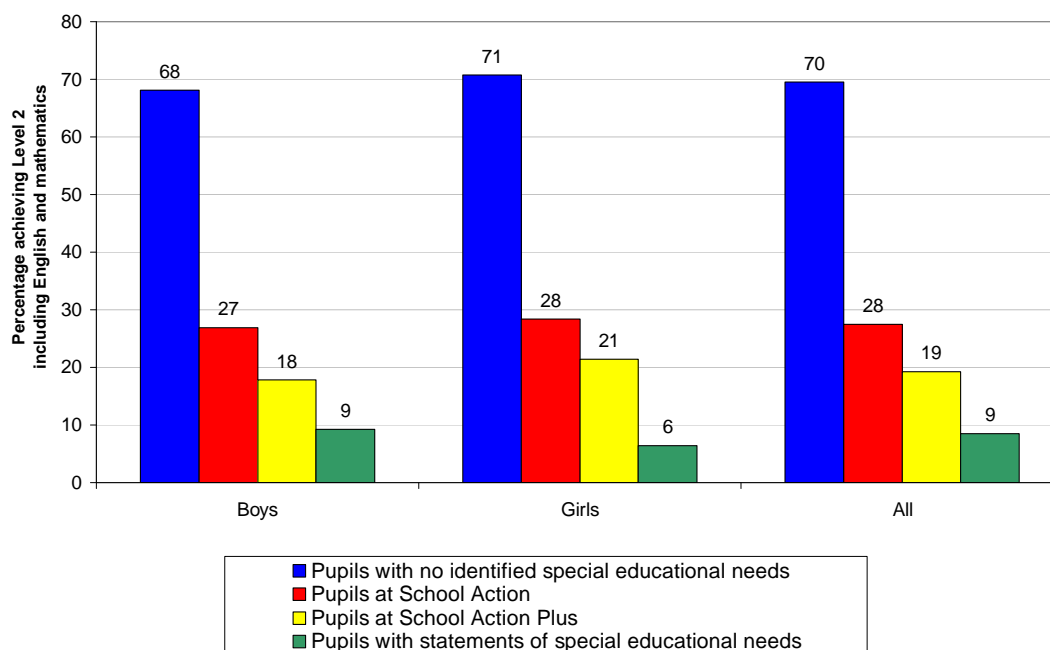

Table 1 of the Statistical First Release shows that pupils with visual impairments were most likely to achieve Level 2 including English and mathematics of all the primary types of special educational need. 44 per cent of pupils with visual impairments achieved this standard followed by those with hearing impairment (40 per cent) and with physical disability (29 per cent). Pupils with severe learning difficulty and those with profound and multiple learning difficulty were the least likely to achieve this standard.

Attainment at Key Stage 4 by gender and special educational needs

Table 1 in the Statistical First Release and Figure 2.6 below show that girls were generally more likely to achieve Level 2 including English and mathematics at KS4 with the exception of pupils with statements of special educational needs where boys were more likely.

Children with Special Educational Needs 2012: An Analysis
Chapter 2

Figure 2.6: Percentage of pupils that achieved Level 2 including English and mathematics at Key Stage 4 in 2010/11 by gender and level of provision for special educational need

24 per cent of girls with special educational needs achieved Level 2 including English and mathematics compared to 21 per cent of boys. For pupils with no special educational needs, 71 per cent of girls achieved this standard compared to 68 per cent of boys. The attainment gap is therefore 47 percentage points for both genders.

Attainment at Key Stage 4 by free school meal eligibility and special educational needs

Table 2b of the Statistical First Release shows that pupils known to be eligible for free school meals were less likely to achieve Level 2 including English and mathematics at KS4 than those not eligible regardless of their level of provision for special educational need. In 2010/11, 14 per cent of those with special educational needs who were eligible for free school meals achieved this standard compared to 25 per cent of pupils who were not eligible. For pupils with no identified special educational needs, 50 per cent of pupils eligible for free school meals achieved the standard compared to 72 per cent of pupils who were not.

Attainment at Key Stage 4 by ethnicity and special educational needs

Table 2c of the Statistical First Release shows that Chinese pupils were the most likely to achieve Level 2 including English and mathematics of all ethnic groups regardless of their level of provision for special educational need. For pupils with special educational needs, 45 per cent of Chinese pupils achieved this standard compared to 21 per cent of White pupils, 27 per cent of Asian pupils, 26 per cent of Black pupils and 25 per cent of pupils of mixed ethnicity. For pupils with no special educational needs, 84 per cent of Chinese pupils achieved Level 2 including English and mathematics compared to 70 per cent of White pupils, 72 per cent of Asian pupils, 66 per cent of Black pupils and 70 per cent for pupils of mixed ethnicity.

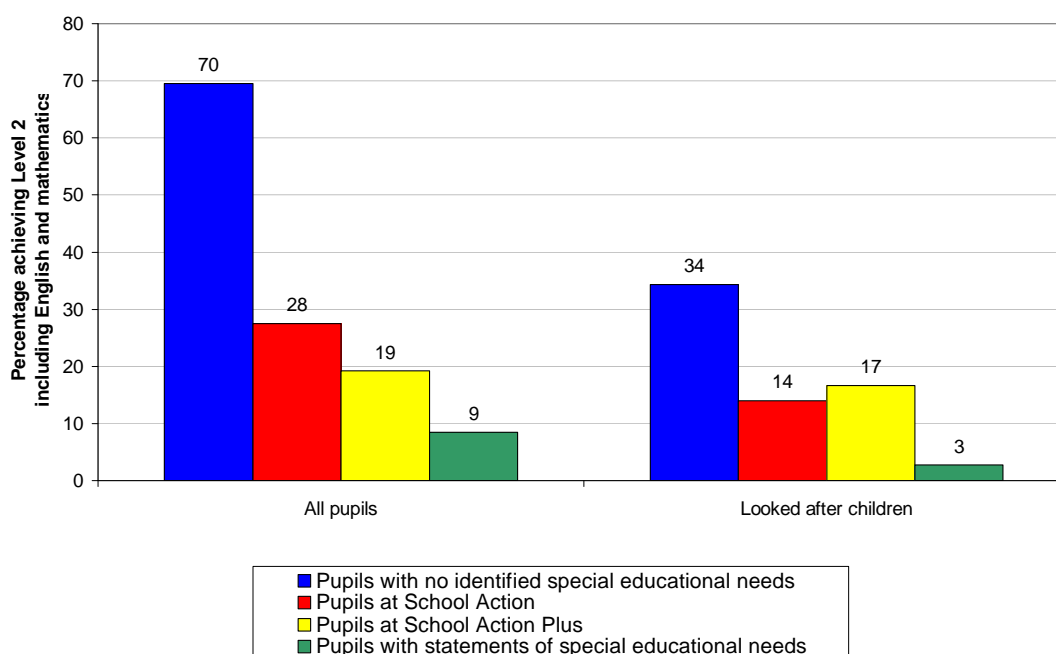

Children with Special Educational Needs 2012: An Analysis Chapter 2

Attainment at Key Stage 4 of looked after children with special educational needs

Chapter 1 looked at the number of looked after children with special educational needs and this section of Chapter 2 looks at their attainment at KS4. All commentary in this chapter refers to children who were looked after continuously for 12 months at 31 March 2011 and is taken from analysis as part of the Statistical First Release *Outcomes for Children Looked After as at 31 March 2011* at <http://www.education.gov.uk/rsgateway/DB/SFR/s001046/index.shtml>.

Table 14 of the above Statistical First Release and Figure 2.7 below show that looked after children are less likely than all pupils to achieve Level 2 including English and mathematics regardless of their level of provision for special educational need.

Figure 2.7: Percentage of all pupils and children looked after for at least 12 months at 31 March 2011 that achieved Level 2 including English and mathematics in 2010/11 by level of provision for special educational need

Looked after children were less likely than all pupils to achieve Level 2 including English and mathematics for all level of provision for special educational need. 11 per cent of looked after children with special educational needs achieved this standard compared to 22 per cent of all pupils with special educational needs. 34 per cent of looked after children with no special educational needs achieved the standard compared to 70 per cent of all pupils. Interestingly, looked after children at School Action Plus were slightly more likely than those at School Action to achieve Level 2 including English and mathematics. When comparing Figure 2.7 to Figure 2.4, it can be seen that there is a larger attainment gap between looked after children and all pupils at KS4 than KS2.
