## Summary

In its proposed framework for validating Ofqual-regulated assessments, Ofqual identifies four key areas of evidence on which validity arguments should be based. One key area is the alignment between assessment and the curriculum/syllabus. The work reported here demonstrates a method for producing a source of validity evidence that falls under this category: the comparison of the intended and achieved weightings of assessment objectives at qualification and question paper level. Screening data was produced at unit-subject level for the majority of AQA GCSE and A-level specifications while six individual specifications were further analysed at the question-unit level. Where problems with achieved weightings occurred, some possible issues - both general to common assessment structures and paper-specific - were identified that could be fed back into the specification design and examination paper-writing processes. The complexities of interpreting and improving the achieved weightings of assessment objectives, in a context in which they are only one of a number of interrelated facets of validity, are discussed.

## Introduction

Validity is the concern that any inferences made from, or actions based on, the results obtained from a measurement instrument are supported by theory and evidence. Validity is a matter of degree and it is attached to the uses of the measurement instrument, rather than the instrument itself. Thus, for example, there may be a strong validity argument for using a given test to select applicants for entry to one occupation but a much weaker argument for using it to select for entry to another occupation.

In its proposed framework for validating Ofqual-regulated assessments, Ofqual identifies four key areas of evidence on which validity arguments should be based. The work reported here addresses a potential source of validity evidence that falls under category 1: Alignment between assessment and the curriculum/syllabus. The intended weightings of assessment objectives reflect the relative importance placed on them by those setting the subject criteria and examining the subject. The intended weightings are normally reflected in the number of marks assigned to each assessment objective; however, there are various factors that can result in the achieved weightings being different. If the achieved weightings are very different from those intended, the most successful candidates may not be those who achieve the intended balance of knowledge and skills but rather those whose performances are biased towards certain types of knowledge or skills. ${ }^{1}$ This would constitute a threat to the use of the assessment for certification per se as well as to subsequent selection decisions by employers and higher education institutions.

The subject criteria for general qualifications specify assessment objectives for the subject including lower and upper limits on the proportion of marks that must be dedicated to them. The choice of assessment objectives and the intended weight given to them in the examination are matters of validity; however, assuming that the assessment objectives and their intended weightings are valid for the purposes of the qualification, it remains possible that the weightings achieved in each assessment and in the qualification overall are not those intended. For example, if an assessment objective is tested on a disproportionate number of relatively easy - or difficult - questions, candidates' scores on

[^0]those questions may be homogeneous and therefore will not contribute to candidates' final rankings as much as if the questions had produced a greater spread of marks. Similarly, certain types or lengths of question may provide greater discrimination between candidates and will therefore achieve greater weight. If particular assessment objectives are associated with particular types or lengths of questions, there is a risk that the achieved weight of the assessment objectives is not as intended. The same could be true of types of assessment. Candidates typically perform better at coursework and practical assessments than at external examinations, resulting in negatively skewed distributions of marks. Where this results in a compressed range of marks, relative to the externally assessed unit(s), the coursework may fail to meet its intended weighting. Consequently, any assessment objectives that are overrepresented in the coursework unit will be underweighted in the overall assessment.

The work reported here investigates the achieved weightings of assessment objectives in GCSE and A-level qualifications. There are two levels at which achieved weightings of assessment objectives can be analysed: firstly, in relation to the achieved weightings of units at qualification level; secondly, in relation to the achieved weightings of questions at unit level. For a full understanding of the achieved weightings of assessment objectives, the two levels of analysis must be considered. Here, we report the first level of analysis for the vast majority of AQA GCSEs and A-levels and follow this up with analyses at the second level for a selection of specifications at GCSE and A-level, including some in key subjects such as Maths and Science, as well as specifications identified as potentially problematic in the first level analyses. In the absence of a central electronic system that routinely links assessment objectives with individual questions, the work must be done ad hoc and manually from paper records; therefore, the second-level analyses are, necessarily, more limited in number. To make this a routine exercise, data on the intended associations between questions, or part-questions, and the assessment objectives need to be collected as a matter of routine in some authoritative way, such as from Principal Examiners or item writers and test constructors, depending on the process.

The purpose of the study is twofold: 1) to explore the achieved weighting of assessment objectives as a facet of validity and to establish a method for investigating and reporting on it; 2) where problems with achieved weightings are identified, to consider the possible causes and solutions that may be fed back into the specification design and examination paper-writing processes.

## Method

The method used in this study is a potential screening device for identifying examinations in which the intended achieved weights of the assessment objectives are not achieved. Currently, the achieved weightings of units are calculated routinely. The intended weights of assessment objectives for each unit are contained in the specifications and could easily be combined with the unit weighting analysis to describe the weighting of assessment objectives at subject level via the unit weightings. This analysis assumes that, within each unit, the assessment objectives have achieved their intended weights. It is possible that, within a unit, a given assessment objective is over- or underweighted. This could potentially offset or exacerbate the effects of an imbalance in the weighting of units.

Thanks to computerised item-level marking, question-level data is increasingly available for GCSE and A-level units. The intended weightings of assessment objectives at question level are not systematically recorded or collected currently; future implementation of this could lead to the questionlevel analysis of assessment objective weightings being automated to describe the weighting of assessment objectives at unit level via the question weightings.

Qualifications could be screened at both unit-subject and question-unit level to identify instances where the achieved weights of assessment objectives are persistently and unacceptably greater or
less than intended. This report will present the full screening evidence, provide some commentary on particular specifications where appropriate, and look in detail at six cases where interesting effects were seen.

For efficiency's sake, the specifications subjected to question-level analyses consist of units for which item level data is electronically captured at the time of marking. This is necessary to analyse the weighting of questions within units. Using mark schemes, the assessment objectives addressed by items are identified and their achieved weightings calculated at unit and qualification levels. For coursework and controlled assessment units, item level data is not available, so the analysis can only address the weighting of the unit at qualification level but not the weighting of questions at unit level.

The formula for calculating the achieved weighting of units (and thereby their assessment objectives) at qualification level is:

$$
\text { Achieved Weight }=\frac{\mathbf{r c t} \times \mathbf{s c} \times 100}{\boldsymbol{s t}}
$$

where $\quad \mathbf{r c t}=$ part-with-whole correlation coefficient between unit marks ${ }^{2}$ and the total marks
$\mathbf{S C}=$ standard deviation of unit marks
st - standard deviation of total marks.
For calculating the achieved weights of questions (and thereby their assessment objectives) at unit level, substitute "item marks" for "unit marks" and "total unit marks" for "total marks".

This equation combines two factors associated with the weight a unit achieves. The part-with-whole correlation coefficient measures the relationship between candidates' marks on a single unit and the total of their marks over all the units. The higher the correlation, the more closely the rank order on the unit resembles the final rank order, thus the greater its influence on the total marks; or, the greater its achieved weighting is. The relative standard deviations of the unit marks also affect the achieved weights of the units. The unit with the greater standard deviation of marks has a greater effect on the final rank order (assuming the correlations between the unit marks and the total marks are the same).

Whilst test developers can exert the most control over achieved weightings at the item level, there is a lot that can occur during the grading, scaling and aggregation process that can distort these values in a potentially unanticipated manner. Where an assessment is anything more than the simplest design, such as linear scaling and no optional routes (including different tiers), interpreting the achieved weightings and evaluating the impact on them of changing the assessment becomes challenging. For example, if a raw mark grade boundary were placed one mark differently, this would affect the spread of marks because it is the spread of uniform marks that becomes important or, if more foundation tier candidates were capped in a given series, this would affect the unit-subject correlation and could, therefore, impact on the achieved weight.

[^1]
## A note on tiered units

The intended weight of a unit is defined as the percentage of the total uniform marks available for a specification that can be obtained from the unit in question. For example, in a typical GCSE with a specification level maximum uniform mark of 200, units with maximum uniform marks of 80 and 120 have intended weights of $40 \%$ and $60 \%$, respectively. For GCSE specifications containing tiered units, this definition is undermined, since, following the description provided above, candidates sitting units at higher or foundation tiers have different unit level uniform marks available to them. This issue is discussed in detail by Stockford (2012). The approach taken to defining the intended weight for foundation tier units here follows his advice, which is to use the maximum uniform marks available for the equivalent higher tier unit. This is a reasonable approach because the full range of uniform marks is available to every candidate prior to their choice of entry tier and it would be perverse to change the intended weight of the units - and, more importantly, the assessment objectives - according to that choice. Candidates entering for the foundation tier appropriately will not miss out on any marks available only on the higher tier, as they should, by definition, not be able to access them.

## Analyses Part 1: Unit-Specification Weightings

The analyses are presented separately for GCSE and A-level specifications. For each, there are two tables: one showing the intended and achieved weightings of assessment objectives by unit and another summarising the intended and achieved weightings at specification level.

Clearly, the ideal outcome is that the achieved weightings of the assessment objectives equal the intended weightings. What is difficult to judge is how significant any deviation from the intended weightings is. Should we be concerned with the absolute size of deviation? Or, if an assessment objective is intended to be weighted at $10 \%$ and achieves $8 \%$, should we be more worried than if an assessment objective intended to be weighted at $30 \%$ achieves $28 \%$ : a $20 \%$ difference compared with a $6.7 \%$ difference. In the summary tables (Table 38 and Table 40), the absolute differences have been flagged where they are not between -1 and 1 percentage points of the intended weight. The proportional differences have been flagged where they are not between $-10 \%$ and $10 \%$. Commentaries on subject routes with flags are provided where there are greater than 500 entries.

## Commentary on GCSE analysis (Table 37, Appendix 1, p. 79 and Table 38, Appendix 2, p.95)

These commentaries provide brief descriptions of the circumstances in which the achieved weights of units have led to the achieved weights of the assessment objectives falling outside of the tolerances specified above. They are to be read in conjunction with the tables and their intended audience comprises awarding organisation staff and examiners, so might require rather more unpacking for interested laypersons.

Applied Science (pages 80, 95) - The double award in Applied Science comprises three portfolio units intended to contribute a total weight of $65 \%$ and a written unit intended to contribute $35 \%$. The written paper (unit 2) is tiered and the most common route is the foundation paper (route 0), with greater than ten times the number of entries as the higher tier route. The achieved weight of the written paper is approximately $10 \%$ less than intended. The results is that AO1, which is associated mostly with the written paper, is underweighted, whilst AO3, associated mostly with portfolio units 3 and 4 , is overweighted. AO2 is spread more evenly across the four units and near-enough achieves its intended weight.

Additional Applied Science (pages 79, 95) - Additional Applied Science comprises two portfolio units intended to contribute a total weight of $60 \%$ and a written unit intended to contribute $40 \%$. The written paper (unit 2) is tiered and the most common route is the foundation paper (route 0), with
greater than six times the number of entries as the higher tier route. On both tiers, the achieved weight of the written paper is closer to $25 \%$ than to the intended $40 \%$. The distribution of assessment objectives is very similar to those in Applied Science and, consequently, AO1 is underweighted, AO2 correctly weighted, and AO3 overweighted.

Citizenship Studies (pages 81, 96) - The short course unit 1 (written) is underweighted whilst unit 2 (controlled assessment) is overweighted. AO1 is assessed in both units thus its overall weighting is satisfactory. In contrast, AO2 is measured only in unit 2 and is thus overweighted, whilst AO3 is measured only in unit 1 and is thus underweighted. These units are common to the full course and units 3 (written) and 4 (controlled assessment) mirror the assessment objectives and disparity of weightings of units 1 and 2 .

Dance (pages 82, 96) - Unit 1 (written) and unit 2 (externally assessed practical) are both underweighted whilst units 3 and 4 (controlled assessment) are both overweighted. The result of this is that AO1, which is concentrated heavily in the written paper, is underweighted whilst AO2 and, to a lesser degree, AO 3 , which are concentrated heavily in the controlled assessments, are overweighted.

Drama (pages 82, 96) - Unit 1 (written) achieves a higher weight than intended whilst unit 2 (controlled assessment) achieves a lower weight. AO1 is assessed in both units and achieves a slightly higher weight than intended. AO2 is assessed only in unit 2, so it is underweighted. AO3 is assessed only in unit 1 and is thus overweighted. AO2 is a practical skill and therefore can only be assessed in the practical unit. The key to achieving a more satisfactory balance is to improve the discrimination on unit 2 so that it contributes more to the rank order of candidates at subject level.

Human Health \& Physiology (pages 88, 98) - At both foundation and higher tier level, unit 1 (written) achieves a greater weight than intended whilst unit 2 (controlled assessment) achieves less than its intended weight. AO1 and, to a lesser extent, AO2 are concentrated in unit 1 and are thus overweigthed, whilst AO3, which is concentrated in unit 2, is underweighted. Again, because AO3 is practical in nature, its underweighting cannot be resolved by assessing it in the written unit; rather, the discrimination provided by the practical unit would need to increase.

Modern Foreign Languages (Table 37 from page 79, Table 38 from page 95) - The structure of MFLs is such that there is one unique assessment objective per unit. There is a general pattern across many of the language specifications in which AO1 (listening) and AO3 (reading) are underweighted whilst AO2 (speaking) and AO4 (writing) are overweighted. This is broadly true of: Bengali (route 3); French short course (route 0); French full course (routes 0, 1, 3); German full course (routes 0, 1, 2, 3); Italian (route 2); Panjabi (route 2); Polish (route 0); and Spanish full course (routes 0, 1, 3).

In the case of the purely higher tier route through French full course (route 2) the achieved weightings of the four assessment objectives are each within $1 \%$ of their intended weights. In the case of the purely higher tier route through Spanish full course (route 2) the achieved weightings of the assessment objectives are considerably closer to their intended weightings and, in contrast to other routes, AO1 and AO3 are slightly overweighed and AO2 and AO4 are slightly underweighted. Urdu (route 2) follows a similar pattern, except that AO1 is correctly weighted.

The data suggest that, generally, the speaking and writing assessments do more to discriminate between candidates in modern foreign language examinations than do listening and reading assessments. This appears to be especially true when one or both of the listening and reading assessments are taken at foundation tier level. It might be that this is an artefact of tiering - and analysing the data by route - so that an overall analysis of weightings, using uniform marks to combine the tiers, would eliminate this tendency for AO 1 and AO 3 to be overweighted at the expense of AO 2 and AO 4 .

PE (pages 90, 99) - Both the short course and the full course consist of a written unit (1) worth $40 \%$ and a controlled assessment unit (2) worth $60 \%$. In the short course, the written paper achieves less than its intended weight; consequently, AO1 - assessed exclusively by the written paper - and AO3 assessed predominantly by the written paper - are underweighted, whilst AO2 - assessed exclusively by the controlled assessment - is overweighted. In the full course, it is the controlled assessment that is underweighted, thus AO 1 is overweighted and AO 2 is underweighted. AO3 is approximately as intended.

## Commentary on A-level analysis (Table 39, Appendix 3, p. 103 and Table 40, Appendix 4, p.124)

There is a general point about A-levels that is worth making here. The AS and A2 units represent different standards, with the AS being less demanding than the A2. A consequence of this is that the AS units tend to discriminate between A-level candidates less well than the A2 units do and thus the intended 50:50 weighting of the AS:A2 is often imbalanced in favour of the A2 (see General Commentary on Analyses on page 10). Intentionally or not, the overweighting of the A2 is a characteristic of A-level design - it is a direct consequence of making the early units less demanding than the later ones - and it is not necessarily undesirable for the more challenging content to carry greater weight for the final A-level grade. It is a matter of judgement as to whether the deviation from the intended weighting of assessment objectives at specification level is acceptable. Only where assessment objectives are divided unevenly between AS and A2 might there be an issue.

Biology (pages 104, 124) / Chemistry (pages 105, 124) / Physics (pages 117, 128) - The sciences share a common structure, where the AS and A2 each comprise two written papers plus either teacher-assessed coursework (denoted by 3T/6T) or an externally assessed practical (denoted by $3 X / 6 X)$. There is a general pattern across the sciences of units 4 and 5 - the $A 2$ written papers achieving above their intended weights, leading to AO2 being overweighted at subject level. The unit 3s (AS coursework/practical) tend to be underweighted, leading to AO3 being underweighted at subject level. This tends to occur regardless of whether unit 3 is coursework ( $T$ ) or externallyassessed practical $(\mathrm{X})$, although the weightings are generally closer to the intended weights when unit 3 is externally assessed. At A2, there is a tendency for the unit 6 coursework ( $T$ ) to be slightly underweighted but not the externally-assessed practical ( X ). Consequently, the weighting of the A2 unit 6 , and the overall weighting of AO 3 , depend to some extent on the mode of assessment of unit 6.

Citizenship Studies (pages 106, 124) - Citizenship comprises four written papers. Both AS units achieved approximately $5 \%$ less than their intended weights. Unit 3 achieved over $8 \%$ more than its intended weight whilst unit 4 achieved a little over $1 \%$ more than intended. AO1 and, to a greater extent, AO3 are concentrated in the AS units and are thus underweighted compared with AO2, which is concentrated in the A2 units, and AO4, which is assessed exclusively at A2.

Communication \& Culture (pages 106, 125) - The assessment consists of a written paper and a coursework unit at both AS and A2. Both AS units are underweighted so the weighting of the AS:A2 is nearer to 40:60 than the intended 50:50. AOs 2 and 4 are reasonably evenly divided between the AS and A2 units, so the imbalance between the weighting of the AS and A2 units has a largely selfcorrecting effect in terms of the weighting of assessment objectives at A-level. The same is not true of AO1, which is concentrated most heavily in the AS units, or AO3, which is concentrated mainly in the A2 units. Consequently, AO1 is somewhat underweighted at subject level, whilst AO3 is somewhat overweighted.

Drama \& Theatre Studies (pages 108, 125) - The assessment consists of two written papers - one at AS and one at A2, each worth $30 \%$ of the A-level - and two practical coursework units - again, one at AS and one at A2, but each worth $20 \%$ of the A-level. The notable differences between the intended and achieved weights of the units is that the AS practical coursework (unit 2) is
underweighted by approximately $5 \%$ and the A2 written paper (unit 3) is overweighted by approximately $8 \%$. Consequently, AO1, which is assessed exclusively by the practical coursework units, is underweighted by approximately $5 \%$, whilst AO3, which is concentrated heavily in the A2 written paper (unit 3 ) is overweighted by more than $4 \%$.

History (pages 111, 126) - Units 1-3 are written papers and unit 4 is coursework. There are many optional units available in History, combining to make thousands of possible routes to certification; the most popular combination boasts only 514 candidates. Despite these many routes, there is a tendency amongst the most popular ones, included in this analysis, for unit 3 to be overweighted at the expense of the AS units, particularly unit 2. Consequently, AO3 - assessed mainly in unit 2 - is often underweighted, whilst AO4 - assessed predominantly in unit 3 - is often overweighted.

History of Art (pages 115, 127) - The assessment consists of four written papers. Both AS units achieve -5 to $-6 \%$ below their intended weights, whilst the A2 units, 3 and 4 , are overweighted by approximately $3 \%$ and $8 \%$, respectively. The distribution of assessment objectives across units is fairly uniform with the exception of AO4, which is assessed only at A2. Consequently, the only remarkable impact of the imbalance of units is the overweigthing by $2.6 \%$ of AO 4 in the overall A -level assessment.

Media Studies (pages 116, 127) - See separate commentary below.
Music (pages 116, 127) - Music comprises six units. The AS units are (1) a written paper, (2) an externally assessed coursework, and (3) an internally assessed coursework (performance). The A2 units are (1) a written paper, (2) an externally assessed coursework, and (3) an externally assessed coursework (performance). Units 2 and 5 have three optional units each, so there are numerous routes to certification. In the routes analysed here, the AS units tend to be underweighted, in particular the AS performance unit (3). This is unsurprising, as it is likely that most people who opt to study music at A-level will be reasonably accomplished performers and therefore achieve high grades on the AS practical unit. At A2, there is a tendency for the written paper, unit 4, to be considerably overweighted, with the coursework units achieving closer to their intended weights. The result of this is that AO1, which is assessed only on the performance units ( $3 \& 6$ ), is underweighted, whilst AO3, which is assessed only on the written papers, is overweighted.

PE (pages 117, 128) - The assessment consists of a written paper and a (largely performancebased) coursework unit at both AS and A2. The assessment objectives covered by the written papers (units $1 \& 3$ ) are almost mutually exclusive to those covered by the coursework units (units $2 \& 4$ ): AO1 is assessed on units 1 and 3 only; AO2 is assessed on units 2 and 4 only; and AO3 is largely assessed on units 1 and 3 , but also on unit 4 . Both written papers are overweighted - by around $4 \%$ at AS and 7\% at A2 - but it is the performance of the coursework that is of greatest concern. Although unit 4 is very close to its intended weight, unit 2 has achieved less than half its intended weight of $20 \%$. The exclusivity of AO2 to the coursework units means that this underweighting of unit 2 leads to the underweighting of AO 2 by $-11.1 \%$ at A -level and the overweighting of AO and AO 3 by $+7.5 \%$ and $+3.6 \%$. PE is another example of a subject where those people opting to take it are likely to do so because of their enthusiasm and aptitude for the practical unit, so it is unsurprising when the AS practical unit does not seem to discriminate effectively. This often means, rather perversely, that the aspect of a subject which attracts candidates to a course, and which they mostly do very well at, contributes much less to their final A-level grades than is intended.

## General Commentary on Analyses

The following analysis, rather than serving as a diagnostic tool for particular senior examining teams, is intended to be a more general piece of research evidence that can easily be extracted from the
dataset created for the study. It considers whether there is a tendency for coursework and controlled assessment units to be under-weighted more commonly than written papers.

## GCSE

(Table 37, Appendix 1, page 79; Table 38, Appendix 2, page 95)
The most popular routes through each specification were selected, including short courses, and the units classified as written examinations or 'other' (including coursework, practical, and oral examinations). Where specifications are tiered, the most popular pure foundation tier and pure higher tier routes were included. Obviously, controlled assessment units that are common to two or more specifications, e.g. the foundation and higher tier routes and/or a short and a long course, are necessarily double counted, but candidates are not double counted.

The mean of the differences between the achieved weights and the intended weights of units is negative for the written papers - mean $=-0.84(S E=0.45), N=143-$ and positive for the 'other' units - mean $=0.91(S E=0.43), \mathrm{N}=132$. The difference between these differences is statistically significant $-\mathrm{t}(273)=2.81, \mathrm{p}=.005$ (equal variances assumed) - but the size of the average difference is small and unlikely to be of any systematic practical consequence.

## A-Level

(Table 39, Appendix 3, page 103; Table 40, Appendix 4, page 124)
The most popular route for each specification was selected and the units classified as written examinations or 'other' (including coursework, practical, oral examinations, etc.). Given the tendency for AS units to achieve below their intended weights compared with the A2 units, when they form part of an A-level, the analysis included AS/A2 as a factor. Figure 1 shows the mean difference between the achieved weights and the intended weights of the units broken down by level (AS/A2) and type (written paper/other). The tendency for the underweighting of the AS units and the overweighting of the A2 units is clear $[F(1,210)=261.97, p<.001]$. It also appears that the written paper units achieve relatively more weight than other units $[F(1,210)=24.04$, $\mathrm{p}<.001]$ but that this depends on whether or not they are AS or A2 units $[F(1,210)=15.23, p<.001]$, with there being no reliable difference between written and other papers at $A S[t(105)=0.70, p>.05]$ yet a reliable difference of approximately 4 percentage points at $\mathrm{A} 2[\mathrm{t}(105)=6.27, \mathrm{p}<.001]$.

Figure 1. The mean differences between the achieved weights and the intended weights of AS and A2 written paper and 'other' units.

The difference between GCSE and A-level might be explained by the fact that controlled assessment - prevalent at GCSE - is more exam-like than coursework - still the most common form of centre assessed work at A-level - and that the timed element in controlled assessment produces greater discrimination than is achieved in coursework. The other main differences between controlled assessment and coursework are that the current GCSEs - and, therefore, the controlled assessment units - are newer than the current A-levels - and their coursework units - but, perhaps more importantly, that the controlled assessment tasks change regularly, whereas coursework tasks tend not to. This familiarity with the coursework tasks could make it relatively easier for candidates to fulfil the criteria for coursework than for controlled assessment.

Broadly speaking, the evidence suggests that there are not important generic differences between internally and externally assessed units in terms of their achieved weightings, although the difference at A2 may warrant attention in relation to future specification development. Within particular specifications - again, particularly A-levels with coursework at A2 - may be another matter and it is the examination of outliers that will be more informative from a quality control perspective.

## Analyses Part 2: Question-Unit Weightings

## A-level Media Studies

## Assessment Objectives

The assessment objectives for A-level Media Studies are as follows:
AO1 Demonstrate knowledge and understanding of media concepts, contexts and critical debates.
AO2 Apply knowledge and understanding when analysing media products and processes and evaluating their own practical work, to show how meanings and responses are created.

AO3 Demonstrate the ability to plan and construct media products using appropriate technical and creative skills.

AO4 Demonstrate the ability to undertake, apply and present appropriate research.

## A-level Certificating Candidates

Table 1 shows the achieved weightings of units and their corresponding assessment objectives for candidates certificating A-level Media Studies in summer 2011.

Table 1. The achieved weightings of units and their corresponding assessment objectives for candidates certificating A-level Media Studies in summer 2011 ( $\mathrm{N}=6,986$ ).

| Unit | Intended <br> Weight | Achieved <br> Weight | AO1 | AO2 | AO3 | AO4 | Ach <br> AO1 | Ach <br> AO2 | Ach <br> AO3 | Ach <br> AO4 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| MEST1 <br> AS Written | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 1 . 7 2}$ | 15.00 | 10.00 | 0.00 | 0.00 | 13.03 | 8.69 | 0.00 | 0.00 |

| Difference |  |  |  |  |  |  | $\mathbf{- 1 . 2 7}$ | $\mathbf{- 1 . 6 8}$ | $\mathbf{1 . 3 5}$ | $\mathbf{1 . 6 0}$ |

The achieved weights for the units show that MEST4, the A2 portfolio unit, has exceeded its intended weighting by $4.32 \%$, whilst MEST1, the AS written paper unit, has fallen $3.28 \%$ short of its intended weight. MEST2 (AS portfolio) and MEST3 (A2 written paper) have near-enough achieved their intended weightings. The assessment objectives AO3 and AO4 are practical in nature and are measured only by the portfolio units, whilst AO1 and AO2 constitute only $5 \%$ of the marks for MEST4 and MEST2, respectively. Consequently, the underweighting of a written unit and the overweighting of a portfolio unit means that AO3 and AO4 over-contribute and AO1 and AO2 under-contribute to the Alevel outcomes.

This analysis assumes that, within each unit, the assessment objectives have achieved their intended weights. It is possible that, within a unit, a given assessment objective is over- or underweighted. This could potentially offset or exacerbate the effects of an imbalance in the weighting of units. An item level analysis is required to confirm or refute this. It should be noted that the majority of certificating candidates will not have taken all of their units in the certificating series. To sample such candidates would introduce two fundamental problems: first, they are few in number; second, they are
unrepresentative of how candidates enter for units. It would be unwise to draw conclusions from their data; rather, it would be better to monitor the weightings over several series. If there are stable, undesirable patterns in the data, structural changes to units or improvements to the setting and/or marking of questions may be desirable.

## MEST1 - Investigating Media

The aim of this unit is to enable candidates to investigate the media by applying media concepts to a range of media products in order to reach an understanding of how meanings and responses are created. Candidates should be encouraged to investigate the contemporary media landscape and the changing contexts within which media texts are produced and consumed.

Candidates will investigate the processes of meaning-making in media production and reception:

- at the micro level within individual products (also termed texts)
- and at a macro level in terms of technologies (also termed platforms).

In this specification the media platforms are referred to as broadcasting, e-media and print, to include linear broadcasting (audio-visual) and cinema, print media, digital/web-based and emerging media.

Candidates will firstly investigate a wide range of media texts to familiarise themselves with media language and media codes and conventions and then embark upon a cross-media study.

The investigations into media concepts, processes and products will link with and inform the research into Unit 2: Creating Media, where candidates are required to produce media artefacts taken from two of the three media platforms.

On MEST1, candidates must answer the four questions in section A and one of the two questions in section B. Table 2 shows the analysis for those candidates who opted for (or, where they did both optional questions, scored highest on) question B5. AO1 is associated with the section A questions, which constitute $48 / 80(60 \%)$ marks on the paper. The remaining $32 / 80(40 \%)$ marks in section $B$ are associated with AO2. The analysis shows that the achieved weightings of $51.40 \%$ for AO1 and $48.60 \%$ for AO 2 are closer to a 50/50 split than the intended 60/40.

Table 3 shows the analysis for those candidates who opted for (or, where they did both optional questions, scored highest on) question B6. Again, the achieved weightings of $47.82 \%$ for AO 1 and $52.18 \%$ for AO 2 are closer to a $50 / 50$ split than the intended $60 / 40$ and, in this case, AO 2 has slightly outweighed AO1.

## MEST3 - Critical Perspectives

The aim of this synoptic unit is to allow candidates to demonstrate their holistic understanding of the Media Studies Specification. It is assumed that during the course of their study they will have covered media concepts in some detail but, generally speaking, individually. At this level they are encouraged to examine the media in a less formulaic way. MEST3 will encourage candidates to demonstrate their understanding of the concepts, and also to develop and formulate their approach to the media and the role of the media in today's society by referring in detail to the wider contexts (social, political, historical, economic, as appropriate) which affect media production, distribution and exhibition, by tackling media theory and by taking part in a discussion of the major contemporary media issues and debates. Candidates are expected to look at cross-cultural factors and the effects of globalisation on the media where appropriate.

On MEST3, candidates must answer the three questions in section A and one of the four questions in section B. Table 4 shows the analysis for those candidates who opted for (or, where they did more
than one optional question, scored highest on) question B4. AO1 is associated with the section A questions, which constitute $32 / 80(40 \%)$ marks on the paper. The remaining 48/80 (60\%) marks in section B are associated with AO2. The analysis shows that the achieved weightings of $30.61 \%$ for AO1 and $69.39 \%$ for AO2 are closer to a $30 / 70$ split than the intended $40 / 60$.

Table 5 shows the analysis for those candidates who opted for (or, where they did more than one optional question, scored highest on) question B5. Again, the achieved weightings of $29.73 \%$ for AO1 and $70.27 \%$ for AO2 are closer to a 30/70 split than the intended 40/60.

Table 6 shows the analysis for those candidates who opted for (or, where they did more than one optional question, scored highest on) question B6. Again, the achieved weightings of $31.70 \%$ for AO1 and $68.30 \%$ for AO 2 are closer to a $30 / 70$ split than the intended $40 / 60$.

Table 7 shows the analysis for those candidates who opted for (or, where they did more than one optional question, scored highest on) question B7. Again, the achieved weightings of $31.72 \%$ for AO1 and $68.28 \%$ for AO 2 are closer to a $30 / 70$ split than the intended $40 / 60$.

There are two things to note from these findings. First, at unit level (Table 1), the portfolio units have defied the trend for A-level coursework/practical units to achieve less than their intended weights. Second, at the question level in the written units (Tables 2-7), the longer questions - associated exclusively with AO2 - have achieved over their intended weights, whilst the shorter questions associated exclusively with AO1 - have achieved under their intended weights.

The association of particular assessment objectives with certain question types means that the misweighting of assessment objectives could be addressed either through improving the discrimination provided by the shorter questions or by assigning both assessment objectives more equally to the short-answer and extended-response question types. For example, it may be useful to consider the assessment of AO1 using some longer questions and/or AO2 using some shorter questions, so that they achieve their intended weights. Clearly though, the achieved weightings of the assessment objectives are one of many possible sources of validity evidence. A better achieved weighting of assessment objectives should not be pursued at the expense of other validity concerns, such as whether a shorter or longer version of a question is still measuring appropriately the associated assessment objective.

## GCSE History B (Full Course)

## Assessment Objectives

AO1 Recall, select and communicate their knowledge and understanding of history.
AO2 Demonstrate their understanding of the past through explanation and analysis of:

- key concepts: causation, consequence, continuity, change and significance within an historical context;
- key features and characteristics of the periods studied and the relationship between them.

AO3 Understand, analyse and evaluate:

- a range of source material as part of an historical enquiry;
- how aspects of the past have been interpreted and represented in different ways as part of an historical enquiry

## Certificating Candidates

Table 8 shows the achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE History B (Full Course) in summer 2011.

Table 8. The achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE History B (Full Course) in summer 2011 ( $\mathrm{N}=35,720$ ).

| Unit | Intended <br> Weight | Achieved <br> Weight | AO1 | AO2 | AO3 | Ach <br> AO1 | Ach <br> AO2 | Ach <br> AO3 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 40451 <br> Written Paper | $\mathbf{3 7 . 5 0}$ | $\mathbf{3 7 . 8 7}$ | 15.00 | 15.00 | 7.50 | 15.15 | 15.15 | 7.57 |
| 40452 <br> Written Paper | $\mathbf{3 7 . 5 0}$ | $\mathbf{4 1 . 3 6}$ | 15.00 | 15.00 | 7.50 | 16.54 | 16.54 | 8.27 |
| 40453 <br> Controlled <br> Assessment | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 0 . 7 7}$ | 2.50 | 2.50 | 20.00 | 2.08 | 2.08 | 16.62 |
| Total |  |  | $\mathbf{3 2 . 5 0}$ | $\mathbf{3 2 . 5 0}$ | $\mathbf{3 5 . 0 0}$ | $\mathbf{3 3 . 7 7}$ | $\mathbf{3 3 . 7 7}$ | $\mathbf{3 2 . 4 6}$ |
| Difference |  |  |  |  |  | $\mathbf{1 . 2 7}$ | $\mathbf{1 . 2 7}$ | $\mathbf{- 2 . 5 4}$ |

The achieved weights for the units show that the written paper, 40451, has achieved a weighting very close to that intended (+0.37\%), whilst the other written paper, 40452, has exceeded its intended weight by $3.86 \%$. The controlled assessment unit, 40453, has fallen short of its intended weight by $4.23 \%$. Although all of the three assessment objectives are measured across the three units, AO1 and AO2 are assessed predominantly in the written papers, whilst AO3 is assessed predominantly in the controlled assessment unit. Consequently, AO3 is underweighted when compared with AO1 and AO2.

This analysis assumes that, within each unit, the assessment objectives have achieved their intended weights. It is possible that, within a unit, a given assessment objective is over- or underweighted. This could potentially offset or exacerbate the effects of an imbalance in the weighting of units. An item level analysis is required to confirm or refute this. It should be noted that the majority of certificating candidates will not have taken all of their units in the certificating series. To sample such candidates would introduce two fundamental problems: first, they are few in number; second, they are unrepresentative of how candidates enter for units. It would be unwise to draw conclusions from their data; rather, it would be better to monitor the weightings over several series. If there are stable,
undesirable patterns in the data, structural changes to units or improvements to the setting and/or marking of questions may be desirable.

## 40451 - International Relations: Conflict and Peace in the 20th Century

This unit provides an outline study of history. The content is on international relations and covers many of the main events of the 20th Century.

On 40451, candidates must answer three questions on three of six optional topics. Table 9 shows the analysis for those candidates who opted for (or, where they attempted more than three questions, scored highest on) questions 1, 2, and 3 (the most popular combination).
$\mathrm{AO} 1, \mathrm{AO} 2$, and AO 3 achieve respective weightings of $48.81 \%, 41.96 \%$, and $9.23 \%$, compared with their intended weightings of 40:40:20. However, the achieved weightings are not purely the product of the performance of the question paper. Clearly, this question paper has been written with greater emphasis on AO1 and AO2 and less emphasis on AO3 than stated in the specification: the effective intended weightings are 45:45:10 (Table 9). Considering that AO3 appeared underweighted when it was assumed that it had achieved its intended weight within each unit, the finding that AO3 is significantly underweighted within 40451 must be a concern.

Table 10 shows the analysis for those candidates who opted for (or, where they attempted more than three questions, scored highest on) questions 4,5 , and 6 (the third most popular combination). AO1, AO 2 , and AO 3 achieve respective weightings of $45.87 \%, 44.24 \%$, and $9.89 \%$. These weightings are very close to the effective intended weightings of 45:45:10 - so the question paper has performed well - but obviously are not in line with the published intended weightings of 40:40:20.

Table 9. The achieved weightings of questions and their corresponding assessment objectives for $40451(1,2,3)$ in summer 2011 ( $\mathrm{N}=12,876$ ).

## 40452 - Twentieth Century Depth Studies

This unit requires the study of contrasting or complementary governments throughout the Twentieth Century. It gives a national or regional focus to studies in depth, based on events, developments and issues in specified countries or regions.

On 40452, candidates must answer three questions: one of three questions from Section $A$ and two of seven questions from Section B. Table 11 shows the analysis for those candidates who opted for (or, where they attempted more than three questions, scored highest on) questions A3, B5, and B6 (the most popular combination, with four times as many candidates as the next most popular route).

Table 11. The achieved weightings of questions and their corresponding assessment objectives for $40452(3,5,6)$ in summer 2011 ( $\mathrm{N}=10,005$ ).

| 40452 (3,5,6) | TOTAL | A 3.7 | A 3.8 | A 3.9 | B 5.12 | B 5.13 | B 6.14 | B 6.15 |  |

| R item:total |  | 0.37 | 0.70 | 0.76 | 0.81 | 0.86 | 0.84 | 0.87 |  |
| Ach Weight |  | 2.83 | 9.59 | 14.88 | 13.36 | 21.28 | 17.03 | 21.03 |  |
| Int Weight |  | 6.67 | 10.00 | 16.67 | 13.33 | 20.00 | 13.33 | 20.00 |  |
| Max | 60.00 | 4.00 | 6.00 | 10.00 | 8.00 | 12.00 | 8.00 | 12.00 |  |
|  |  |  |  |  |  |  |  |  | Total |
| AO1 \% of marks |  | 0.00 | 33.33 | 20.00 | 62.50 | 50.00 | 62.50 | 50.00 | $\mathbf{4 3 . 3 3}$ |
| AO2 \% of marks |  | 0.00 | 66.67 | 20.00 | 12.50 | 50.00 | 12.50 | 50.00 | $\mathbf{3 3 . 3 3}$ |
| AO3 \% of marks |  | 100.00 | 0.00 | 60.00 | 25.00 | 0.00 | 25.00 | 0.00 | $\mathbf{2 3 . 3 3}$ |
|  |  |  |  |  |  |  |  |  |  |
| AO1 weight |  | 0.00 | 3.20 | 2.98 | 8.35 | 10.64 | 10.64 | 10.51 | $\mathbf{4 6 . 3 2}$ |
| AO2 weight |  | 0.00 | 6.39 | 2.98 | 1.67 | 10.64 | 2.13 | 10.51 | $\mathbf{3 4 . 3 2}$ |
| AO3 weight |  | 2.83 | 0.00 | 8.93 | 3.34 | 0.00 | 4.26 | 0.00 | $\mathbf{1 9 . 3 6}$ |

As with the previous unit, the effective weightings of the assessment objectives are not in line with those published in the specification. AO1, AO2, and AO3 have respective effective intended weightings of $43.33 \%, 33.33 \%$, and $23.33 \%$ compared with published intended weightings of 40:40:20. AO1 and AO2 have achieved slightly above their effective intended weights, whilst AO3 has achieved slightly under its intended weight. Both questions in section A that assess AO3 are underweighted, including the four mark question, which assesses purely AO3.

## Reassessing Certificating Candidates

Table 12 shows the achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE History B (Full Course) in summer 2011, adjusted to reflect the effective intended weightings on 40451 and 40452. Based on these effective intended AO weightings and achieved unit weights, the overall assessment overweights AO1 by approximately $5 \%$ and underweights AO3 by approximately the same. When we consider the question level analysis and the fact that, at that level too, AO1 tends to be overweighted and AO3 underweighted, these 5\% estimates are probably somewhat conservative.

Table 12. The achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE History B (Full Course) in summer 2011 ( $\mathrm{N}=35,720$ ) - adjusted to reflect the effective intended weightings on 40451 and 40452.

| Unit | Intended <br> Weight | Achieved <br> Weight | AO1 | AO2 | AO3 | Ach <br> AO1 | Ach <br> AO2 | Ach <br> AO3 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 40451 | $\mathbf{3 7 . 5 0}$ | $\mathbf{3 7 . 8 7}$ | 16.88 | 16.88 | 3.75 | 17.04 | 17.04 | 3.79 |
| 40452 | $\mathbf{3 7 . 5 0}$ | $\mathbf{4 1 . 3 6}$ | 16.25 | 12.50 | 8.75 | 17.92 | 13.78 | 9.65 |
| 40453 | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 0 . 7 7}$ | 2.50 | 2.50 | 20.00 | 2.08 | 2.08 | 16.62 |
| Total |  |  | $\mathbf{3 5 . 6 2}$ | $\mathbf{3 1 . 8 7}$ | $\mathbf{3 2 . 5 0}$ | $\mathbf{3 7 . 0 4}$ | $\mathbf{3 2 . 9 0}$ | $\mathbf{3 0 . 0 5}$ |
| Difference <br> Achieved - <br> Effective |  |  |  |  |  | $\mathbf{1 . 4 2}$ | $\mathbf{1 . 0 3}$ | $\mathbf{- 2 . 4 5}$ |
| Difference <br> Achieved - <br> Published |  |  |  |  |  | $\mathbf{4 . 5 4}$ | $\mathbf{0 . 4 0}$ | $\mathbf{- 4 . 9 5}$ |

In the case of the A-level Media Studies papers, the longer extended response questions all exceeded their intended weights while the shorter-response questions tended to be underweighted. In the case of the current papers no such pattern is obvious: some of the questions with the lowest tariff - four marks - exceed their intended weightings while others fail to reach them.

Although the achieved weightings could be monitored over time, the most pertinent issue is the translation of intended weightings, as published in the specification, into effective intended weightings in the question papers. Reassuringly, the effective intended weightings, at specification level (Table 12), fall within, or adjacent to, the ranges permitted in the Ofqual criteria for GCSE History - AO1 (25 $-35 \%)$, AO2 $(25-35 \%)$, AO3 ( $30-40 \%$ ) - and the issue of rebalancing them was being addressed at the time of writing.

## GCSE Business Studies

## Assessment Objectives

The assessment units will assess the following assessment objectives:
AO1 Recall, select and communicate their knowledge and understanding of concepts, issues and terminology.

AO2 Apply skills, knowledge and understanding in a variety of contexts and in planning and carrying out investigations and tasks.

AO3 Analyse and evaluate evidence, make reasoned judgements and present appropriate conclusions.

## Quality of Written Communication (QWC)

GCSE specifications which require candidates to produce written material in English must:

- ensure that text is legible and that spelling, punctuation and grammar are accurate so that meaning is clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

In this specification QWC will be assessed in all units as part of AO3 (indicated in the tables as question $1 / 2 / 3 \mathrm{dE}$ ).

## Certificating Candidates

Table 13 shows the achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE Business Studies in summer 2011.

Table 13. The achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE Business Studies in summer 2011 ( $\mathrm{N}=20,754$ ).

| Unit | Intended <br> Weight | Achieved <br> Weight | AO1 | AO2 | AO3 | Ach <br> AO1 | Ach <br> AO2 | Ach <br> AO3 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 413001 <br> Written Paper | $\mathbf{4 0 . 0 0}$ | $\mathbf{3 7 . 4 7}$ | 12.00 | 14.00 | 14.00 | 11.24 | 13.12 | 13.12 |
| 413002 <br> Written Paper | $\mathbf{3 5 . 0 0}$ | $\mathbf{3 8 . 0 2}$ | 10.50 | 12.25 | 12.25 | 11.41 | 13.31 | 13.31 |
| 413003 <br> Controlled <br> Assessment | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 4 . 5 0}$ | 7.50 | 8.75 | 8.75 | 7.35 | 8.58 | 8.58 |
| Total |  |  | $\mathbf{3 0 . 0 0}$ | $\mathbf{3 5 . 0 0}$ | $\mathbf{3 5 . 0 0}$ | $\mathbf{3 0 . 0 0}$ | $\mathbf{3 5 . 0 0}$ | $\mathbf{3 5 . 0 0}$ |
| Difference |  |  |  |  |  | $\mathbf{0 . 0 0}$ | $\mathbf{0 . 0 0}$ | $\mathbf{0 . 0 0}$ |

Overall, the achieved weights of the units are in line with their intended weights. Owing to the fact that the assessment objectives within each unit are weighted quite similarly, deviation from the intended weightings at unit level cannot dramatically upset the balance of assessment objective weightings at subject level.

This analysis assumes that, within each unit, the assessment objectives have achieved their intended weights. It is possible that, within a unit, a given assessment objective is over- or underweighted. This could potentially offset or exacerbate the effects of an imbalance in the weighting of units. An item level analysis is required to confirm or refute this. It should be noted that the majority of certificating candidates will not have taken all of their units in the certificating series. To sample such candidates would introduce two fundamental problems: first, they are few in number; second, they are unrepresentative of how candidates enter for units. It would be unwise to draw conclusions from their data; rather, it would be better to monitor the weightings over several series. If there are stable, undesirable patterns in the data, structural changes to units or improvements to the setting and/or marking of questions may be desirable.

## 413001 - Setting up a Business

This unit introduces candidates to issues concerning the setting up and operation of a business. It explores the activities of business and the reasons for success or failure. It encourages candidates to appreciate that businesses must operate within society and that this involves businesses engaging with a wide range of stakeholders who will hold differing perspectives.

Table 14 shows the intended and achieved weights for the questions and their corresponding assessment objectives for 413001. Candidates must answer all questions on this paper. AO1, AO2, and AO3 achieve respective weightings of $36.00 \%, 38.16 \%$, and $25.84 \%$, compared with their intended weightings of $30: 35: 35$. Closer examination of Table 14 shows that the mean marks awarded for QWC (questions $1 / 2 / 3 \mathrm{dE}$ ), which is assessed as a part of AO3, are low and that the achieved weightings for these part-questions are in the range of $1 / 2$ to $2 / 3$ of those intended. By contrast, the achieved weightings for those part-questions ( $1 / 2 / 3 \mathrm{~d}$ ) based on the marks awarded for AO1, AO2, and non-QWC AO3 are much closer to, or exceed, the intended weightings. So, whilst AO3 on the whole is quite seriously underweighted, it appears that it is the QWC component, more than the analytical and evaluative skills component, which is problematic. The marks allocated to QWC are not discriminating between candidates. It may be that the candidature is genuinely homogenous and that the measure would work appropriately on a more heterogeneous candidature. This could be regarded as a success, as it might indicate that the inclusion of QWC in the assessment has made the majority of candidates take care over the quality of their writing without the assessment actually discriminating between them on the basis of it. Alternatively, it could be that the mark scheme is not enabling markers to award a large enough range of marks to facilitate discrimination between candidates, or that QWC is genuinely too weakly correlated with performance on the subject content to ever achieve its intended weight, no matter how examiners intervene.

## 413002 - Growing as a Business

This unit builds upon the content of Unit 1, allowing candidates to study businesses as they grow and the issues that expansion raises.

Table 15 shows the intended and achieved weights for the questions and their corresponding assessment objectives for 413002. Candidates must answer all questions on this paper. AO1, AO2, and AO3 achieve respective weightings of $33.36 \%, 34.91 \%$, and $31.73 \%$, compared with their intended weightings of $30: 35: 35$. Although AO3 is still underweighted, the problem is not nearly as large as for unit 413001. If the achieved weightings for the QWC part-questions work on this paper, and the candidates are predominantly the same candidates who took unit 413001, it seems reasonable to suggest that the mark scheme for the first unit might be the issue rather than the candidature.

Table 14. The achieved weightings of questions and their corresponding assessment objectives for 413001 in summer 2011 ( $N=21,467$ ).

## A-level French

## Assessment Objectives

The assessment objectives for A-level French are as follows:
AO1 Understand and respond, in speech and writing, to spoken language.
AO2 Understand and respond, in speech and writing, to written language.
AO3 Show knowledge of and apply accurately the grammar and syntax prescribed in the specification.

## Quality of Written Communication (QWC)

In GCE specifications which require candidates to produce written material in English, candidates must:

- ensure that text is legible and that spelling, punctuation and grammar are accurate so that meaning is clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

In this specification QWC will be assessed in Units 1 and 3 by means of the transfer of meaning tasks.

## A-level Certificating Candidates

Table 16 shows the achieved weightings of units and their corresponding assessment objectives for candidates certificating A-level French in summer 2011.

Table 16. The achieved weightings of units and their corresponding assessment objectives for candidates certificating A-level French in summer 2011 ( $\mathrm{N}=3,627$ ).

| Unit | Intended <br> Weight | Achieved <br> Weight | AO1 | AO2 | AO3 | Ach AO1 | Ach AO2 | Ach AO3 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| FREN1 <br> AS Written Paper | 35.00 | 36.75 | 11.00 | 16.00 | 8.00 | 11.55 | 16.80 | 8.40 |
| FRE2T <br> AS Speaking Test | 15.00 | 9.49 | 7.00 | 3.00 | 5.00 | 4.43 | 1.90 | 3.16 |
| FREN3 <br> A2 Written Paper | 35.00 | 39.11 | 8.00 | 19.00 | 8.00 | 8.94 | 21.23 | 8.94 |
| FRE4T <br> A2 Speaking Test | 15.00 | 14.66 | 7.00 | 4.00 | 4.00 | 6.84 | 3.91 | 3.91 |
| Total |  |  | $\mathbf{3 3 . 0 0}$ | $\mathbf{4 2 . 0 0}$ | $\mathbf{2 5 . 0 0}$ | $\mathbf{3 1 . 7 6}$ | $\mathbf{4 3 . 8 4}$ | $\mathbf{2 4 . 4 1}$ |
| Difference |  |  |  |  |  | $\mathbf{- 1 . 2 4}$ | $\mathbf{1 . 8 4}$ | $\mathbf{- 0 . 5 9}$ |

The AS written paper, FREN1, has achieved a weighting broadly inline with that intended (+1.75\%), whilst its A2 counterpart, FREN3, has an achieved weight $+4.11 \%$ over that intended. The AS speaking test, FRE2T, has achieved a weighting $-5.51 \%$ below that intended, whilst the A2 speaking test, FRE4T, achieved a weight close to that intended ( $-0.34 \%$ ). The overall effect is that the A2 assessment is slightly overweighted compared with the AS - this is to be expected when the less challenging AS units are considered in the context of certificating A-level candidates - and that AO2,
response to written language, is slightly overweighted compared with AO1 and, to a lesser extent, AO3.

This analysis assumes that, within each unit, the assessment objectives have achieved their intended weights. It is possible that, within a unit, a given assessment objective is over- or underweighted. This could potentially offset or exacerbate the effects of an imbalance in the weighting of units. An item level analysis is required to confirm or refute this. It should be noted that the majority of certificating candidates will not have taken all of their units in the certificating series. To sample such candidates would introduce two fundamental problems: first, they are few in number; second, they are unrepresentative of how candidates enter for units. It would be unwise to draw conclusions from their data; rather, it would be better to monitor the weightings over several series. If there are stable, undesirable patterns in the data, structural changes to units or improvements to the setting and/or marking of questions may be desirable.

## FREN1 - Listening, Reading and Writing

Table 17 shows the intended and achieved weights for the questions and their corresponding assessment objectives for FREN1. Candidates must answer all questions on this paper. The results show that AO1 - understanding and responding to spoken language - is somewhat underweighted ($4.49 \%$ ), whilst AO3 - knowledge and application of grammar and syntax - is overweighted ( $+4.71 \%$ ). AO2 - understanding and responding to written language - achieved a weighting broadly in line with that intended (-0.22\%).

## FREN3 - Listening, Reading and Writing

On FREN3, candidates must answer all of the questions in section A and one of the five questions in section B. The analyses presented are for the two most popular routes. Table 18 shows the analysis for those candidates who opted for (or, where they did multiple optional questions, scored highest on) question B12. As with the AS unit, FREN1, AO1 on FREN3 is underweighted, except that, in this case, it is more dramatic at $-9.05 \%$. Both AO 2 and AO 3 achieved weights greater than intended, at $+3.04 \%$ and $+6.01 \%$, respectively. Clearly, the questions that require candidates to respond to spoken language do not discriminate between them as well as those requiring responses to written language or those requiring syntactically and grammatically accurate production of written language. There is a considerable number of these questions with extremely high facility indices (mean/max) many greater than 0.95 - which are simply too easy.

Table 19 shows the analysis for those candidates who opted for (or, where they did multiple optional questions, scored highest on) question B14. The achieved weightings of the assessment objectives are very similar to those for candidates who opted for question B12, so there is no issue in terms of the comparability of the weightings of assessment objectives.

Table 17. The achieved weightings of questions and their corresponding assessment objectives for FREN1 in summer 2011 ( $N=11,103$ ).

## A-level Maths

## Assessment Objectives

The schemes of assessment will assess candidates' ability to:
AO1 Recall, select and use their knowledge of mathematical facts, concepts and techniques in a variety of contexts.

AO2 Construct rigorous mathematical arguments and proofs through use of precise statements, logical deduction and inference and by the manipulation of mathematical expressions, including the construction of extended arguments for handling substantial problems presented in unstructured form.

AO3 Recall, select and use their knowledge of standard mathematical models to represent situations in the real world; recognise and understand given representations involving standard models; present and interpret results from such models in terms of the original situation, including discussion of the assumptions made and refinement of such models.

AO4 Comprehend translations of common realistic contexts into mathematics; use the results of calculations to make predictions, or comment on the context; and, where appropriate, read critically and comprehend longer mathematical arguments or examples of applications.

AO5 Use contemporary calculator technology and other permitted resources (such as formulae booklets or statistical tables) accurately and efficiently; understand when not to use such technology, and its limitations; give answers to appropriate accuracy.

## A-level Certificating Candidates

Table 20 shows the achieved weightings of units and their corresponding assessment objectives for candidates certificating A-level Maths in summer 2011. There are many optional units and therefore many routes to certification in A-level Maths. The route illustrated is that with the highest entry. Note that certain A-level routes permit the combination of four AS units and two A2 units, as is the case here. The units MPC1-4 assess pure core maths, MS1B statistics, and MM1B mechanics.

Table 20. The achieved weightings of units and their corresponding assessment objectives for candidates certificating A-level Maths in summer 2011 ( $\mathrm{N}=\mathbf{4 , 1 6 2 ) .}$

| Unit | Intended <br> Weight | Achieved <br> Weight | AO1 | AO2 | AO3 | AO4 | AO5 | Ach <br> AO1 | Ach <br> AO2 | Ach <br> AO3 | Ach <br> AO4 | Ach <br> AO5 |

| Total |  |  | $\mathbf{3 5 . 8 0}$ | $\mathbf{3 5 . 8 0}$ | $\mathbf{1 1 . 0 5}$ | $\mathbf{8 . 9 1}$ | $\mathbf{8 . 4 5}$ | $\mathbf{3 6 . 4 3}$ | $\mathbf{3 6 . 4 3}$ | $\mathbf{9 . 3 4}$ | $\mathbf{8 . 9 5}$ | $\mathbf{8 . 8 6}$ |
| Difference |  |  |  |  |  |  |  | $\mathbf{0 . 6 3}$ | $\mathbf{0 . 6 3}$ | $\mathbf{- 1 . 7 1}$ | $\mathbf{0 . 0 4}$ | $\mathbf{0 . 4 1}$ |

The differences between the intended and achieved weights for the two A2 units, MPC3 and MPC4, are striking at $+4.93 \%$ and $+9.62 \%$, respectively. Clearly, these units are having an unintentionally strong influence on the final results of A-level candidates, most likely because the less demanding AS units do not discriminate between candidates as well. The most noticeable consequence for the assessment objectives is that AO3, which is only assessed in the statistics and mechanics units, is underweighted.

This analysis assumes that, within each unit, the assessment objectives have achieved their intended weights. It is possible that, within a unit, a given assessment objective is over- or underweighted. This could potentially offset or exacerbate the effects of an imbalance in the weighting of units. An item level analysis is required to confirm or refute this. It should be noted that the majority of certificating candidates will not have taken all of their units in the certificating series. To sample such candidates would introduce two fundamental problems: first, they are few in number; second, they are unrepresentative of how candidates enter for units. It would be unwise to draw conclusions from their data; rather, it would be better to monitor the weightings over several series. If there are stable, undesirable patterns in the data, structural changes to units or improvements to the setting and/or marking of questions may be desirable.

For A-level Maths, the enhanced results analyses (ERA) provided to centres are broken down by subject content rather than assessment objectives. In the case of MPC1, for example, the partquestions are identified as assessing algebra, coordinate geometry, differentiation, and integration, rather than the more general assessment objectives. The item analyses presented here are based on subject content not assessment objectives but, otherwise, the method is the same.

## MPC1 - Pure Core 1

Table 21 shows the intended and achieved weights for the questions and the corresponding subject content for MPC1. Candidates must answer all questions on this paper. The results show that the achieved weightings are very close to those intended, with algebra questions being slightly underweighted and coordinate geometry being slightly overweighted.

## MPC2 - Pure Core 2

Table 22 shows the intended and achieved weights for the questions and the corresponding subject content for MPC2. Candidates must answer all questions on this paper. The questions on integration have achieved somewhat more than their intended weights (+3.12\%), but the impact on other subject content is spread across sequences and series, trigonometry, and exponentials and logarithms.

## MPC3 - Pure Core 3

Table 23 shows the intended and achieved weights for the questions and the corresponding subject content for MPC3. Candidates must answer all questions on this paper. It is notable that, as with MPC1 and MPC2, respectively, the total achieved weight of the algebra questions was less than intended and the total achieved weight of the integration questions was higher than intended.

## MPC4 - Pure Core 4

Table 24 shows the intended and achieved weights for the questions and the corresponding subject content for MPC4. Candidates must answer all questions on this paper. The questions on algebra and functions have achieved a weighting of $-5.54 \%$ - approximately $1 / 3$ - under their intended weighting of $16 \%$, trigonometry is overweighted by $+2.94 \%$ - almost 1.5 times its intended weight - and the questions on exponentials and logarithms have achieved approximately half of their total intended weight ( $-3.97 \%$ ). It is worth noting that trigonometry is assessed on one part-question only (4b);
therefore, the total achieved weighting for that subject content is dependent on whether that one question proves to be particularly good or poor at discriminating between candidates.

## MS1B - Statistics 1B

Table 25 shows the intended and achieved weights for the questions and the corresponding subject content for MS1B. Candidates must answer all questions on this paper. With the exception of numerical measures, the achieved weights for each area of subject content on this paper are considerably different to what was intended. The total weighting for correlation and regression questions is $-9.16 \%$ - greater than $1 / 3$ - below the intended total weighting.

## MM1B - Mechanics 1B

Table 26 shows the intended and achieved weights for the questions and the corresponding subject content for MM1B. Candidates must answer all questions on this paper. The differences between intended and achieved weightings for most areas of subject content are small in absolute terms, with the notable exceptions of kinematics in one and two dimensions ( $-6.19 \%$ ) and projectiles ( $+4.23 \%$ ). However, there are a number of small areas of subject content, with small intended weightings, where the achieved weightings, though not dramatically different in absolute terms, are rather more dramatic when expressed as proportions. For example, statics and forces are intended to constitute $2.67 \%$ of the total paper marks (2/75). Their achieved weighting of $1.60 \%$ is $-1.07 \%$ less than intended but this accounts for over $40 \%$ of the intended weight, effectively reducing the value of the questions to $1 / 75$. The overall weighting of a small area of content is likely to be especially volatile owing to its concentration in one or two low-tariff questions. Unless there is a consistent pattern of under- or overweighting over time, there is probably little to be done about it. When the specification is redeveloped, a higher maximum mark for the paper - and higher tariff items for the small areas of content - could be considered as a means to achieving a better, or less volatile, balance of achieved weightings.

Table 21. The achieved weightings of questions and their corresponding subject content areas for MPC1 in summer 2011 ( $\mathrm{N}=15,956$ ).

| MPC1 | TOTAL | $\mathbf{1 a}$ | $\mathbf{1 b i}$ | $\mathbf{1 b i i}$ | $\mathbf{1 c}$ | $\mathbf{2 a i}$ | $\mathbf{2 a i i}$ | $\mathbf{2 b}$ | $\mathbf{3 a}$ | 3bi | 3bii | 3ci | 3cii | 4a | 4bi | 4bii |

## GCSE Biology

## Assessment Objectives

A01 Knowledge and understanding of science and how science works
Candidates should be able to:
a) demonstrate knowledge and understanding of the scientific facts, concepts, techniques and terminology in the specification
b) show understanding of how scientific evidence is collected and its relationship with scientific explanations and theories
c) show understanding of how scientific knowledge and ideas change over time and how these changes are validated.

AO2 Application of skills, knowledge and understanding
Candidates should be able to:
a) apply concepts, develop arguments or draw conclusions related to familiar and unfamiliar situations
b) plan a scientific task, such as a practical procedure, testing an idea, answering a question, or solving a problem
c) show understanding of how decisions about science and technology are made in different situations, including contemporary situations and those raising ethical issues
d) evaluate the impact of scientific developments or processes on individuals, communities or the environment.

AO3 Practical, enquiry and data handling skills
Candidates should be able to:
a) carry out practical tasks safely and skilfully
b) evaluate the methods they use when collecting first-hand and secondary data
c) analyse and interpret qualitative and quantitative data from different sources
d) consider the validity and reliability of data in presenting and justifying conclusions.

## GCSE Certificating Candidates

There are multiple routes to certification in GCSE Biology. Firstly, unit 1 can be taken either as a written paper or as two objective test papers. Secondly, each unit, except for the controlled assessment, can be entered at foundation or higher tier level and candidates can certificate using a mixture of tiers. The four analyses reported here are for candidates who certificated using purely foundation tier and purely higher tier units via the written paper route and the objective test route. The separate sciences tend to have more higher tier entries than foundation tier entries, which makes sense because candidates who would struggle to achieve grade Cs in single sciences would probably do better on a core/combined science course. Among higher tier candidates, entries are far higher for the written paper route than they are the objective test route. The question paper analyses in the later sections therefore focus on the written papers rather than the objective test papers.

Table 27 shows the achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE Biology via the higher tier written paper route in summer 2011.

Table 27. The achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE Biology (higher tier written papers) in summer 2011 ( $\mathrm{N}=$ 26,001 ).

| Unit | Intended <br> Weight | Achieved <br> Weight | AO1 | AO2 | AO3 | Ach <br> AO1 | Ach <br> AO2 | Ach <br> AO3 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| BLY1H <br> Written Paper | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 2 . 4 0}$ | 12.00 | 13.00 | 0.00 | 10.75 | 11.65 | 0.00 |
| BLY2H <br> Written Paper | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 6 . 6 0}$ | $\mathbf{1 2 . 0 0}$ | 13.00 | 0.00 | 12.77 | 13.83 | 0.00 |
| BLY3H <br> Written Paper | $\mathbf{2 5 . 0 0}$ | $\mathbf{3 1 . 6 0}$ | 12.00 | 13.00 | 0.00 | 15.17 | 16.43 | 0.00 |
| BLYC <br> Controlled <br> Assessment | $\mathbf{2 5 . 0 0}$ | $\mathbf{1 9 . 3 0}$ | 0.00 | 5.00 | $\mathbf{2 0 . 0 0}$ | 0.00 | 3.86 | 15.44 |
| Total | $\mathbf{1 0 0 . 0 0}$ | $\mathbf{9 9 . 9 0}$ | $\mathbf{3 6 . 0 0}$ | $\mathbf{4 4 . 0 0}$ | $\mathbf{2 0 . 0 0}$ | $\mathbf{3 8 . 6 9}$ | $\mathbf{4 5 . 7 7}$ | $\mathbf{1 5 . 4 4}$ |
| Difference |  |  |  |  |  | $\mathbf{2 . 6 9}$ | $\mathbf{1 . 7 7}$ | $\mathbf{- 4 . 5 6}$ |

The controlled assessment unit, BLYC, has achieved a weighting lower than that intended ( $-5.7 \%$ ): a little over three quarters of the intended weight. The written papers are on balance overweighted. Although BLY1H is underweighted, BLY2H and BLY3H are overweighted and, since all three papers have a common weighting of assessment objectives, it is their collective weighting which is important in the context of the assessment objectives (though not necessarily for subject content). AO1 and AO2 are concentrated in the written papers and are thus overweighted overall, though AO2 is also assessed by the controlled assessment and consequently is slightly less overweighted than AO1. AO3 is exclusive to the controlled assessment and is thus underweighted.

Table 28 shows the achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE Biology via the foundation tier written paper route in summer 2011.

Table 28. The achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE Biology (foundation tier written papers) in summer 2011 ( $\mathrm{N}=$ $1,564)$.

| Unit | Intended <br> Weight | Achieved <br> Weight | AO1 | AO2 | AO3 | Ach <br> AO1 | Ach <br> AO2 | Ach <br> AO3 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| BLY1F <br> Written Paper | $\mathbf{2 5 . 0 0}$ | $\mathbf{1 9 . 8}$ | 12.00 | 13.00 | 0.00 | 9.50 | 10.30 | 0.00 |
| BLY2F <br> Written Paper | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 2 . 7}$ | 12.00 | $\mathbf{1 3 . 0 0}$ | 0.00 | 10.90 | 11.80 | 0.00 |
| BLY3F <br> Written Paper | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 7 . 2}$ | $\mathbf{1 2 . 0 0}$ | 13.00 | 0.00 | 13.06 | 14.14 | 0.00 |
| BLYC <br> Controlled <br> Assessment | $\mathbf{2 5 . 0 0}$ | $\mathbf{3 0 . 3}$ | 0.00 | 5.00 | 20.00 | 0.00 | 6.06 | 24.24 |
| Total |  |  |  |  |  |  |  |  |

There is something of a reversal in the pattern of achieved weightings for the foundation tier when compared with the higher tier. The controlled assessment, BLYC, exceeds its intended weight $(+5.3 \%)$ whilst the written papers, with the exception of BLY3F, are underweighted. The result is that

AO1 and AO2 are slightly underweighted overall - AO2 less so because of its inclusion in BLYC whilst AO 3 is overweighted overall.

Table 29 shows the achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE Biology via the higher tier objective test route in summer 2011.

Table 29. The achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE Biology (higher tier objective tests) in summer 2011 ( $\mathrm{N}=1,398$ ).

| Unit | Intended <br> Weight | Achieved <br> Weight | AO1 | AO2 | AO3 | Ach <br> AO1 | Ach <br> AO2 | Ach <br> AO3 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| BLY1APH <br> Objective Test | $\mathbf{1 2 . 5 0}$ | $\mathbf{1 0 . 1}$ | 6.00 | 6.50 | 0.00 | 4.85 | 5.25 | 0.00 |
| BLY1BPH <br> Objective Test | $\mathbf{1 2 . 5 0}$ | $\mathbf{1 0 . 1}$ | 6.00 | 6.50 | 0.00 | 4.85 | 5.25 | 0.00 |
| BLY2H <br> Written Paper | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 7 . 6}$ | 12.0 <br> 0 | 13.00 | 0.00 | 13.25 | 14.35 | 0.00 |
| BLY3H <br> Written Paper | $\mathbf{2 5 . 0 0}$ | $\mathbf{3 3 . 2}$ | 12.0 <br> 0 | 13.00 | 0.00 | 15.94 | 17.26 | 0.00 |
| BLYC <br> Controlled Assessment | $\mathbf{2 5 . 0 0}$ | $\mathbf{1 9 . 0}$ | 0.00 | 5.00 | 20.00 | 0.00 | 3.80 | 15.20 |
| Total | $\mathbf{8 7 . 5 0}$ | $\mathbf{8 9 . 9 0}$ | $\mathbf{3 0 . 0}$ <br> $\mathbf{0}$ | $\mathbf{3 7 . 5 0}$ | $\mathbf{2 0 . 0 0}$ | $\mathbf{3 4 . 0 3}$ | $\mathbf{4 0 . 6 7}$ | $\mathbf{1 5 . 2 0}$ |
| Difference |  |  |  |  |  | $\mathbf{4 . 0 3}$ | $\mathbf{3 . 1 7}$ | $\mathbf{- 4 . 8 0}$ |

The achieved weightings for the higher tier objective test route follow the same pattern as the higher tier written paper route: the unit 1 s and the controlled assessment are underweighted whilst units 2 and 3 are overweighted. Overall, the impact is similar, with AO1 and AO2 achieving above their intended weights and AO3 achieving below its intended weight.

Table 30 shows the achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE Biology via the foundation tier objective test route in summer 2011.

Table 30. The achieved weightings of units and their corresponding assessment objectives for candidates certificating GCSE Biology (foundation tier objective tests) in summer 2011 ( $\mathrm{N}=$ 3,762).

| Unit | Intended <br> Weight | Achieved <br> Weight | AO1 | AO2 | AO3 | Ach <br> AO1 | Ach <br> AO2 | Ach <br> AO3 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| BLY1APF <br> Objective Test | $\mathbf{1 2 . 5 0}$ | $\mathbf{9 . 6 0}$ | 6.00 | 6.50 | 0.00 | 4.61 | 4.99 | 0.00 |
| BLY1BPF <br> Objective Test | $\mathbf{1 2 . 5 0}$ | $\mathbf{9 . 5 0}$ | 6.00 | 6.50 | 0.00 | 4.56 | 4.94 | 0.00 |
| BLY2F <br> Written | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 3 . 7 0}$ | 12.00 | 13.00 | 0.00 | 11.38 | 12.32 | 0.00 |
| BLY3F <br> Written | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 7 . 7 0}$ | 12.00 | 13.00 | 0.00 | 13.30 | 14.40 | 0.00 |
| BLYC <br> Controlled Assessment | $\mathbf{2 5 . 0 0}$ | $\mathbf{2 9 . 6 0}$ | 0.00 | 5.00 | 20.00 | 0.00 | 5.92 | 23.68 |
| Total | $\mathbf{8 7 . 5 0}$ | $\mathbf{9 0 . 5 0}$ | $\mathbf{3 0 . 0 0}$ | $\mathbf{3 7 . 5 0}$ | $\mathbf{2 0 . 0 0}$ | $\mathbf{2 9 . 2 3}$ | $\mathbf{3 7 . 5 9}$ | $\mathbf{2 3 . 6 8}$ |
| Difference |  |  |  |  |  | $\mathbf{- 0 . 7 7}$ | $\mathbf{0 . 0 9}$ | $\mathbf{3 . 6 8}$ |

The achieved weightings for the foundation tier objective test route follow the same pattern as the foundation tier written paper route: the unit 1s and unit 2 are underweighted whilst units 3 and 4 are overweighted. Overall, AO1 achieves slightly less than its intended weight, AO2 achieves approximately its intended weight, and AO3 achieved below its intended weight.

For both the foundation and higher tier routes, unit 1 - whether in the form of the written paper or the objective test papers - achieved below its intended weight. Although, without further investigation, this is speculative, it is possible that the cause of this underweighting is resitting of the first unit. Early units in general tend to be resat more than later ones. Owing to the fact that candidates use their best mark to certificate, resitting could have the effect of bunching candidates' marks, in turn lowering the discrimination between candidates relative to that of other units.

The performance of the controlled assessment is interesting: it is overweighted for the foundation tier routes and underweighted for the higher tier routes. In the case of the foundation tier routes, the controlled assessment is the only unit that is not tiered. A consequence of this is that candidates can obtain uniform marks equivalent to the full range of grades: $A^{*}$-G. This gives the controlled assessment the potential to be more discriminating than the written papers, on which candidates uniform marks are capped at a top grade C. ${ }^{3}$ In the case of the higher tier routes the explanation is probably less technical: it is likely that the controlled assessment simply does not discriminate between the higher tier candidates as affectively as do the written papers. Although the controlled assessment grade scale is relatively longer compared with the higher tier written papers, it is considerably less likely that higher tier candidates score at the bottom of the controlled assessment scale than it is that foundation tier candidates score at the top of it.

These explanations are speculative, but could be investigated further before concern is raised about the units or particular exam papers concerned. The performance of the unit 1 s in particular could have more to do with the typical order in which units are taken, the resit behaviour of centres, and the rules governing it.

These analyses assume that, within each unit, the assessment objectives have achieved their intended weights. It is possible that, within a unit, a given assessment objective is over- or underweighted. This could potentially offset or exacerbate the effects of an imbalance in the weighting of units. An item level analysis is required to confirm or refute this. It should be noted that the majority of certificating candidates will not have taken all of their units in the certificating series. To sample such candidates would introduce two fundamental problems: first, they are few in number; second, they are unrepresentative of how candidates enter for units. It would be unwise to draw conclusions from their data; rather, it would be better to monitor the weightings over several series. If there are stable, undesirable patterns in the data, structural changes to units or improvements to the setting and/or marking of questions may be desirable.

## BLY1F - Biology 1

Table 31 shows the intended and achieved weights for the questions and their corresponding assessment objectives for BLY1F. Candidates must answer all questions on this paper. The results show that AO 1 is overweighted by $+13.9 \%$ at the expense of AO 2 , which is underweighted by $-13.9 \%$; rather than the intended 48:52 split, the achieved weightings are approximately 62:38.

[^2]
## BLY1H - Biology 1

Table 32 shows the intended and achieved weights for the questions and their corresponding assessment objectives for BLY1H. Candidates must answer all questions on this paper. The results show that, as on the foundation tier paper, the achieved weight for AO1 is higher than intended (+17.58\%) whilst the achieved weight for AO2 is lower than intended (-17.58\%), again an approximately 60:40 achieved weighting compared with the intended weighting of 43:57.

## BLY2F - Biology 2

Table 33 shows the intended and achieved weights for the questions and their corresponding assessment objectives for BLY2F. Candidates must answer all questions on this paper. The results show that the achieved weightings of AO 1 and AO 2 are within $4 \%$ of the intended weights: approximately 52:48 compared with 48:52.

## BLY2H - Biology 2

Table 34 shows the intended and achieved weights for the questions and their corresponding assessment objectives for BLY2H. Candidates must answer all questions on this paper. The results show that the achieved weightings of AO 1 and AO 2 are in line with the intended weights: approximately 57:43.

## BLY3F - Biology 3

Table 35 shows the intended and achieved weights for the questions and their corresponding assessment objectives for BLY3F. Candidates must answer all questions on this paper. The results show that the achieved weight for AO1 is higher than intended ( $+16.85 \%$ ) whilst the achieved weight for AO2 is lower than intended (-16.85\%), an approximately 55:45 achieved weighting compared with the intended weighting of 39:61.

## BLY3H - Biology 3

Table 36 shows the intended and achieved weights for the questions and their corresponding assessment objectives for BLY3H. As on the foundation tier paper, the achieved weight for AO 1 is higher than intended ( $+13.88 \%$ ) whilst the achieved weight for AO 2 is lower than intended $(-13.88 \%)$, again an approximately 55:45 achieved weighting compared with the intended weighting of 41:59.

## General Discussion \& Conclusions

The primary purpose of this study was to demonstrate a method for investigating and reporting on the achieved weighting of assessment objectives as a facet of validity; the secondary purpose was to identify some of the kinds of problems that occur with respect to achieved weightings of assessment objectives, and to consider the possible causes and solutions that may be fed back into the specification design and examination paper-writing processes. The unit-subject analyses for the GCSE and A-level suites and the question-unit analyses for the six individual specifications constitute the demonstration of the method. The commentaries on these analyses provide some examples of where the achieved weights of the assessment objectives have deviated considerably from those intended and, where possible, offer some insight into possible underlying causes. Most of the issues identified in the commentaries, and summarised below, fall under the broad heading of assessment structures.

Having the assessment objectives distributed evenly across units poses less risk to the overall weighting of the assessment objectives because underweighting on one unit is balanced out by overweighting on another. The underweighting of AS units and the overweighting of A2 units within Alevel is common and thus the distribution of the assessment objectives between the two levels could have a large impact on their overall achieved weights. Nonetheless, although this report has focussed on achieved weightings of assessment objectives, assessment validity is a much broader matter than this. How content is organised into units of assessment - particularly in qualifications designed to be taken modularly over the duration of a course of study - should also be informed by concerns such as the coherence of the content and how it relates to programmes of teaching and learning, the mode of assessment most appropriate for the assessment objectives, and so on.

Having practical-type units with very different assessment objectives to the written paper units poses a greater risk of overall imbalance, as performance on these units tends to be negatively skewed. This is a common issue in subjects with performance elements, such as Dance, Music, or PE, especially at A-level, where many of the candidates who choose to take them are very accomplished in the practical domain. There is a possible tension between spreading the candidates out more effectively and keeping the demand of the assessment appropriate to the level of the qualification concerned. It is also possible that practical assessment objectives will not correlate strongly with more academic ones and, if their intended weight is already relatively low, they will have relatively little influence on the total score. If the practical element contains legitimate assessment objectives and constitutes an appropriate proportion of the assessment, the poor correlation and resulting low weighting may be something that we must live with.

Coursework contained in the AS part of A-level is more likely to achieve a weight comparable to that of its written unit counterpart than is a coursework unit contained in the A2 part of A-level. This could indicate that coursework in the A2 needs to be more challenging than it is generally. Again, as with practical units, when we use performance criteria (even relatively flexibly, as is the case with GCSEs and A-levels), and candidates meet or exceed those criteria, they have demonstrably earned those marks or grades. What is perverse is that, at subject level, the achieved weightings of the units leads to the best candidates being differentiated largely on the basis of the written paper units. The alternative - to allow greater discrimination at the top of the scale for the coursework or practical units - might result in excellence in these domains overcompensating for weakness in others and underrecognition of candidates who meet, but do not necessarily exceed, the criteria for the highest grades. In that sense, the criteria place a cap on the weighting of the coursework or practical, which may have the desirable effect of promoting and recognising more balanced performances.

The number of marks and/or separate questions available for assessment objectives affects the volatility of the achieved weighting of those assessment objectives as well as the precision with which they can be met, an example being A-level maths with a paper on which only 2 marks out of 75 are allocated to some areas of content. This is essentially a matter of reliability: the longer and narrower in scope a test is, the more reliable it tends to be. Reliability is a necessary, but not sufficient, condition for validity so, if we cannot measure an assessment objective reliably, we cannot claim that our assessment of it is valid. Although increasing the total marks used to assess multiple assessment objectives should improve overall reliability, a test can only be so long, so relatively less reliable measurement of more minor assessment objectives is, to an extent, inevitable.

Controlled assessment at GCSE showed a small but significant tendency to be overweighted compared with written paper units, which is in contrast to the tendency in A-level for coursework units to be underweighted. The key difference between them could be that the timed element of controlled assessment allows greater heterogeneity of performance. It is debatable as to whether this is as valid as allowing a candidate to demonstrate a more polished performance but, in terms of discriminating between candidates for assessment purposes, it appears to be more effective.

There can be exceptions when certain Assessment Objectives might not be able to meet their intended weighting because they are uncorrelated with the score on the main construct(s). Quality of Written Communication (QWC) / Spelling, Punctuation, and Grammar (SPAG) is such an example and it is arguable that the purpose of something like QWC or SPAG should not be to discriminate between candidates but to encourage them to write carefully. In this case, it might not even be desirable to achieve the intended weighting of these particular assessment objectives, let alone possible.

The analyses and reports exemplified here are the basis for screening specifications and the evidence they contain is best considered in the context of other information. Some of the structural issues are the consequence of the generic assessment models we use, such as having AS and A2 levels within the A-level, tiered papers at GCSE, or the (partially nonlinear) transformation of raw marks on to the uniform mark scale; others stem from the mode of assessment chosen to measure particular assessment objectives. These choices can impact on validity in ways that are not captured by the reporting of achieved weightings, so the latter must be considered within a wider context. Structural changes would normally be dealt with when specifications are redeveloped and with a view to changing qualification models, or subject group models, rather than individual specifications.

In some cases, screening may identify question papers that are not functioning as intended. There are essentially two different - though not necessarily exclusive - ways in which this might be dealt with. In one case, further analyses of how candidates have responded to items and how those items have been marked by examiners could inform the setting and marking of future questions and question papers. Of course, there are interdependencies between questions within a paper and between units within a specification - weightings are relative, so every increase has an equal and opposite decrease - therefore the results could be unpredictable. It needs to be demonstrated that this kind of feedback on the performance of the assessment can be translated into measurable improvements in the performance of future assessments. The second approach would include post hoc technical solutions to rebalance the weightings of assessment objectives for candidates who have taken a particular paper. For example, rescaling the raw marks for individual questions to achieve the intended weighting of assessment objectives on the paper might change the rank order of candidates to better reflect their performances against the assessment objectives. However, many candidates prepare for exams and plan their time in them based on the mark allocations for questions. Reweighting them would undermine that; therefore, the re-weighted rank order would not necessarily be the same as that achieved had the candidates sat the paper with the rescaled raw mark totals in the first place. Furthermore, reweighting of assessment objectives is likely to wash back on teaching and
learning, thus the solution to one question paper problem may become the cause of the next. Again, this serves to highlight the fact that the design of an assessment instrument is likely to be one of optimisation, containing various tradeoffs and compromises between different validity considerations, one of which is the weighting of assessment objectives.

Appendix 2 - GCSE: The intended and achieved weights of assessment objectives by specification
Table 38. GCSE: The intended and achieved weights of assessment objectives by specification. Absolute differences: Red $<\mathbf{1} \%$, Amber $\geq-1 \%$ to $\leq$ $1 \%$, Green $>1 \%$. Proportional differences: Red $<\mathbf{1 0 \%}$, Amber $\geq-10 \%$ to $\leq 10 \%$, Green $>10 \%$.

## Appendix 4 - A-level: The intended and achieved weights of assessment objectives by specification

Table 40. A-level: The intended and achieved weights of assessment objectives by specification. Absolute differences: Red $<1 \%$, Amber $\geq-1 \%$ to $\leq$ $1 \%$, Green $>1 \%$. Proportional differences: Red $<\mathbf{1 0 \%}$, Amber $\geq-10 \%$ to $\leq 10 \%$, Green $>10 \%$.

[^0]:    ${ }^{1}$ Of course, GCSE and A-level assessment permits compensatory performance within and across units of assessment, so not all candidates will have the same - or the ideal - performance profile; problems with achieved weightings are likely to favour particular performance profiles, though, and are therefore undesirable.

[^1]:    ${ }^{2}$ The unit-subject analyses use uniform (UMS) marks because: (i) the conversion from raw to uniform marks changes the relative spread of marks on the unit; (ii) non-linearity in the conversion may affect the rank order of candidates and, therefore, the unit-subject correlations; and (iii) we would otherwise need to limit the analyses to a subset of candidates who all sat the various papers in the same series. The question-unit analyses use the raw marks.

[^2]:    ${ }^{3}$ Assuming that all candidates are entered for the appropriate tier, this ought not to be an issue, but it is an assumption which often does not hold true. For example, 11.5\% of candidates for BLY1F in June 2011 achieved a raw mark of 35 or more (up to the maximum of 45 ). The raw mark of 35 was the position of the uniform mark cap, so all of these candidates received the maximum uniform mark (69) available for the unit.
