# Summary Statistics: A Description

---

---

SS 1 Achievement of funding target; a measure of the degree to which an institution has achieved its funding target

---

SS 2 Change in student numbers; a measure of the level of change in student enrolments at an institution

---

SS 3 In-year retention rates; a measure of the effectiveness of an institution's teaching, and guidance and support process, as measured by the retention of students on their learning programmes

---

SS 4 Achievement rates; a measure of the effectiveness of an institution in enabling students to attain their learning goals

---

SS 5 Contribution to the national targets; a measure of the number of students attaining one of the national learning targets by achieving an NVQ or equivalent at the appropriate level

---

## Definition of institutions

The following terms have specific meanings within this publication:

Colleges – sometimes described as sector colleges and include agriculture and horticulture colleges; art, design and performing arts colleges; specialist designated institutions; general further education colleges; tertiary colleges and sixth form colleges

External Institutions – local education authority (LEA) maintained and independently-funded external institutions that were funded by the Further Education Funding Council (FEFC)

Institutions – refers to both colleges and external institutions

# Summary Statistics for Further Education Institutions

England 1999/2000

---

## Introduction

1 This publication contains summary statistics, analysis and interpretation for 415 further education (FE) and sixth form colleges in England plus similar data and comment for 212 LEA maintained and independent external institutions. The statistics for individual institutions relate to the 1999/2000 and 1998/99 teaching years with trends since 1997/98 included in the section on analysis and interpretation.

2 It is the first year that summary statistics have been produced by the Learning and Skills Council (LSC) for further education institutions. The summary statistics are calculated primarily from the individualised student record (ISR) and are directly analogous to the performance indicators published by the Further Education Funding Council (FEFC).

3 Five summary statistics are shown for each institution, focusing on key areas of activity. The summary statistics have been developed to complement existing published information and have five main purposes:

- to enable institutions to compare their performance with those of equivalent organisations
- to enable institutions to set targets for improving their performance which are both realistic and challenging
- to provide information to the Department for Education and Skills (DFES) and the general public as part of the accountability for spending public funds
- to enable institutions and the Council to monitor changes in performance at each institution over time.
- to inform the provider review process undertaken by the LSC.

## Key Results for 1999/2000 and Comparison with 1997/98 and 1998/99 for colleges

4 The five statistics have been calculated from information provided by institutions as part of the annual cycle of student and financial data returns to the Council. All of the statistics except SS 5 (attainment of NVQs or equivalent) relate to provision funded wholly or partly by the Council. The five summary statistics published are unchanged from the FEFC performance indicators shown in 1997/98. They are explained in more detail in annex D.

5 Results for 1997/98 and 1998/99 for institutions were first published in Performance Indicators 1998/99: Further education in England, December 2000. The results for 112 institutions were updated and republished in a supplement published in February 2001. The results for 1997/98 and 1998/99 in this

publication take into account any revisions to the underlying data since they were previously published.

6 Analysis of the summary statistics shows that:

## SS 1: Achievement of funding target

### Colleges

- the median college achieved 99% of its funding target, down from 100% in 1998/99 and 101% in 1997/98. The middle 50% of colleges achieved between 95% and 101% of their funding unit target. These figures reflect the challenge faced by colleges in achieving their funding targets.

### External institutions

- the range of results are much wider for external institutions than for sector colleges and the middle 50% achieved between 94% and 113% of their funding unit target. The median institution achieved 102% of its funding target, against 106% in 1998/99.

## SS 2: Percentage change in student numbers

### Colleges

- the change in full-time student numbers between 1998/99 and 1999/2000 for the median sector college was an increase of 1%, compared with a decrease of 2% in the previous two years

- the change in part-time student numbers for the median sector college between 1998/99 and 1999/2000 was an increase of 3%. This compares with a decrease of 1% in 1998/99 and an increase of 5% in 1997/98. In all years, the percentage change varied substantially between colleges
- although student numbers increased in the median college, a small number of colleges had very large decreases in student numbers. As a result, overall student numbers in colleges fell by 1.2% in 1999/2000 (Statistical First Release, July 2001).

### External institutions

- the change in full-time student numbers for the median external institution between 1998/99 and 1999/2000 was an increase of 10%. This represents an increase of three percentage points over the previous year's increase. Some volatility in this statistic is to be expected in view of the small number of full-time students attending external institutions. The change in part-time student numbers between 1998/99 and 1999/2000 for the median institution was an increase of 2%. As with sector colleges, the percentage change varied significantly between institutions.

## SS 3: In-year retention rate

### Colleges

- the in-year retention rate for the median sector college in 1999/2000 was 87% for full-time students and 84% for part-time students. These medians are the same as those recorded in 1998/99 and 1997/98. There has been very little change in retention rates since 1995/96
- colleges having the lowest levels of retention rate in previous years have shown improvements in 1999/2000. The median improvement in retention rate for part-time students in 1999/2000 for those colleges whose in-year part time retention rate was in the bottom quartile in 1998/99 was 3 percentage points
- the middle 50% of sector colleges had a full-time in-year retention rate of between 83% and 90% and a part-time in-year retention rate of between 79% and 88% in 1999/00. The ranges for the previous two years were similar
- for part-time students, the median sector college in-year retention rate continued to be lowest in sixth form colleges at 79%, the same as for 1998/99. Sixth form colleges often have small numbers of part-time students.

### External institutions

- the great majority of provision within external institutions is part-time and the in-year retention rate for the median institution was 80%, an increase of two percentage points on 1998/99. The middle 50% of institutions had a part-time in-year retention rate of between 74% and 85%, which is similar to 1998/99.

## SS 4: Achievement rates

### Colleges

- overall achievement rates have increased over the past three years
- the achievement rate for all qualifications for the median sector college in 1999/2000 was 77%, one percentage point higher than 1998/99 and two percentage points higher than in 1997/98
- the median sector college achievement rate is highest for long qualifications at 81% in 1999/2000, an increase of three percentage points over the previous year; and lowest for medium length qualifications at 73%, which also represents an increase of three percentage points over the previous year.
- colleges with the lowest achievement rates in 1998/99 have demonstrated the greatest levels of improvement in 1999/2000. The median improvement in achievement rate was 7 percentage points for those colleges who formed the bottom quartile in 1998/99.
- the median achievement rate for medium length qualifications in general further education and tertiary colleges increased by 11 percentage points over the three years between 1996/97 and 1999/2000 from 59% to 70%.
- there continues to be a wide range of achievement rates in colleges. This has reduced since 1997/98 as colleges with the lowest achievement rates make significant improvements. For example, in 1997/98 a quarter of sector colleges had an achievement rate for long qualifications

below 67%. The equivalent figure in 1999/2000 was 73% (see figure 22a)

- the median achievement rate continues to vary by type of college; for example, in 1999/2000 the median achievement rate for all qualifications ranged from 85% in sixth form colleges and 82% in specialist art, design and performing arts colleges and agriculture and horticulture colleges, to 74% in general further education and tertiary colleges.

### External institutions

- the median external institution achievement rate for all qualifications was 76% which represents a decrease from the value recorded in 1998/99 and may, in part, be explained by a greater number of institutions providing data suitable for inclusion in the publication. Those institutions for whom footnotes were shown in 1998/99 tend to have lower achievement rates in 1999/2000 than other external institutions
- the median achievement rate for external institutions is highest for some long qualifications at 83% in 1999/2000, with the median value for short and medium length qualifications being 74% and 86% respectively
- there is a wide range of achievement rates across external institutions with the middle 50% having an achievement rate across all qualifications of between 61% and 91%.

## SS 5: Contribution to the national learning targets

SS 5 shows the volume of an institution's contribution to the national targets and covers all provision at institutions:

### Colleges

- summing the statistic across all colleges shows that:
  - 65,200\* students aged between 16 and 18 achieved NVQ level 2 or equivalent in 1999/2000. This compares with 64,000 in 1998/99 and 63,100 in 1997/98
  - 135,600\* students aged between 16 and 20 achieved NVQ level 3 or equivalent in 1999/2000. This compares with 132,000 in 1998/99 and 129,400 in 1997/98
  - 118,800\* students aged 21 and over achieved NVQ level 3 or equivalent in 1999/2000. This compares with figures of 112,200 in 1998/99 and 110,400 in 1997/98.

*\* estimated value taking into account colleges who have not yet submitted data*

### External institutions

- external institutions have relatively few students under the age of 21 and they have few students aged over 21 studying for qualifications at NVQ level 3. Where individual external institutions make contributions to the national targets these are shown; however, given the low level of participation, median values are likely to be misleading and for that reason are not shown.

## Interpreting the statistics

7 The following information is included in the annexes to this publication:

- annex A: background and approach to the summary statistics
- annex B: analysis and interpretation of the summary statistics
- annex C: table of individual institution summary statistics and supporting data. This information is available in electronic form on the Internet by accessing the Council's information pages on [www.lsc.gov.uk](http://www.lsc.gov.uk)
- annex D: definitions and sources
- annex E: alphabetical index of institutions showing the local LSC area and institution type.

8 For colleges, broad comparisons can be made between the in-year retention and achievement rates shown respectively in SS 3 and SS 4 and the results shown in *Benchmarking Data 1997/98 to 1999/2000: Retention and achievement rates in further education colleges in England*. Similarly, external institutions can make comparisons with the results shown in *Benchmarking Data 1998/99: Retention and achievement rates in external institutions in England*. 1999/2000 benchmarking data for external institutions will be published during autumn 2001. Institutions wishing to compare their summary statistics with the results published in benchmarking data should note the definitional differences between the results shown in the two publications, explained in annex B of *Benchmarking Data 1997/98 to 1999/2000*. The main differences are:

- SS 3 summarises retention for students on all their qualifications within a particular teaching year; the benchmarking data shows retention on each qualification over its whole duration where this is longer than one teaching year
- SS 4 and benchmarking data on achievement rates are calculated in a similar way, although SS 4 includes partial achievement whereas the benchmarking data does not.

9 There are a number of key points to bear in mind when interpreting the summary statistics for an individual institution:

- a. the statistics should be viewed as part of a range of information which institutions and others publish about their activities and should also be considered in relation to the institution's strategic plan and mission;
- b. the summary statistics give aggregate information about each institution. The statistics can only provide a starting point for institutions to compare their performance with institutions similar to their own. The reasons for differential performance can then be explored, separating differences arising from unique features of an institution, from those where changes in practice can lead to improved performance;

- c. all the summary statistics except SS 5 relate to Council-funded provision in institutions. Where achievement rates or other measures are published this is often on a different basis from the figures presented here and great caution should be exercised in making comparisons. For example, the performance tables for schools and colleges published each November by the DfES, relate to 16 to 18 year olds studying particular qualifications while the summary statistics in this publication relate to all students and their qualifications. Almost four in five students in the further education sector are aged over 18.

# Annex A: Background and Approach to the Summary Statistics

---

## Background

1 In June 1992 the secretary of state for education asked the Further Education Funding Council (FEFC) to work with colleges to develop performance indicators, as part of the requirement under section 50 of the *Further and Higher Education Act 1992*, that institutions publish information about their financial and other resources and use made of such resources. The Learning and Skills Council was established by the Learning and Skills Act 2000 and will continue to publish information on the effective and efficient use of resources. The LSC corporate plan 'Strategic framework to 2004' sets out the Council's key objectives and processes are being established for developing performance indicators across the full range of learning under the Council's remit.

2 In 1999 the External Institutions Review Group was set up by the FEFC to advise on funding arrangement for external institutions. The group were also asked to look at the contribution of external institutions to the lifelong learning agenda and at the areas of quality improvement and accountability. The group recommended that accountability requirements for external institutions should be as rigorous as for sector colleges and should be measured and reported accordingly.

3 A variety of information is already published about institutions' activities including:

- examination achievements of 16 to 18 year-olds, published annually by the DFES as part of the comparative tables of school and college performance
- college publications such as the college's charter and disability statement, annual college accounts and detailed information on the qualifications achieved by students each year
- OfSTED and ALI inspection reports.

## Approach

4 Diversity of provision is one of the distinguishing features of the further education sector. To attempt to capture this diversity in full using numerical measures would run the risk of increasing the volume of data to unmanageable levels, so reducing the impact and value of the statistics. The approach adopted by the FEFC and supported by the Learning and Skills Council for the 1999/2000 Summary Statistics is to publish a limited number of statistics which satisfy the following criteria:

- they should be clearly defined so that a reliable comparison between institutions is possible

## Annex A: Background and Approach to the Summary Statistics

- the data required to calculate them should be collected as part of institutions' other activities. There should be no special data collection needed
- they should be seen as relating to key areas of activity.
- the achievement of students' primary learning goals and, in particular, achievement which contributes to the national learning targets
- the value for money of provision.

5 The key areas of activity of interest to the LSC are:

- the recruitment of students and the learning programmes they follow
- students' commitment to their learning programmes

6 The Further Education Funding Council developed the original proposals for performance indicators with the help of a development group comprising college principals and other interested parties including the DFES and TECs. The Learning and Skills Council's approach to summary statistics for this year is same as in the 2000 FEFC publication; definitions of the statistics are given in annex D.

# Annex B: Analysis and Interpretation of Summary Statistics

---

1 This annex contains analysis and interpretation for each of the five summary statistics for 1999/2000 together with a comparison with the results for 1997/98 and 1998/99. The following information is shown for each statistic:

- purpose of the statistic
- description of the statistic
- results and interpretation including sector medians, medians and ranges by college type and regional medians.

2 Tables and figures showing results appear throughout the text. The abbreviations used in the figures are:

## Type of institution

EI	External institutions
GFEC / TC	General further education and tertiary colleges
SFC	Sixth form colleges
Specialist	Agriculture and horticulture and art, design and performing arts colleges

## SS 1: Achievement of Funding Target

### Purpose

3 To indicate the degree to which an institution has achieved its funding target, by

measuring the difference between an institution's provision of education and training programmes and that which an institution agreed to provide in return for Council funds. The statistic relates to provision wholly or partly funded by the Council.

### Description

4 The number of Council-funded units of activity, that is, funding units, generated by an institution for the teaching year (1 August to 31 July), as a percentage of its target funding units for that year.

### Results and interpretation

5 The funding agreement between the Council and an institution takes account of the entire range of an institution's activities including student recruitment, attendance and achievement as well as the different patterns of student attendance and the varied learning programmes they follow.

6 The statistic shows an institution's success in setting and achieving targets. A result of close to 100% is an indication of accurate planning. Prior to 1997/98, some institutions will have planned to gain additional funding through the demand-led element (DLE) funding arrangements which applied in 1996/97. DLE was withdrawn after 1996/97, and so institutions' achievement of their funding target in 1997/98 and subsequent years is typically much closer to 100%.

7 The results are summarised in table 1. Across sector colleges, the median college value for the achievement of the 1999/2000 funding target was 99% compared with 100% in 1998/99 and 101% in 1997/98. Just over one-third of sector colleges achieved or surpassed their funding target in 1999/2000 (see figures 1a and 2). The median value for external institutions was 102% (see figures 1b and 2).

8 The middle 50% of sector colleges in 1999/2000 achieved between 95% and 101% of their funding target; this was a similar range to 1998/99. The middle 50% of external institutions in 1999/2000 achieved between 94% and 113%, which represents a slight narrowing of the range compared with 1998/99.

\* mean calculated from fewer than four colleges

## SS 2: Change in Student Numbers

### Purpose

9 To indicate the level of change in student enrolments at an institution.

### Description

10 The percentage change in student numbers year on year. Separate information is shown for two broad modes of attendance: full-time which includes students studying on a full-time full-year basis; and part-time which includes students studying on a full-time part-year basis and part-time students. Student numbers at institutions in 1999/2000 are also shown for full-time and part-time attendance to provide a context for this statistic and the other statistics. The statistic relates to provision wholly or partly funded by the Council.

## Results and Interpretation

### Full-time students

11 Full-time student numbers in sector colleges increased by 1% between 1998/99 and 1999/2000 in the median college. The change in full-time student numbers varied substantially between colleges in all three years. In 1999/2000, full-time numbers declined by more than 4% at a quarter of colleges, but increased by more than 6% at another quarter (see figure 4a); the range in performance is very similar to that obtained in 1998/99.

12 Full-time student numbers increased by 10% between 1998/99 and 1999/2000 in the median external institution. The relatively few full-time students at external institutions

accounts for the wide variations in the change in student numbers between institutions with over a half of external institutions having no full time students.

13 The 1% median increase in full-time numbers masks some variations between college types (see figure 5). In 1999/2000 the median change in full-time numbers was an increase of 2% in sixth form colleges, whereas the median general further education and tertiary college and the median specialist agriculture and horticulture and art and design college had no change in full-time numbers.

### Part-time students

14 The change in part-time student numbers for the median sector college between 1998/99 and 1999/2000 was 3%. There was a 2% increase in part-time numbers for the median external institution.

15 The part-time numbers include those students studying on very short full-time courses, for example students studying a computer literacy and information technology course full-time for a week.

16 Growth rates varied between institutions in a similar manner to last year, see figures 7a and 7b, which show the range of results for colleges and external institutions respectively. In a quarter of sector colleges part-time numbers declined by over 9%, while in another quarter part-time numbers increased by over 16%.

17 Care should be taken in interpreting the weighted averages of sector colleges, particularly for SS 2 as shown in figure 6. The variability between institutions, coupled with an average calculated from a small number of colleges has resulted in some local LSCs showing results which are significantly different from the general pattern.

Table 2. SS 2: Student number trends

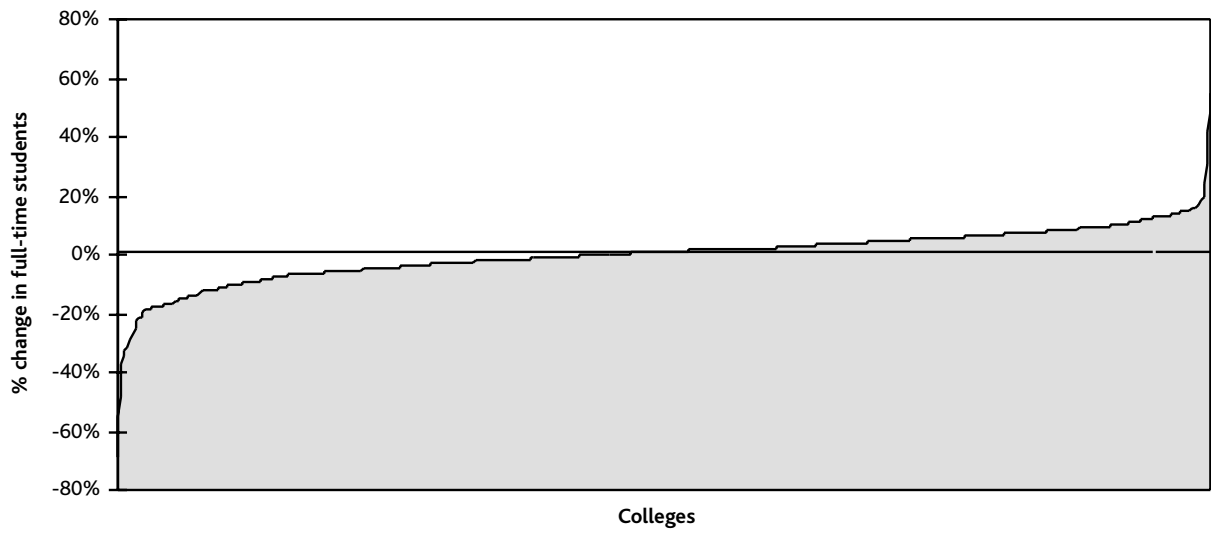

Figure 5. SS 2: Change in full-time students 1998/99 to 1999/2000. Median value by institution type

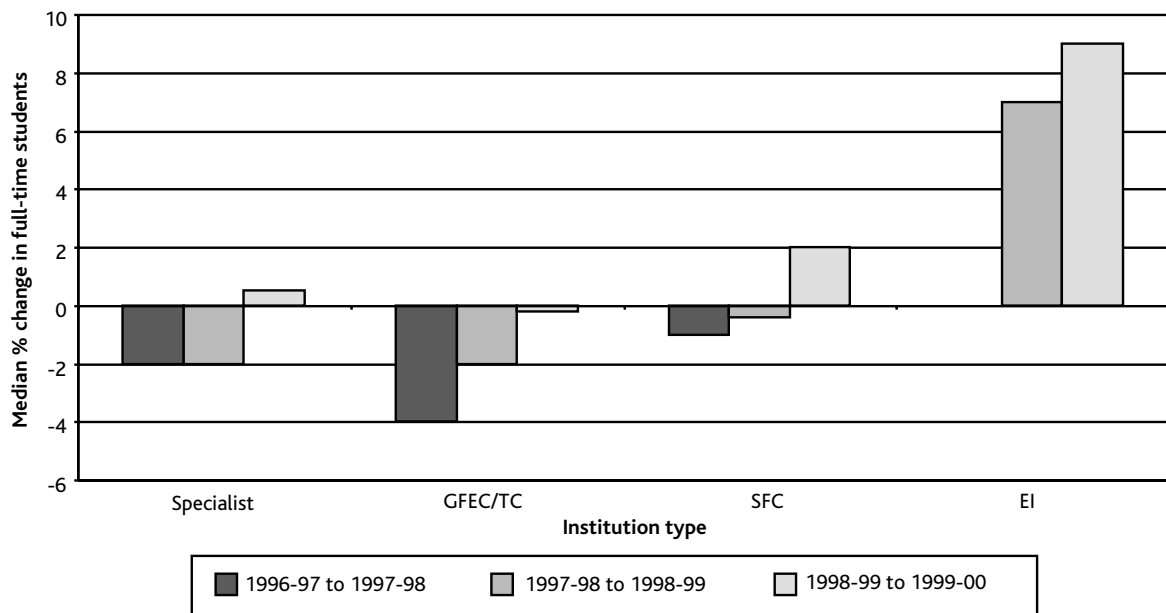

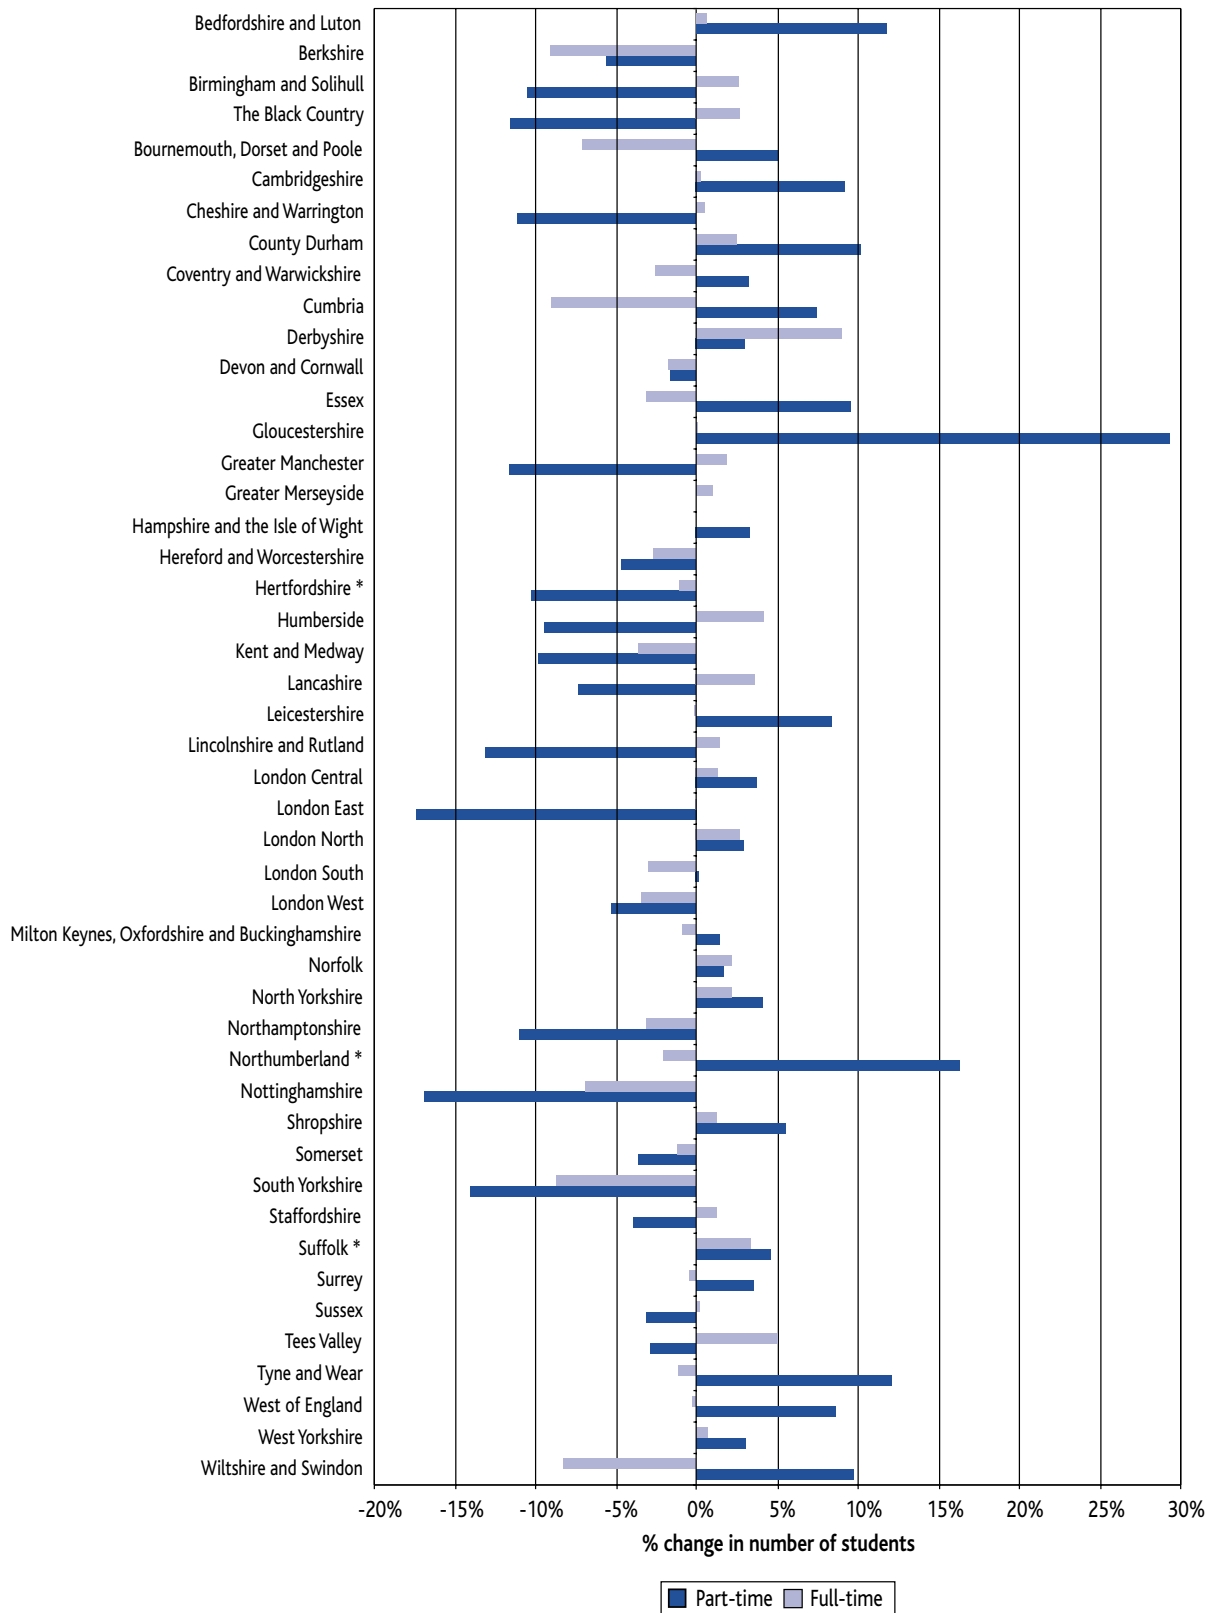

Figure 6. SS 2: Change in number of students 1998/99 to 1999/00  
Weighted average of sector colleges by local LSC

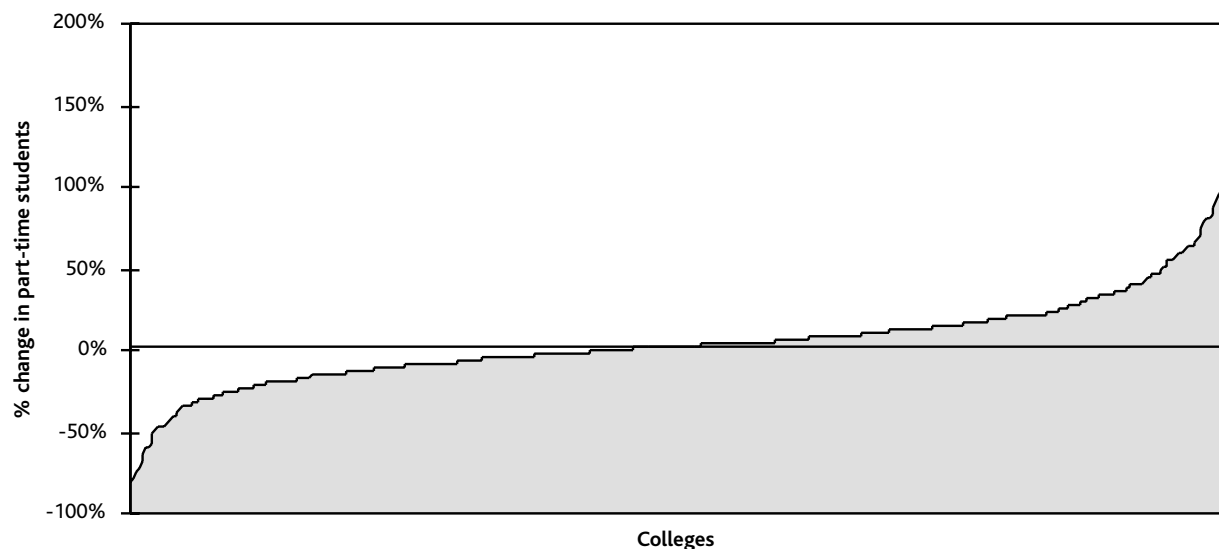

Notes:

\* mean calculated from fewer than four colleges

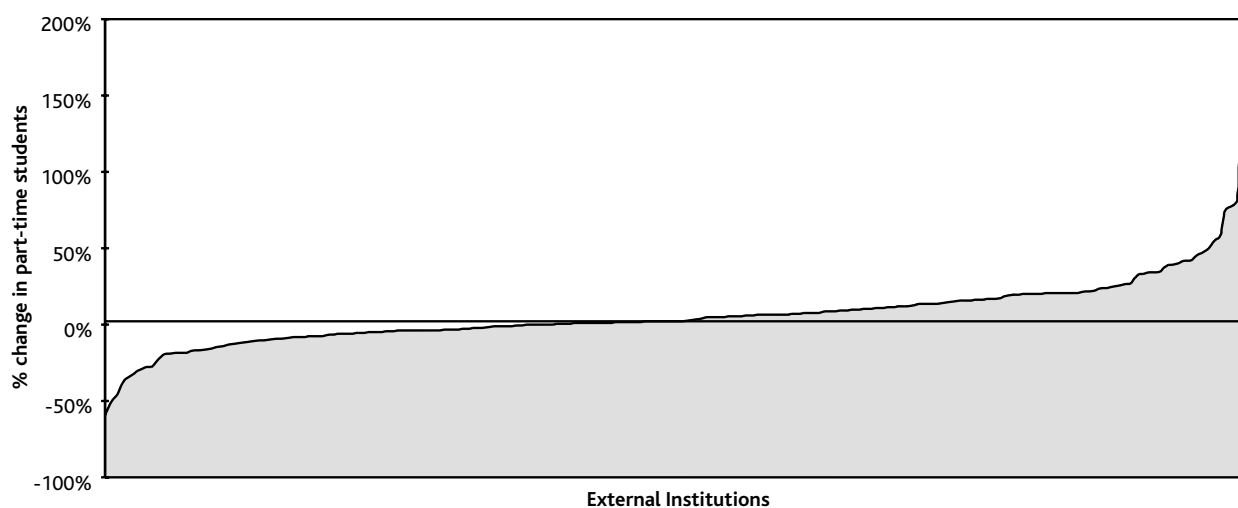

The variability in results between local LSCs is a consequence of the variation between some sector colleges

**Figure 7a. SS 2: Change in part-time students 1998/99 to 1999/2000.  
Range of college results**

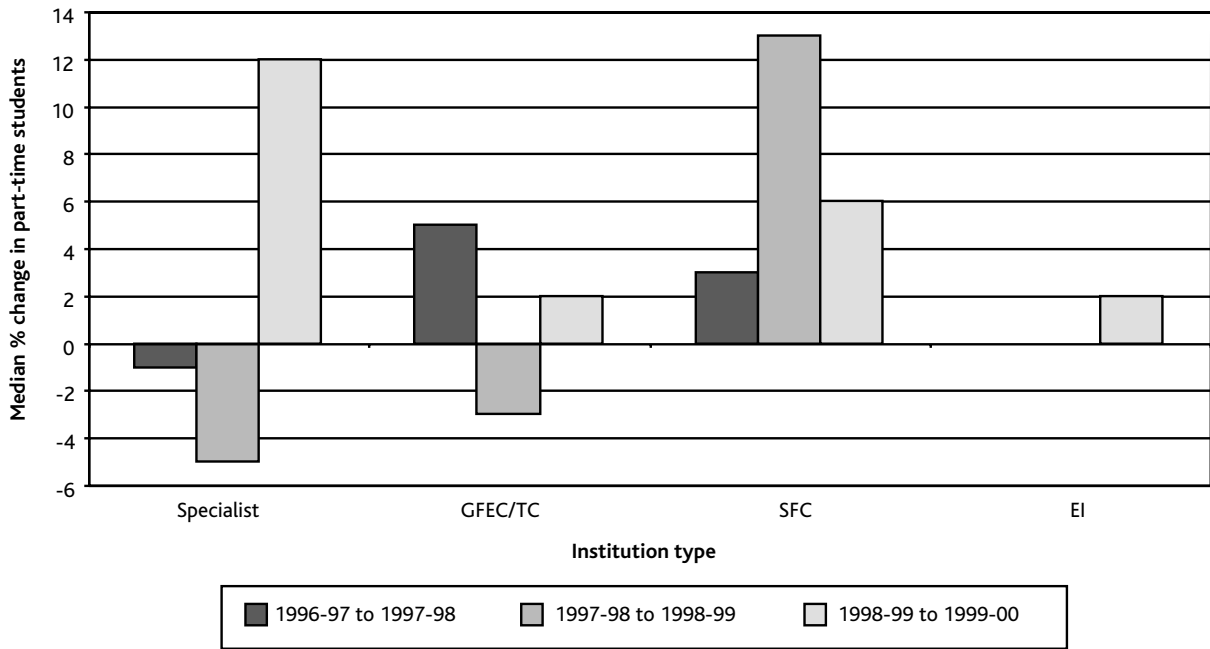

*Note:* 4 colleges are excluded as their change in part-time student numbers between 1998/99 and 1999/2000 was over 200%. These were mainly sixth form colleges with a relatively small number of part-time students resulting in a large percentage change between the two years.

**Figure 7b. SS 2: Change in part-time students 1998/99 to 1999/2000.  
Range of external institution results**

*Note:* 1 institution is excluded as its change in part-time student numbers between 1998/99 and 1999/2000 was over 200%.

Figure 8. SS 2: Change in part-time students 1998/99 to 1999/2000.  
Median value by institution type

## SS 3: In-year Retention Rates

### Purpose

18 To provide an indication of the effectiveness of an institution's teaching, and guidance and support process, as measured by the retention of students on their learning programmes.

### Description

19 The percentage of those students who, having enrolled on a learning programme of at least 12 weeks duration, continue to attend at the end of the qualification or the end of the teaching year (31 July), whichever is sooner. Separate information is shown for full-time full-year (described as full-time), and full-time part-year and part-time students (jointly described as part-time). The statistic relates to provision funded wholly or partly by the Council.

20 Where a student transfers from one qualification to another within the institution during the teaching year, the qualification the student has transferred from is ignored for the purpose of calculating the student's retention status.

### Results and interpretation

21 The calculated in-year retention rate takes account of the number of students withdrawing from all their qualifications within any one teaching year, rather than over the whole programme where students are studying on a programme longer than one year.

22 The results for SS 3 are summarised in table 3. The median sector college in-year retention rate in 1999/2000 was 87% for full-time students and 84% for part-time students. In both cases the median retention rate is the same as those recorded for 1998/99 and

1997/98. The median external institution retention rate was 97% for full-time students and 80% for part-time students; the median full-time retention rate is strongly influenced by the low numbers of full-time students.

23 In 1999/2000 the range of sector college in-year retention rates was very similar to previous years with the middle 50% of colleges having a full-time in-year retention rate of between 83% and 90% and a part-time in-year retention rate of between 79% and 88% (see figures 10a and 13a). The retention rates for the middle 50% of external institutions ranged between 84% and 100% for full-time students and between 74% and 85% for part-time students.

24 Rates continue to vary by type of institution. Full-time in-year retention rates remain slightly lower in general further education and tertiary colleges than in other institutions. For part-time students, the median college in-year retention rate continues to be lower in sixth form colleges, at 79%, than in other types of colleges (see figures 11 and 14). This figure is unchanged from 1998/99 and 1997/98.

25 Although in-year retention rates have remained stable for the past three years for most sector colleges, those colleges with the lowest retention rates in 1998/99 have improved the retention rates of their students. For example, in 1998/99, a quarter of colleges had an in-year retention rate for their part-time students of less than 79%. Typically, this group of colleges have improved their retention rate for part time students in 1999/2000 by 3 percentage points.

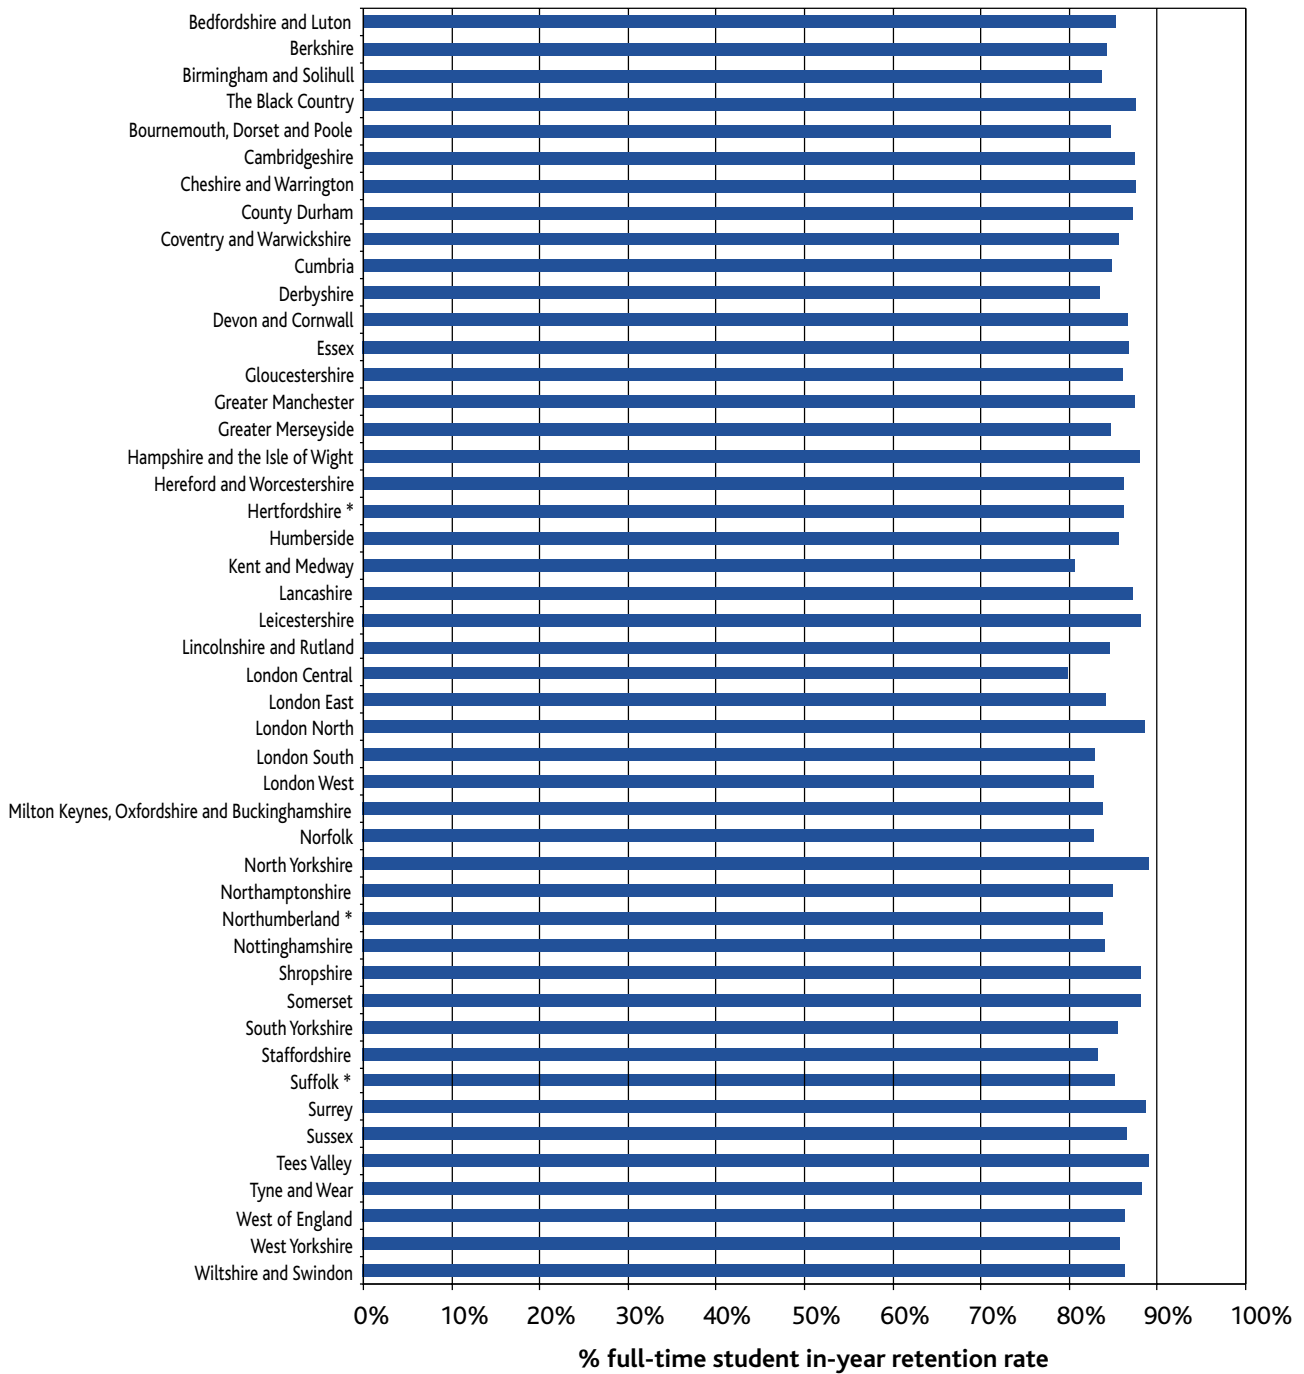

Figure 10. SS 3: Full-time student in-year retention rate 1999/2000 by institution type

Note: interpretation of figure 11 is as follows, taking sixth form college in-year retention rates in 1999/2000 as an example. The median sixth form college in-year retention rate was 92%, that is half of sixth form colleges had an in-year retention rate for full-time students of 92% or more. The middle 50% of sixth form colleges had a full-time in-year retention rate within the range 90 to 94%. The highest and lowest in-year retention rates were 100% and 76% respectively.

## SS 4: Achievement Rates

### Purpose

26 To provide an indication of the effectiveness of an institution in enabling students to attain their learning goals. SS 4 shows the achievements of students at the completion of their learning programmes. Achievement is measured in relation to qualification aims.

### Description

27 The total number of qualification aims achieved, expressed as a percentage of the total number of qualification aims for which students have completed the learning programmes. Results are shown by three categories determined by the total guided learning hours (glh) of the qualification: 9-59 glh (short), 60-119 glh (medium), and 120 or more glh (long). The statistic relates to provision funded wholly or partly by the Council.

### Interpretation

28 Where a student has achieved at least half the credits or modules towards a qualification aim, this is counted as a half achievement in calculating the total number of qualification aims achieved.

29 If a student completes more than one qualification then each qualification counts as a separate achievement in this statistic. For example, a student who completed three GCE A levels would count three times in this statistic, with the achievement of each A level shown separately. A student completing two units of a GNVQ and continuing with their studies would not be included in this statistic until they had completed their whole qualification.

30 All completed qualifications with a known outcome are included in the calculation. The statistic is not, therefore, comparable with the national performance tables published by the DfEE each year, which relate to a specific set of qualifications such as GCE 'A' levels, GCSEs and advanced GNVQs, for 16 to 18 year olds students.

31 In some institutions the nature of their provision means that there are a number of completed qualifications where the outcome is not known until some time after the course end date. For example, students studying NVQs may continue to demonstrate their competencies and submit their portfolios after the course end date, and actually achieve the qualification after the returns on which the achievement rates are calculated have been made by the institution. These qualifications are excluded from the calculation of achievement rate.

32 Examples of short qualifications commonly offered by institutions, that is those of between 9 and 59 glh in length, are First Aid at Work Certificate, Basic Food Hygiene Certificate and Computer Literacy and Information Technology. Popular qualifications of medium length, that is those of between 60 and 119 glh in length, are word processing qualifications and foundation level IT qualifications. Longer qualifications, that is those of more than 120 glh in length, include most GCE AS and A levels, advanced GNVQs and level 3 NVQs and other level 3 qualifications, and many level 2 qualifications.

### Results

33 The results are summarised in table 4. The upward trend in achievement rates has been maintained in 1999/2000. The qualification achievement rate for the median sector college in 1999/2000 for all qualifications was 77%,

one percentage point higher than 1998/99 and two percentage points higher than in 1997/98. The median achievement rate for external institutions was 77%.

34 The median achievement rate for sector colleges is highest for long qualifications, at 81% in 1999/2000, and lowest for medium length qualifications, at 73% in 1999/2000. For external institutions the median achievement rate is also highest for long courses at 83% in 1998/99 but is lowest for short courses at 74%.

35 The improvement in achievement rates have been the greatest in those sector colleges which had lowest achievement 1998/99. For example, in 1998/99, a quarter of colleges had an achievement rate for all qualifications of less than 68%. Typically, this group of colleges have improved their achievement rate between 1998/99 and 1999/2000 by 7 percentage points.

36 The increases registered by individual sector colleges reflect a mixture of factors including improvements in achievement rates, improved recording of achievements, and a change in the mix of qualifications. There continues to be a wide range of college achievement rates although this has reduced since 1997/98 as colleges with the lowest achievement rates make significant improvements. For example, in 1997/98 a quarter of colleges had an achievement rate for long qualifications below 67%. This had improved to an achievement rate of 73% in 1999/2000.

37 The median achievement rate continues to vary significantly by type of college as well as between qualifications of different lengths (see figures 17, 20 and 23) although this difference is also reducing particularly for general further education and tertiary colleges. In 1999/2000 the median achievement rate for all

qualifications ranged from 85% in sixth form colleges, and 82% in specialist art and design and performing arts colleges and agriculture and horticulture colleges to 76% in external institutions and 73% in general further education and tertiary colleges. The median overall achievement rate in general further education and tertiary colleges increased by one percentage point between 1998/99 and 1999/2000 and by four percentage points over the period 1997/98 to 1999/2000.

38 Analysis has shown that the decrease in the median external institution achievement rate is due to two factors:

- i. institutions for which data was published in 1998/99 have shown a reduction in achievement rate by two percentage points
- ii. thirty institutions which carried footnotes in 1998/99 now have acceptable data and the median college achievement rate for this group was significantly below that of other external institutions.

39 Research carried out for the FEFC's widening participation committee showed that achievement rates for colleges recruiting a very high percentage of their students from areas with high levels of deprivation are significantly lower than for other colleges. Supporting information is shown, therefore, in the listings at annex C, to indicate by broad band the proportion of students recruited by each institution from deprived areas.

40 The range of achievement rates in colleges for qualifications of different lengths is also narrowing (see figure 28). This is likely to be due, at least in part, to colleges improving their recording of achievements for short and medium length qualifications.

## Data Quality

41 There have been a number of improvements to the quality of sector colleges' achievement data as described below.

42 A supplement to *Performance Indicators 1998/99: Further Education in England* was published in February 2001 containing revised results for 92 colleges. The revisions were mainly to colleges' achievement rates where colleges had resubmitted their final ISR return for 1998/99 as a result of capturing more student outcomes.

43 A new code to record outcomes where the student had completed the learning activities leading to a qualification but not yet taken the exam was introduced in the ISR from 1997/98. A small number of colleges used this code extensively in their 1999/2000 ISR data and have been asked by the Council to re-check their results. In these cases a footnote 'no agreed data' is shown instead of a calculated achievement rate in the listings at annex C. Revised figures will be included in a supplement to this publication to be published towards the end of 2001.

The variability in results between local LSCs is a consequence of the variation between some sector colleges

Figure 27. SS4: Achievement rates: summary by length of qualification

## SS 5: Contribution to the National Learning Targets

### Purpose

44 To provide a measure of the number of students attaining one of the national learning targets by achieving an NVQ or equivalent at the appropriate level.

### Description

45 SS 5 is made up of three elements:

- a. targets for young people: the number of 16 to 19 year olds achieving a level 2 qualification (NVQ 2 or equivalent) in the teaching year;
- b. targets for young people: the number of 16 to 21 year olds achieving a level 3 qualifications (NVQ 3 or equivalent) in the teaching year;
- c. targets for adults: the number of adults achieving a level 3 or level 4 qualification (NVQ 3 or equivalent or qualifications at higher level) in the teaching year.

The statistic relates to all provision at the institution.

### Results and interpretation

46 SS 5 provides a measure of the volume of activity at each institution which directly contributes to the national targets for education and training. During 1998 the DfEE reviewed the national targets. New targets were announced in October 1998. The relevant targets for the further education sector remained unchanged in their definition for 1999/2000.

47 The number of students of a particular age-group qualified to NVQ level 2 or 3 or

equivalent varies between institutions according to their size and the nature of their provision. For example, many general further education colleges and external institutions provide programmes for students at or below NVQ level 1 or equivalent or below such as basic skills training in numeracy and literacy. This kind of provision does not count directly towards the national learning targets.

48 The results are summarised in table 5. The estimated total contribution of further education sector colleges to the national targets in 1999/2000 was as follows:

- 65,200\* students aged between 16 and 18 achieved NVQ level 2 or equivalent in 1999/2000. This compares with 64,000 in 1998/99 and 63,100 in 1997/98
- 135,600\* students aged between 16 and 20 achieved NVQ level 3 or equivalent in 1999/2000. This compares with 132,000 in 1998/99 and 129,400 in 1997/98
- 118,800\* students aged 21 and over achieved NVQ level 3 or equivalent in 1999/2000. This compares with a figure of 112,200 in 1998/99 and 110,400 in 1997/98.

*\* estimated value taking into account colleges who have not submitted data*

49 The calculation takes into account students' prior qualifications, where these are available. For example, where a young person has previously achieved two GCSEs at grades A-C and achieves another three at the college, then this will only count towards part (a) of the statistic, that is foundation target 1, if the students' prior qualifications have been recorded.

# Annex C: Summary Statistics 1999/2000 and 1998/1999 by institution

---

1 This annex contains summary statistics for 1998/99 and 1999/2000 listed by individual institution. Institutions are shown alphabetically within local Learning and Skills Council office areas and by six types (agriculture and horticulture; art, design and performing arts; specialist designated; general further education and tertiary, sixth form college and external institutions).

2 In addition to the results of summary statistics 1 to 5, the following contextual information is shown for each institution:

- the number of full-time and part-time students at the institution in 1999/2000 on Council-funded provision, to assist with the interpretation of SS 2 (change in student numbers) in particular, but also to contextualise the other statistics. For example, this shows that in some sixth form colleges the number of part-time students is small, also that the number of full-time students in external institutions can be very small leading to very high rates of retention or achievement
- the proportion of students the institution recruits from areas of deprivation which attract additional funding from the Council for widening participation. The Council provides additional funding in recognition of the additional resources required to recruit and retain students living in areas with high levels of deprivation. Institutions have been categorised into four broad groups:

- institutions recruiting a relatively low percentage of their students from deprived areas (less than 15% of their students)
- institutions recruiting around the average for the further education sector (between 15% and 35% of their students)
- institutions recruiting a relatively high percentage of their students from deprived areas (between 35% and 50% of their students)
- institutions recruiting a very high percentage of their students from deprived areas (over 50% of their students)

Further details of the definition are shown in annex D

- the average level of funding (ALF) the institution received from the FEFCI in 1999/2000.

3 At the bottom of each page, comparative information of the median for each of the statistics is shown for the sector as a whole, for each of the three broad types of college and for external institutions

4 For the majority of colleges and external institutions, all five summary statistics are shown. It has not been possible to calculate any summary statistics for 1999/2000 for 18 sector colleges and 11 external institutions.

#### Notes

\*see notes on page 113

a. subject to minor revision  
e. fewer than five students

b. agreed data not available  
f. not applicable

c. significant underestimate  
g. achievements not fully recorded

d. greater than 1000%

## Notes to Tables – Mergers and Transfers

1 Summary statistics are shown separately for the following colleges and external institutions which merged during the 1999/2000 teaching year:

Phoenix College merged with Merton College

2 Summary statistics for the following colleges and external institutions which merged during the 1999/2000 teaching year have been calculated for 1998/99 and 1999/2000 from combined data:

Charles Keene College of Further Education and Leicester South Fields College, merged to form Leicester College

Pershore and Hindlip College and Holme Lacy College, merged to form Pershore Group of Colleges.

Bilston Community College and Wulfrun College, merged to form Wolverhampton College

Guthlaxton Community College merged with Leicestershire South Consortium

Lambeth Community Education - Grants to Voluntary Organisations and Lambeth Community Education - Statutory Provisions merged with Lambeth College

Kirkley Hall College merged with Northumberland College

Tamworth Adult Education Consortium merged with Tamworth and Lichfield College

North Yorkshire County Council (Stokesley), North Yorkshire Country Council (Catterick), North Yorkshire County Council (Bedale), North Yorkshire

County Council (Malton) and North Yorkshire County Council (Thirsk) separate funding allocations merged to form a single allocation for North Yorkshire County Council

Suffolk CC Education Dept (SC), Suffolk CC Education Dept (LC) and Suffolk CC Education Dept (WS) separate funding allocations merged to form a single allocation for Suffolk CC Education Dept

3 Summary statistics are shown separately for the following colleges and external institutions which merged on or after 1 August 2000:

Walford College and North Shropshire College merged to form Walford and North Shropshire College

Brooksby College and Melton Mowbray College merged to form Brooksby Melton College

Trowbridge College, Chippenham College and Lackham College merged to form Wiltshire College

Abingdon College and West Oxfordshire College merged to form Abingdon and Witney College

Moorland Adult Education merged with Leek College of Further Education and School of Art

Nene Valley Adult Community College, South Northants Adult Education and Uplands AE merged with Northamptonshire LEA: Lifelong Learning Services

College of Care and Early Education merged with City of Bristol College

Cannock Adult Education Consortium merged with Cannock Chase Technical College

**Annex C:** Summary statistics 1999/2000 and 1998/99 by institution

North Somerset Community Education merged with Weston College

Barnet College merged with Hendon College

Newcastle-Under-Lyme Adult Education Consortium merged with Newcastle-Under-Lyme College

4 Summary statistics for the following colleges which merged on or after 1 August 2000 have been calculated for 1999/2000 from combined data:

Rutland College merged with Tresham Institute

Westminster College and Kingsway College merged to form Westminster Kingsway College

5 Summary statistics for Basford Hall College, Clarendon College and High Pavement Sixth Form College (merged prior to the 1999/2000 teaching year) and Arnold and Carlton College (merged during the 1999/2000 teaching year) are shown combined under New College, Nottingham.

# Annex D: Definitions and Sources

---

1 This annex sets out, for each of the five summary statistics and supporting information, a detailed description, list of sources and method of calculation for 1998/99 and 1999/2000. The 1997/98 summary statistics described in this publication have been calculated by the same method using similar sources. All the summary statistics except SS 5 (contribution to the national targets) relate to provision at the institution which is funded or partly funded by the Council. SS 5 relates to all provision at the institution. Council-funded provision includes part-funded youth training and European Social Fund provision.

## SS 1: Achievement of Funding Target

### Description

2 The number of Council-funded units of activity, that is, funding units, earned by an institution in the teaching year, as a percentage of its target funding units for the year, including New Deal funding and basic skills summer schools (BSSS), where separate funding agreements were agreed.

### Sources

- 3 Funding units generated in the year: the institution's final funding unit claim for the year. In most cases this information has been verified by the institution's external auditors.
- 4 Target funding units: the target funding units for the year as set out in the funding agreement between the institution and the Council.

### Calculation

$(\text{funding units generated} / \text{target funding units}) \times 100$

## SS 2: Change in Student Numbers

### Description

5 The percentage change in student numbers between the current and previous year. Student numbers for 1999/2000 are also shown to provide a context for this and other statistics.

6 Student numbers are divided between two modes of attendance full-time, which relates to full-time full-year students, and part-time, which includes full-time part-year and part-time students.

### Sources

7 1999/2000, 1998/99 and 1997/98 student numbers:

December 2000, December 1999 and December 1998 individualised student record (ISR) returns respectively.

### Calculation

8 Full-time full-year, full-time part-year and part-time student numbers are defined according to the number of guided learning hours the student is studying in the teaching year for all their qualifications. A student is considered to be full-time full-year for statistical purposes if they are studying 450 or more guided learning hours (glh) a year. Those students who are not full-time full-year who are enrolled on programmes of at least 150 glh per tri-annual period (term), or more than 16 glh per week for shorter courses lasting only one period are defined as full-time part-year. All other students are defined as part-time.

9 Students are classified as Council-funded if they are enrolled on Council-funded provision for all of their qualifications or if they are enrolled on a mixture of Council-funded and non-Council funded qualifications, and the Council-funded qualifications have glh greater than or equal to the glh of the non-Council-funded qualifications. All other students are classified as non-Council-funded. All complementary studies qualifications are assumed to be Council-funded.

### SS 3: In-year Retention Rates

#### Description

10 The percentage of those students who, having enrolled on a learning programme of at least 12 weeks duration, continue to attend at the end of the qualification or the end of the teaching year (31 July), whichever is sooner. Separate information is shown for full-time full-year and part-time (including full-time part-year) students.

11 Where a student transfers from one qualification to another within the institution during the teaching year, the qualification the student has transferred from is ignored for the purpose of calculating the students' retention status.

#### Source

1999/2000: December 2000 ISR

1998/99: December 1999 ISR.

#### Calculation

12 Full-time full-year, full-time part-year and part-time student numbers are defined according to the number of guided learning hours the student is studying in the teaching year. A student is considered to be full-time

full-year for statistical purposes if they are studying 450 or more guided learning hours (glh) a year. Those students who are not full-time full-year who are enrolled on programmes of at least 150 glh per tri-annual period (term), or more than 16 glh per week for shorter courses lasting only one period are defined as full-time part-year. All other students are defined as part-time.

13 In-year retention rates are calculated for students on programmes of at least 12 weeks duration. Students studying more than one qualification are included where at least one qualification is of 12 weeks or more duration. Students studying a number of consecutive short courses which are each of length less than 12 weeks duration are excluded from the calculation. From 1997/98, qualifications which the student has transferred out of are excluded from the calculation of the student's retention status.

14 The retention status of each qualification is calculated from the completion status field in the ISR. Where a student is studying one qualification aim, their in-year retention rate status is determined by the continuation status of the qualification. If the student is continuing or completed the student is retained.

15 Where a student is studying more than one qualification, their in-year retention rate is determined by the continuation status of all their qualifications. Where the student withdrew from all their qualifications then the student is not retained. Similarly, if the student was continuing or has completed all their qualifications then they are counted as retained. Where the student withdrew from some of their qualifications, but is continuing at least one qualification of more than one week's duration, the student is counted as retained. If the student has completed one or more qualifications of more than one week's

duration, but withdrew from their other qualifications then the following calculation is carried out. The student is counted as retained if the latest withdrawal date falls on or before the latest completion date or no more than two months after the latest completion date.

16 At institution level, SS 3:

$$\text{full-time in-year retention rate} = \frac{\text{(total retained full-time students on programmes of at least 12 weeks)}}{\text{(total full-time students on programmes of at least 12 weeks)}} \times 100$$

$$\text{part-time in-year retention rate} = \frac{\text{(total retained part-time students on programmes of at least 12 weeks)}}{\text{(total part-time students on programmes of at least 12 weeks)}} \times 100$$

## Explanation

17 Qualifications of up to one week's duration are excluded from the calculation so that retention rates are not distorted in cases where a student withdraws from all of their qualifications except those which are very short.

18 Two examples are shown below to demonstrate how a student's retention is calculated when they withdraw from some qualifications, but complete others.

Example 1: a student is enrolled on four qualifications each of more than 12 weeks in length, of which three are GCE A levels. The student completes their three A levels in June, and then withdraws from their fourth qualification before the end of the teaching year. Comparing

the latest withdrawal date with the latest completion date shows that less than two months has elapsed, so the student is counted as retained

Example 2: a student is enrolled on three qualifications each of more than 12 weeks in length, and one short qualification of just over one week's duration. The student completes the short qualification in December, and then withdraws from all their remaining qualifications in March. Comparing the latest withdrawal date with the latest completion date shows that more than two months has elapsed, so the student is counted as withdrawn.

## SS 4 Achievement Rates

### Description

19 The total number of qualification aims achieved, expressed as a percentage of the total number of qualification aims for which students have completed the learning programmes. Where a student has achieved at least half the credits or modules towards a qualification aim, this is counted as a half achievement in calculating the total number of qualification aims achieved. Results are shown by three categories determined by the total glh of the qualification: 9-59 glh, 60-119 glh, and 120 or more glh.

### Source

1999/2000: December 2000 ISR

1998/99: December 1999 ISR.

## Calculation

20 SS 4 is calculated at the qualification aim level, in contrast to SS 2 and SS 3 which are calculated at the student level. For each completed qualification, the ISR is analysed to calculate whether the qualification was fully achieved or partially achieved. Partially achieved qualifications are counted as half an achieved qualification. In some cases qualifications can be fully achieved even though achievement funding is not available under the Council's funding methodology. These cases are included.

21 The coverage of SS 4 is as follows:

- a. qualifications which are complementary studies are excluded;
- b. qualifications which were completed before the expected end date are included, while those which extend beyond the expected end date and are not yet completed are excluded;
- c. qualifications for which the outcome is not known are excluded from the calculation. This can be either because the exam has been taken but the result is not yet known, and there is an intention to take the exam or because the exam has not yet been taken.

22 At institution level, SS 4:

percentage of qualification aims achieved=  
$$\frac{\text{(number of fully achieved qualifications + 1/2 number of partially achieved qualifications)}}{\text{(number of completed qualifications with a known outcome)}} \times 100$$

for each of the three gln bands of qualifications described above, and for all qualifications together.

## SS 5: Contribution to the National Targets

### Description

23 SS 5 is made up of three elements:

- a. targets for young people: the number of 16 to 19 year olds achieving a level 2 qualification (NVQ 2 or equivalent) in the teaching year;
- b. targets for young people: the number of 16 to 21 year olds achieving a level 3 qualifications (NVQ 3 or equivalent) in the teaching year;
- c. targets for adults: the number of adults achieving a level 3 or level 4 qualification (NVQ 3 or equivalent or qualifications at higher education level) in the teaching year.

The statistic relates to all provision at the institution.

### Source

1999/2000: December 2000 ISR

1998/99: December 1999 ISR.

### Calculation

24 The age of each student is calculated as at 31 August of the teaching year from the student's date of birth. The age groups for each of the statistics are interpreted as aged 16 to 18 at the start of the teaching year for part (a), as aged 16 to 20 at the start of the teaching year for part (b), and as aged 21 and over at the start of the teaching year for part (c).

25 Where available, the qualifications on entry of the student are taken into consideration to determine the attainment level of the student at the start of their

qualification. The student's achievements in the relevant teaching year are added to their attainment level on entry, where this is available. Where a student has achieved level 2 or level 3 or equivalent, and had not done so on entry, then the student has achieved the relevant national target. Higher level (levels 4 and 5) qualifications achieved are included in part (c) of the statistic where the student was previously at a lower level.

26 So, for example, a student entering the institution with three GCSEs at grades A-C is calculated as being 60% towards a level 2 qualification, because five GCSEs at grades A-C are equivalent to an NVQ at level 2. The student then achieves three GCSEs at the institution during 1998/99, and so attains a level 2 qualification.

27 All qualifications which are equivalent to the relevant NVQ level are included in the calculation by using the notional NVQ level of qualifications which are not NVQs or GNVQs. Notional levels were assigned to qualifications through a joint project between the Further Education Funding Council, the former National Council for Vocational Qualifications (NCVQ) and the Department for Education and Employment (DfEE) for the purpose of measuring national targets.

## Supporting Data: Widening Participation

28 The proportion of students the institution recruits from areas of deprivation which attract additional funding from the Council for widening participation is shown as supporting data to assist with the interpretation of the summary statistics. The Council provides additional funding in recognition of the additional resources required to recruit and retain students living in areas with high levels

of deprivation. Institutions have been categorised into four broad groups:

- a. institutions recruiting a relatively low percentage of their students from deprived areas (less than 15% of their students);
- b. institutions recruiting around the average for the further education sector (between 15% and 35% of their students);
- c. institutions recruiting a relatively high percentage of their students from deprived areas (between 35% and 50% of their students);
- d. institutions recruiting a very high percentage of their students from deprived areas (over 50% of their students).

29 As recommended by the widening participation committee, this is a proxy for students likely to have low levels of prior attainment and to live in economically and socially disadvantaged areas.

30 The banding for each institution is calculated from the information provided by institutions about the home addresses of their students in 1999/2000. The home postcode of each student is allocated to a local authority ward and all students living in an area with a high Department of the Environment Transport and the Regions (DETR) index of local conditions are eligible for a funding uplift.

## Supporting Data: Funded Average Level of Funding (ALF)

31 A sixth indicator relating to out-turn average level of funding (ALF) has been removed from the FEFC performance indicators from 1997/98 onwards. This reflects

the withdrawal of demand-led element (DLE) funding from 1997/98, which meant that the out-turn and funded ALF for an institution would be very similar under normal circumstances.

32 The funded ALF is not within the control of an institution and so cannot replace out-turn ALF as a measure of performance. Accordingly, funded ALF for the institution's main allocation for 1999/2000 is shown as supporting information. This is an institution's main recurrent funding allocation from the Council for the teaching year divided by the target number of funding units to be generated by the institution in respect of Council-funded activity in the teaching year.

### **Credibility Checks**

33 Each year the Council carries out a series of credibility checks on each institution's summary statistics. Most of the checks are on the summary statistics relating to retention and achievement. They include checks on whether the level of retention and achievement is exceptionally high or low, the change in retention and achievement rates from the previous year, the number of partial achievements and the number of qualifications where the outcome is not known. Where necessary credibility queries are raised with institutions prior to publication to determine whether there are particular reasons why the statistic for the institution lies outside the range of most other institutions of a similar type.

# Annex E: Alphabetical list of institutions

Institution	Local LSC	Type
Abingdon College	Milton Keynes, Oxfordshire and Buckinghamshire	GFEC
