RESEARCH PAPER 04／19
1 March 2004

## Social Indicators

This Research Paper summarises a wide range of social statistics．Subjects covered include crime and justice， defence，education，elections，health and population． Regular updates of individual pages，together with spreadsheets containing raw data，are available to members and staff on the parliamentary intranet．

This edition includes：

## Article：EU enlargement： <br> Basic Indicators for accession countries <br> Topical subject pages：

－Mathematics：study and teacher recruitment
－The MMR vaccine

## Recent Library Research Papers:

## I Introduction to Social Indicators

Social Indicators consists of a series of subject pages that cover a wide range of social statistics. The pages are individual Standard Notes, available to MPs and staff on the PDVN, and are updated when new statistics are available. The subject pages combined in a printed Research Paper three times a year. Each edition of the Research Paper includes an article and topical subject pages.

The Social Indicators intranet pages enable MPs and staff to download underlying data in the form of spreadsheet files. ${ }^{1}$ These files often include more detailed statistics and longer time series.

Subjects have been chosen from those that receive the most public attention and those that we think are most useful to MPs. These include some international comparisons alongside nationally based statistics. Every attempt has been made to match the geographical coverage of these topics to the powers of the UK parliament. Where possible, links are included on the intranet pages to statistics that cover the rest of the UK.

The coverage of Social Indicators is intended to be complementary to the Economic Indicators Research Paper, which is produced by the Economic Policy and Statistics section.

The range of topics included in Social Indicators and the content of the intranet pages is regularly reviewed. If you have views on either, please contact the Head of Section, Richard Cracknell (x4632) or the editor, Adam Mellows-Facer (x6969).

[^0]
## II Contacts for further information

Members and staff who require further information on a particular subject should contact the relevant statistician as detailed below. A comprehensive guide to the subject coverage of Research Service specialists is available in Who Does What in Research.

## III EU Enlargement:

## Basic indicators for accession countries

On 1 May 2004, ten countries will accede to the European Union: Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, the Slovak Republic and Slovenia. Three further countries, Bulgaria, Romania and Turkey applied for EU membership. Bulgaria and Romania hope to join by 2007, while Turkey is not currently negotiating its membership.

| EU15 | 3,234,568 | 377,850 | 23,210 |
| Bulgaria | 110,910 | 7,910 | 5,710 |
| Romania | 238,391 | 22,408 | 5,560 |
| Turkey | 769,604 | 68,670 | 5,230 |

PPP $=$ Purchasing Power Parity

The 10 accession countries will add 75 million to the current EU15 population and take the EU25 to just over 450 million inhabitants. The accession countries are relatively less well off than the EU15. Their GDP per capita is less than half (46 percent) the EU15 average. Only Cyprus and Slovenia have per capita GDPs higher than Greece and Portugal, which are currently the poorest of the EU15 members.

Population growth, infant mortality and life expectancy, 2001

|  | Population growth per | Infant mortality per 1,000 live births | Life expectancy (years) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1,000 |  | Male | Female |
| Czech Republic | -0.3 | 4.0 | 72.1 | 78.5 |
| Estonia | -4.2 | 8.4 | 65.6 | 76.4 |
| Cyprus | +2.3 | 5.6 | 75.3 | 80.4 |
| Latvia | -7.8 | 11.0 | 64.5 | 75.6 |
| Lithuania | -3.3 | 8.6 | 67.5 | 77.7 |
| Hungary | -2.5 | 8.1 | 67.2 | 75.7 |
| Malta | +8.2 | 4.4 | 75.1 | 79.3 |
| Poland | -0.3 | 7.7 | 70.2 | 78.4 |
| Slovenia | +2.0 | 4.2 | 72.7 | 80.1 |
| Slovak Republic | -4.3 | 6.2 | 69.4 | 77.6 |
| Acc. Countries | -1.2 | 7.2 | 69.3 | 77.5 |
| Austria | +2.2 | 4.8 | 75.4 | 81.2 |
| Belgium | +4.3 | 5.0 | 74.6 | 80.8 |
| Denmark | +3.6 | 4.9 | 74.3 | 79.0 |
| Finland | +2.7 | 3.2 | 74.6 | 81.5 |
| France | +5.2 | 4.6 | 75.5 | 83.0 |
| Germany | +2.2 | 4.5 | 74.7 | 80.7 |
| Greece | +3.2 | 5.9 | 75.4 | 80.7 |
| Ireland | +14.7 | 5.8 | 73.0 | 78.5 |
| Italy | +3.0 | 4.3 | 76.7 | 82.9 |
| Luxembourg | +10.2 | 5.9 | 74.9 | 81.3 |
| Netherlands | +7.4 | 5.4 | 75.7 | 80.6 |
| Portugal | +7.1 | 5.0 | 73.5 | 80.3 |
| Spain | +7.1 | 3.9 | 75.6 | 82.9 |
| Sweden | +3.0 | 3.7 | 77.5 | 82.1 |
| United Kingdom | +3.7 | 5.5 | 75.7 | 80.4 |
| EU15 | +4.1 | 4.6 | 75.2 | 81.2 |
| Bulgaria | -4.8 | 14.4 | 68.5 | 75.1 |
| Romania | -2.0 | 18.4 | 67.7 | 78.8 |
| Turkey | +1.8 | 38.7 | 66.4 | 71.0 |

With the exception of Slovenia, the populations of the Eastern European accession countries fell in 2001. The combined populations of the accession countries fell by 0.12 percent while the population of EU15 rose by 0.41 percent.

There is considerable variation in infant mortality rates. Overall, the rate is higher in the accession countries than in the EU15, but in the Czech Republic, Malta and Slovenia it is lower than the EU15 average. On average, life expectancy is six years lower in men and four years lower in women in the accession countries than in the EU15

Agriculture's contribution to the economy - 2001

With the exception of Malta and Slovenia, the accession and candidate countries are relatively highly dependent on agriculture. 4.1 percent of gross value added in the accession countries arises from this sector, compared with 2.1 percent in the EU15. In the accession countries, 13 percent of employment is in agriculture, while the equivalent figure for the EU15 is 4 percent.

## Public support for enlargement

The chart below summarises the results of a recent survey of the opinions towards EU enlargement of residents of EU15 states:

Euro barometer Oct-Nov 2003

Across the EU15, more people support enlargement than oppose it. On average 47 percent of EU15 citizens are in favour of enlargement and 36 percent against, with a further 18 percent who "don't know".

In nine Member States those who favour enlargement outweigh those against it. However, in Belgium, Austria, the UK, Germany, and France, a majority of those expressing an opinion are against enlargement.

The chart below summarises opinion towards EU membership in the accession countries:

52 percent of the population of the new accession countries support EU membership. In all but three of these countries (Latvia, the Czech Republic and Estonia), at least half of respondents consider their country's future membership to be a positive development. The populations of the three further applicant states are even more optimistic about EU membership.

## Mathematics: study and teacher recruitment

- Recruitment to mathematics initial teacher training courses has risen in each year since 2000/01.
- The percentage shortfall between actual recruitment and places available decreased from 35 percent in 2000/01 to 16 percent in 2003/04.
- Acceptances to study mathematics at degree level have declined as a percentage of total acceptances in each year, from 1.4 percent in 1997 to 1.1 percent in 2002.
- Mathematics ranked $28^{\text {th }}$ in terms of degree course acceptances by subject in 2002. Biology ranked $21^{\text {st }}$, chemistry $39^{\text {th }}$ and physics $43^{\text {rd }}$. Computer science ranked the top subject by this measure.

## The MMR vaccine

- Latest Health Protection Agency data show that combined measles, mumps and rubella vaccine (MMR) uptake across the UK by second birthday was 79.8 percent between July and September 2003. An immunisation rate of at least 95 percent is required in order to achieve 'herd immunity'.
- MMR immunisation rates in England have fallen by 10 percentage points since 1995/96 to 82 percent in 2002/03.
- There is considerable regional variation in uptake. 58 percent of children in Kensington and Chelsea Primary Care Trust area were immunised by their second birthday in 2002/03, compared to 92 percent in West Cumbria.

Highest and lowest MMR immunisation rates by PCT England 2002/03, \% immunised by second birthday

## Agricultural incomes and subsidies

- Provisional estimates suggest that, in 2003, total income from farming (TIFF) continued to recover from its alltime low in 2000, increasing 28 per cent year-on-year.
- TIFF per full time person equivalent is estimated to have risen by 32 per cent in real terms in 2003, reaching $£ 15,500$, as the long-term downward trend in the number of farmers continued.
- The largest increases in TIFF in recent years were in the early 1990s. TIFF increased by over a third in 1993 alone. In 1995, TIFF in the UK was $£ 6.5$ billion at today's prices.
- Total spending under the CAP and on national grants and subsidies is forecast at $£ 3.1$ billion in 2002/03. Around one-third is under the Arable Area Payments Scheme Around 85 percent of total spending is EU-funded

## Agricultural labour and output

- The total labour force in UK agriculture has decreased in each year since 1984. In the year to June 2003 there was a fall of 18,000, or 3 percent.
- The volume of agricultural production has been fairly stable since the mid-1980s. However, within this total there have been very different trends. Production of wheat, oilseeds, sugar beet and poultry has increased since 1985, while barley, fruit, vegetables, cattle, pigs, sheep and milk have all declined.
- In 2002 output grew for cereals, industrial crops (oilseeds, hops etc), horticulture and livestock (particularly cattle and sheep in the wake of foot and mouth disease). There were falls for fruit, potatoes and other crops.

## Police numbers

- At the end of August 2003 police strength stood at 136,386 , the highest ever number of full time equivalent officers.
- Police forces recruited 11,104 officers over the 12 months to March 2003, 9 percent more than the previous year.
- The proportion of women in the police service in England and Wales has increased steadily from 7 percent in March 1977 to 19 percent by March 2003.
- On 31 March 2003, there were 3,868 minority ethnic officers in the 43 police forces of England and Wales. Ethnic minority strength as a proportion of total police service strength has increased from 1.0 percent in 1989 to 2.9 percent by March 2003.

## Six month changes in police officer strength

England and Wales 1997-2003

## Police funding

- External provision for police forces in England and Wales consists of all Home Office police grants, Revenue Support Grant (RSG) and Business Rates (NNDR).
- Gross revenue expenditure, in real terms, increased every year between 1996/97 and 2003/04, except 2002/03.
- In 2001/02 80 percent of police forces' gross revenue expenditure was financed through government. In 2003/04 this proportion is expected to fall to less than 70 percent. This was due to a large fall in real Home Office police grants.
- The amount of police expenditure financed through council tax has doubled, in real terms, between 1996/97 and 2003/04.
- Council tax now accounts for 20 percent of police force expenditure finance, compared to 12 percent in 2001/02.

## Crime

- There are two main measures of crime: the number of crimes recorded by the police and crimes measured under the British Crime Survey (BCS)
- The BCS measures crimes against adults ( 16 and over) living in private households in England and Wales. The 2002/03 BCS estimate for such crimes was 12.3 million, a decrease of 2 percent on 2001/02.
- 5.9 million offences were recorded by the police in the year to March 2003, a $7 \%$ increase over the previous years figure. After estimating for the effects of the recently implemented National Crime Recording Standard the total number of offences recorded fell by 3 percent.
- It is estimated that total crimes recorded in 2002/03 were 10 percent higher than they would have been under pre-NCRS recording. Recorded Violence against the Person (VATP) crime was estimated to be 23 percent higher and burglary from a dwelling 3 percent higher than otherwise would have been the case. Drug offence figures are unaffected. The figures in the chart below have been adjusted for the NCRS effect.

Trends in recorded crime by offence
Index 1997/98 = 100

Annual \% change in police recorded crime: 1982-2002/03

\% change in BCS crime 1981-2002/03

## Crime: international comparisons

- Due to difference in recording practices absolute comparisons between recorded crime levels in different countries may be misleading. However, the definition of homicide is similar in most countries.
- The police in England and Wales recorded 1.6 homicides per 100,000 population in 1999-2001. In Scotland 2.2 homicides per 100,000 population were recorded, compared to 2.7 in Northern Ireland.
- The United States has the highest homicide rate of major developed countries, 5.6 per 100,000 in 1999-2001. In South Africa the rate in 1998-2000 was 55.9 homicides per 100,000 population.
- The homicide rate in London is above that in Paris and Berlin but well below that in New York.
- Contact crimes are robbery, assaults with force and sexual assaults.

Homicides per 100,000 population, 1999-2001
Excludes 11 September 2001 attacks

Homicides per 100,000 population, 1999-2001

## Victimisation rate

$\%$ victim of contact crime once or more in 1999

## Drug misuse

- In 2002/03 82,000 highest ever recorded number of drug mis-users presented for treatment for the first time in England, an increase of 7 percent on 2001/02.
- The number of drug users starting agency episodes in 2002/03 was more than double the total recorded in 1993/94.
- 18 percent of drug mis-users who were in treatment during 2002/03 successfully completed their treatment. 40 percent were still in at the end of March 2003.
- Between 1990 and 2000 the number of seizures of controlled substances doubled from 61,000 to 124,000 . Cannabis was the controlled substance seized most frequently, accounting for 73 percent of all seizures in 2000, compared to heroin (13 percent) and ecstasy ( 8 percent).
- The Home Office has not published data relating to drug seizures for periods later than 2000 (last published in 2002). A review of statistical outputs is currently in progress, primarily to ensure that UK statistics are harmonised with those relating to seizures and drug offending published across the EU.

## Prison population

- The prison population reached an all-time high of 74,594 on 20 February 2004, an increase of 3.6 percent over the year.
- That total is 7,800 above the certified normal accommodation of the prison estate and 500 below the maximum safe operational capacity.
- The prison population in post-war England and Wales has been rising steadily. Over the past decade, however, this increase has become more marked. Between 1992 and 2002 the average prison population increased by 55 percent.
- In the UK there were 126 prisoners per 100,000 population in 2001, the second highest rate in Western Europe, after Portugal. The US, which has almost 2 million prisoners, has the highest rate in the developed world (689) while Japan (50) has the lowest.

## Defence employment

- There have been large-scale reductions in the size of UK regular and reserve force since 1990. These follow from the restructuring set out in Britain's Defence for the 90s and the Defence Costs Study.
- The Strategic Defence Review (SDR), presented to Parliament in July 1998, proposed that the establishment of the regular Army should increase to 111,300 .
- The SDR set targets of full manning of the RAF by 2000, of the Navy by 2002 and of the Army by 2004. At $1^{\text {st }}$ January 2004 the trained strength of the RAF was 850 below requirement. The strength of the Navy was 1,000 below requirement and the Army was 2,900 below requirement
- Between 1 April 1997 and 1 January 2004, the number of UK regular forces fell by 2 percent. Naval service employment fell by 9 percent, and RAF by 6 percent, but Army employment has risen by 4 percent.
- Since 1980 both naval service and RAF employment has fallen by about 40 percent and Army employment by 30 percent.

## Defence expenditure

- Defence expenditure is planned to be 2.3 percent of GDP in the current financial year, remaining at this level until 2005/06. It has been on a downward trend since 1984/85 when the figure was 5.3 percent.
- Planned real terms defence expenditure is almost 30 percent below the figure in 1984/85.
- Defence expenditure other than that on personnel and equipment has increased as a share of the total since 1997/98 This series is no longer published by the Ministry of Defence.
- Military expenditure as a proportion of GDP has fallen since the 1980s in all NATO member countries except Turkey.
- Between 1985 and 1989, average defence expenditure in NATO member countries was 4.6 percent of GDP. By 2003 this had fallen to 2.7 percent

By NATO definition

## Defence exports

- The global value of arms deliveries fell slightly from US $\$ 27.0$ bn in 2001 to US $\$ 25.4 \mathrm{bn}$ in 2002. There has been a downwards trend in evidence since the peak of almost US\$ 49bn in 1997. These figures are in constant 2002 US\$.
- In 1987 the USSR accounted for over one third of the value of arms deliveries. By contrast, Russia accounted for just 5.7 percent in 1998. The Russian share of the market fell from 16.3 percent in 2001 to 12.2 percent in 2002.
- The US share of the world market was 40.3 percent in 2002, compared with 27.0 percent in 1987. The UK was the second largest exporter with 18.5 percent of the market.

## Class sizes

- The average primary class size is 26 pupils, down from 28 in 1998, but still higher than the average of 24 in 1985.
- The percentage of primary pupils in large classes (>30) declined from 33 percent in 1997 to 16 percent in 2003.
- The average secondary class size has been steady at 22 pupils per class in recent years. The average class size fell during the 1980s before rising to current levels in the 1990s.
- A similar trend is evident for the percentage of secondary pupils in large classes ( $>30$ ). The proportion of pupils in large classes rose from 6.3 percent in 1991 to 11.7 percent in 2001, but has been steady in the last two years.

## Class sizes in primary schools in England

Class sizes in secondary schools in England

## Schools

- The number of primary schools has been declining steadily since the mid-1970s, with a 4,300 fall since 1975/76.
- The number of secondary schools has been falling for a longer period of time. Their number fell by 1,700 or around 29 percent between 1970/71 and 2002/03.
- The average size of primary schools in the UK increased slightly between 1997 and 2002, from 223 pupils to 224.
- There was a much larger increase at secondary level, from 840 to 922 pupils, with the total number of pupils increasing to 3.95 m in the same period.
- In the 2002/03 there were also 3,394 nursery, 1,471 special and 2,380 non-maintained (largely independent) schools in the UK.

## Teachers

- The number of primary school teachers in the UK fell by 1.2 percent to 228,800 in 2003, following rises in four consecutive years. The total fell by 36,000 between 1979 and 1985 before rising steadily throughout the late 1980s and early 1990s.
- Secondary teacher numbers rose by 0.9 percent to 243,300 in 2003 , the fifth consecutive year of increases. The total is now back to 1989 levels following a fall of over 50,000 during the 1980s and early 1990s.
- Underlying demographic changes are the main determinant of pupil numbers and hence the demand for teachers. The number of pupils per teacher shows teacher numbers in the context of this demand.
- In primary schools the number of pupils per teacher has declined 0.8 points since 1997. It fell during the 1980s and increased by a similar amount between 1990 and 1998.
- The trend was similar in secondary schools, but the increase since 1990 has been greater. Small decreases in 2001 and 2002 were the first for a decade.

## Examination results

- The percentage of pupils achieving level 4 or above at Key Stage 2 (KS2) rose sharply between 1997 and 2000 in KS2 subjects. From 2001 onwards, results have reached a plateau at $75 \%$ for English, $72-3 \%$ Mathematics, and 86-7\% in Science.
- The percentage of pupils achieving 5 or more GCSEs grades A*-C rose one percentage point to reach a new high at 52.6 percent in 2002/03.
- The percentage of pupils passing at least one exam declined slightly for the first time since 1997/98.
- The percentage of school leavers possessing no passes at GCSE remained constant at 5.4 percent in 2002/03. This is 1.2 percentage points below the level recorded in 1997/98.
- Increased staying-on rates mean that the proportion of 17 year olds with A levels, or their equivalent, has increased dramatically. The percentage with 3 or more A levels almost doubled between 1991/92 and 2002/03.
- The percentage of students with 3 or more A grades rose, irrespective of school type between 1997/98 and 2002/03. However, while the proportion of pupils at selective schools gaining 3 or more A grades increased nearly $50 \%$, at comprehensive schools the rise was only $17 \%$.

## Participation: 16-18 year olds

- The percentage of the $16-18$ age group continuing in full-time education increased rapidly, for all ages, between 1985 and the early 1990s and has changed little since.
- Increases were especially large for 17 and 18 year olds. The percentage of 17 year olds still in full-time education increased from 32 percent to 59 percent, the proportion of 18 year olds more than doubled.
- Changes to the collection of data on further education means there are series discontinuities in both 1994 and 2001. Figures in the chart incorporate both points, data in the table uses only the revised method.
- By August 2002 an estimated 25 percent of 16-18 year olds were not in any education or training.
- The proportion of students in EU countries enrolled in public secondary education is highest in Ireland. The government-dependent private sector is largest in the Netherlands.
- Portugal has the largest proportion of upper secondary students in the independent sector in the EU.

## Applicants and entrants to higher education

- The total number of home applications via the Universities and Colleges Admissions Service (UCAS) has risen in each of the last three years, exceeding 400,000 for the first time in 2002.
- The total number of accepted applicants has risen in each of the last four years. 83 percent of home applicants were accepted in 2002, compared to 69 percent in 1994.
- 1997, the year before the introduction of tuition fees for most students, saw sharp rises in both applications and acceptances.
- Overseas applications comprised 13 percent of total applications and 10 percent of acceptances in 2002.
- UCAS processes applications for full-time and sandwich undergraduate courses only. As they are disproportionately likely to study part-time, a significant number of mature students are excluded from these statistics.

## Participation in higher education

- Both the number of students in higher education and the participation rate have increased significantly since 1979/80.
- The age participation rate of young people has increased from about one-in-eight in 1979/80 to one-in-three at present.
- The total number of students increased by approximately 170,000 in 2001/02. There are now almost 2.25 million students in higher education in the UK.
- The five HE institutions with the highest (above 40 percent) entry rates from social classes IIIM, IV and V that were statistically significantly above their area benchmark are all 'new' universities, colleges or institutes.
- The five HE universities with the lowest (below 15 percent) entry rates from social classes IIIM, IV and V that were statistically significantly below their area benchmark comprise: Oxford; Cambridge; Bristol; Exeter and Durham.

## Education expenditure

- By 2005-06 education expenditure is planned to reach 5.6 percent of GDP, the highest level in the last 25 years.
- Substantial increases in education spending as a proportion of GDP occurred in the early 1990s and from 1999/00 onwards.
- Spending has increased in real terms in most years since 1979-80. The only periods where it fell for two or more consecutive years were in the mid-1980s and mid-1990s.
- Expenditure plans since the 2000 Spending Review have been presented on a resource basis. The figures shown here are on a resource basis from 2000/01 onwards.
- The OECD ranked the UK $9^{\text {th }}$ out of 14 EU countries in terms of education expenditure as a percentage of GDP in 2000.

## General Election results

- Since 1945 both the Conservatives and Labour have been the largest party, in terms of seats won, on eight occasions.
- The Conservatives' best result since 1945 in terms of seats was 1983 when they won 397. Their highest share of the vote was in 1955 when they polled 49.6 percent.
- Labour's 418 seats won in 1997 is their highest ever while their highest share since 1945 was 48.8 percent in 1951, an election that they lost.
- In the 2001 General Election the Liberal Democrats increased their number of seats by six to 52 , the highest post war total by the party or its predecessors.

## Local, Scottish Parliament, Welsh Assembly and European Parliament elections

- The Conservatives now have more councillors in Great Britain than Labour, for the first time since 1991. They were briefly the third party during the mid-1990s.
- Labour's total has fallen by almost 4,000 since 1996, while the Liberal Democrats are some 500 councillors below their 1996 peak.
- 59 English districts ran local election pilot schemes on 1 May 2003 to test new voting and counting methods, covering approximately 6.5 million voters. The schemes included mobile voting and voting by internet, SMS text and digital television.
- Labour won 30 of the 60 seats at the 2003 Welsh Assembly elections, after increasing their share to 38 percent. Plaid Cymru were second, despite their share of the vote falling by 9 percentage points.
- Labour remained the largest party in the Scottish Parliament after the 2003 elections, although their share of the vote fell by 4 percentage points. The SNP were second, despite a 6 percentage point fall in their share of the vote.
- The Conservatives won 36 of the 87 UK seats at the 1999 European Parliament elections to become the largest British party following an 11 percent swing from Labour relative to 1994. The next elections are due in June 2004.

## Turnout

- Turnout at the 2001 General Election was 59.4 percent, the lowest since the introduction of universal suffrage.
- Comparing turnout at the last parliamentary election, the UK was $13^{\text {th }}$ of the EU15.
- Turnout at the 1999 European Parliament election in the UK was 24 percent, the lowest in the EU.

## Opinion polls

- Labour's share of the intended vote has fallen since the 2001 General Election. The Conservatives have gained some ground in recent months, while the Liberal Democrats appear steady at around 20 percent.
- Since November 2002, MORI have used only those certain to vote in calculating their headline figures. Their February poll showed a Labour lead over the Conservatives of one percentage point by this measure. YouGov's January poll shows the Conservatives leading by five percentage points.
- The NHS and hospitals have taken over from defence, foreign affairs and international terrorism as the issue most likely to be identified as the most, or as another important, issue facing Britain as identified by MORI's regular poll

MORI: Issues facing Britain: February 2004
Issues polling over 5\%

## Voter characteristics

- Older people, those in the higher social classes and home owners were disproportionately likely to vote at the 2001 General Election.
- Turnout amongst non-whites was 47 percent, compared to 60 percent amongst white people.
- The voting preferences of men and women were very similar.
- Labour secured at least 30 percent of the vote from all the groups considered in the chart to the right.
- Conservative support was strongly skewed towards older age groups, the higher social classes and home owners.
- The highest Liberal Democrat share of the vote came amongst the 18-24 age group, AB social classes and private renters
- Almost three-quarters of non-whites voted Labour. The Liberal Democrats were second amongst this group with 13 percent

## Energy and $\mathrm{CO}_{2}$ emissions

- Final UK energy consumption declined by 2.7 percent in 2002.
- Transport became the largest energy consuming sector in 1988 and accounted for 35 percent of final consumption in 2002. Consumption by industry has almost halved since 1973.
- In 1960, coal and other solid fuels accounted for over 60 percent of total consumption. By 2002, this had fallen to just 2 percent.
- UK carbon dioxide emissions fell by 18 per cent between 1970 and 2001. Much of this decline has come from a reduction in emissions attributable to industry, while emissions caused by domestic users have also declined slightly. Emissions attributable to transport have more than doubled since 1970.
- The United States accounts for 24 percent of world $\mathrm{CO}_{2}$ emissions, followed by China ( 13 percent) and Russia ( 6 percent). The UK accounts for 2 percent, below its share of GDP.

## Road fuel prices

- A litre of petrol retailed at 76.7 p in January 2004, 16p higher than in January 1997.
- UK fuel prices have risen by 0.5 p (petrol) and 0.9 p (diesel) over the last three months
- The UK has the second highest pump price for unleaded petrol in the European Union, after the Netherlands, while the UK's diesel pump price is the highest in Europe.
- 76 percent of the UK's unleaded petrol pump price is accounted for by taxes and duties, the highest in the EU.
- Excluding tax and duties, the pre-tax price for unleaded petrol is 18 p and diesel 19 p.

## Waiting lists

- 973,000 people were waiting for inpatient admission to NHS hospitals in England at the end of 2003, 185,000 fewer than in March 1997.
- Waits of over 12 months have almost been eradicated. The Government aims to eliminate waits of over 6 months by the end of 2005
- The number of in-patients waiting in Wales was 80,000 in December 2003, 13,000 higher than in March 1997. The number in Scotland was 111,000 in September 2003, 26,000 more than in March 1997.
- In England, 0.2 percent of outpatients were seen more than 26 weeks after a written GP referral in the quarter ended 31 September 2003, compared to 2.9 percent in the quarter to 31 March 1997. 79.5 percent of patients were seen within 13 weeks of written referral in the quarter ended 31 December 2003, compared to 83.1 percent in the quarter to 31 March 1997.

## Health expenditure

- The government plans to spend $£ 61.6$ billion on the NHS in England in 2003/04.
- Real expenditure increases of 7 percent are planned in 2004/05 and 2005/06
- Expenditure in the table is measured on a cash basis prior to 2000/01. From 2000/01 to 2001/02 it is on a Stage 1 resource accounting basis. Subsequently it is shown in Stage 2 resource accounting terms.
- According to the OECD, approximately 7.5 percent of UK GDP is accounted for by health expenditure. In terms of total health spending as a share of GDP, the UK ranks $11^{\text {th }}$ out of 15 EU countries.

## Beds and activity

- During 2002/03 there were on average 183,800 beds available in wards open 24 hours a day. That is approximately half the average 20 years ago and 20,000 fewer than in 1997/98.
- The decline has been less pronounced in general and acute specialties than in mental illness and learning disabilities.
- There were 3.2 percent more finished consultant episodes (FCEs) in 2002/03 than in the previous year, a larger increase than the 0.8 percent rise in 2000/01. The highest rise was 5.9 percent in 1991/92
- The number of A\&E attendances rose from 13.3 million (1991/92) to a peak of 14.6 million (1999/00). There have been small falls in each of the past two years.

## NHS staff

- There were 374,418 whole time equivalent (WTE) nursing midwifery and health visiting staff (excluding agency staff) in September 2002, 13 percent higher than at September 1997.
- Total dental and medical staff numbers (excluding locums) have increased in each year since 1996. This is mainly due to similar increases in the number of hospital medical staff over the same period.
- GP numbers in England have increased slowly since 1997. However, GP registrar numbers have increased by 40 percent.
- In Scotland, WTE hospital medical staff numbers rose in each of the past ten years. At the end of September 2002 there were 8,200 , up 15.8 percent on 1997. Nursing and midwifery staff numbers fell in each year between 1992 and 1998. Subsequent steady increases meant that there were 53,000 in September 2002, up 3.3 percent on 1997.

## Community care

- At 31 March 2003, there were a total of 284,135 permanent and temporary local authority (LA) supported adult residents in England.
- A 7 percent increase since last year is mainly due to the inclusion of people formerly in receipt of preserved rights. Excluding such residents, the number of supported residents has fallen about 5 percent since 2002.
- Numbers in LA staffed homes have fallen steadily, while numbers in independent (private or voluntary) homes have consistently risen.
- Almost 60,000 children were looked after in England at 31 March 2002, of which two-thirds were in foster placements. 3,400 children were adopted from care over the year.
- Less than 20 percent of looked-after children were aged under five, while almost 60 percent were aged 10 or over.
- The 2001 Census recorded 5.2 million informal carers in England and Wales, $10 \%$ of the population. 58 percent of informal carers are female, with almost half all carers aged 45-64.

## Dwellings completed

- 184,000 permanent dwellings were completed in the UK in 2002/03, and increase of 5 percent on 2001/02. That followed falls in both 2000/01 and 2001/02.
- Around 400 local authority dwellings were completed in the UK in $2002 / 03$, more than in 2001/02, but still well below the 16,600 recorded in 1990/91.
- Dwellings completed by registered social landlords have halved since the peak of over 38,000 in 1995/96.
- The number of private dwellings built in the UK has fluctuated, with no clear trend established. However, the total of 164,000 in 2002/03 was the highest in the period shown.

## Permanent dwellings completed in 2002/03 by region

Annual \% change in dwellings completed
UK, 1991/92-2002/03

## House prices

- The average property price in the UK increased from $£ 121,000$ to $£ 140,000$ in the year to 2003 Q4, a 15 percent increase
- House price inflation fell in all four quarters of 2003, having risen in eight successive quarters from 2001 Q1.
- There was considerable regional variation: prices in the North rose by 34 percent, compared to 6 percent in the South East.
- The average house price in London is 66 percent above the UK average, while in Scotland it is 40 percent below.
- The simple house price to borrower's income ratio has reached its highest point over the period shown, surpassing the previous 1973 peak.
- The Halifax House Price Index is one of several measures of house prices. Alternatives include those from HM Land Registry, the ODPM, Nationwide and the Royal Institute of Chartered Surveyors.

## Homelessness

- Around 125,000 households were accepted as homeless and in priority need in 2002. This is an increase of 5 percent on the previous year and an increase of over 20 percent on the 1997 figure.
- In the 2003 Q3, 71 percent of acceptances where from households classified as White, 10 percent from African/Caribbean households, 6 percent from Indian/Pakistani/Bangladeshi households, 7 percent from other ethnic origin households and the remaining 6 percent from households where the ethnic origin was not known. This pattern is consistent with previous quarters
- In 2003 Q1, 38 percent of acceptances arose because parents, relatives or friends were no longer able, or willing, to accommodate them. 20 percent were due to the breakdown of a relationship with a partner, while 12 percent were due to households losing accommodation through the ending of an assured shorthold. 1 per cent resulted from mortgage arrears, compared to a peak of 12 percent during 1991.

## Rough sleeping

- The number of people sleeping rough in England has fallen by two-thirds over the last four years, according to count figures released by the Rough Sleepers Unit.
- It is estimated that there are around 500 people sleeping rough in England compared to 1,850 in 1998.
- Around 25 percent of rough sleepers are aged between 18 and 25 . 6 percent are over 60.9 out of every 10 rough sleepers are male.
- Some $30-50$ percent of rough sleepers suffer from mental health problems. The great majority ( 88 percent) of those with mental health problems became ill before they were homeless.
- As many as 50 percent of rough sleepers have a serious alcohol problem and one in five misuse drugs.

## Local government finance

- 2003/04 saw the introduction of the new Formula Grant Distribution (FGD) system of support for local government finance in England. The latest figures are not comparable with Standard Spending Assessment (SSA) figures. The Library has produced briefs on this change in system.
- The overall SSA for England has increased above the rate of inflation in each of the last 5 years. Overall, FSS rose 2.3\% between 2003/04 and 2004/05.
- Changes in SSA/FSS are measured against adjusted figures for the previous year.
- When council tax was introduced in 1993/94 it financed 15 percent of local government expenditure. This had risen to 20 percent by 2001/02 and has stabilised at this level since. The majority of local government expenditure is financed through central government.

## Council tax

- To compare year-on-year increases, council taxes are expressed in terms of the average Band D council tax for a 2 adult dwelling. This ensures a like-for-like comparison is being made as the mix of dwellings by value will differ from one authority to another.
- The average Band D council tax in the North East $(£ 1,161)$ is higher than in any other Government Office Region, while London has the lowest rate ( $£ 1,058$ ).
- Newark \& Sherwood and Sedgefield local authorities had the highest level of average Band D council tax $(£ 1,294)$ in Great Britain.
- Westminster and Wandsworth local authorities have the lowest levels of Band D council tax ( $£ 570$ and $£ 584$ respectively).
- The average council tax per dwelling in England is $£ 908$ in 2003/04, significantly less than the average for a Band D dwelling.

## Population

- Steady growth in the population over the last 100 years was interrupted by a period when the population was relatively static during the 1970s and 1980s. Since then growth has resumed and the UK's population is projected to grow from 59 million today to 63 million in 25 years time.
- While the projected population of Wales and Northern Ireland is little changed, in Scotland there is a decline. The UK-wide growth is due to the very different trend projected for England.
- In 19511.8 million people were aged 75 and over, 4 percent of the population. Today the figure is 4.4 million, 8 percent.
- In future years the number of elderly people is projected to rise - this is largely due to rises in the numbers in the oldest age groups, which has particular implications for social and health care provision. The number aged $80+$ in the UK is currently around $21 / 2$ million. This is projected to be just under $41 / 2$ million by 2031.

## Infant deaths and life expectancy

- Life expectancy at birth has increased by around 28 years for both men and women over the last 100 years. The latest data suggest a man born today can expect to reach 75 years and a woman 80 years.
- Of the constituent countries in the UK, England has the highest life expectancy ( 75.5 males, 80.3 females) and Scotland the lowest ( 72.9 males, 78.2 females).
- The UK ranks $5^{\text {th }}$ and $12^{\text {th }}$ in the EU in terms of male and female life expectancy at birth respectively.
- The infant death rate has fallen from over 100 for every 1,000 births to around 5 per 1,000 . The rate for the UK, however, is high relative to other EU15 countries. Only Greece has a higher rate.

## International migration

- In 2001, 172,000 more people migrated to the UK than emigrated from it. This was a record net inflow.
- Historically, more people have tended to emigrate from the UK than migrate into the UK. Since the mid-1980s, however, this trend has been reversed and there has been a consistent gain in the population from net immigration.
- The UK had 86,500 immigrants from the EU in 2001, 18 percent of the total. However, emigration to the EU totalled 93,600. Net immigration from Bangladesh, India and Sri Lanka was 32,300 .
- London was the destination for $42 \%$ of all immigrants to the UK in 2001. There was a net inflow of 104,000 immigrants to London during 2001.

## Asylum seekers

- In 2003, there were 49,370 principal applications for asylum (i.e. excluding dependants), 41 percent less than in 2002. 72 percent applied in country, with 28 percent applying in port.
- The 23,385 applications in Q4 2002 and the 8,900 in October 2002 are the highest quarterly and monthly totals recorded.
- The backlog of applications waiting to be determined fell to 24,500 by December 2003, down by 40 percent compared with the previous year
- The top five applicant nationalities in 2003 were Somalia ( 10 percent), Iraq ( 8 percent), China ( 7 percent), Zimbabwe ( 7 percent) and Iran ( 6 percent).
- UNHCR data show the UK had the second highest number of asylum applications, including dependants, of EU countries in 2003; France had the highest number of applications. However, in terms of asylum applications per 1,000 inhabitants, the UK ranks ninth.

Next update: July 2004

## Asylum decisions

- 64,605 initial asylum decisions were made in 2003, 22 percent fewer than in 2002 , and considerably more than the number of applications $(49,370)$
- 3,880 principal applicants were granted asylum, 6 percent of the total. A further 7,210 people were granted discretionary, exceptional or humanitarian leave to remain (ELR).
- Of those granted asylum in 2002, 43 percent were from Somalia, 22 percent were from Zimbabwe and 3 percent were from Sudan.
- Data for 2002 suggests that the Home Office's Public Service Agreement target of reaching and serving initial decisions on 65 percent of applications within two months was met in 2002/03.
- The Home Office received 81,725 asylum appeals in 2003, a rise of 27 percent relative to 2002. Of the 81,725 cases determined by the Immigration Appellate Authority in 2002, 16,070 (20 percent) were allowed.

## Social security benefits and expenditure

- Spending on social security accounts for just under 30 percent of all public expenditure and is equivalent to 11 percent of GDP. Cyclical peaks and troughs aside, it has grown steadily over the past 50 years.
- The make-up of benefit expenditure has changed over this period. Contributory benefits now account for less than 50 percent of total benefit expenditure, compared to 70 percent in the 1960s and 1970s.
- Income-related benefits have grown from 8 percent of benefit expenditure to 29 percent.
- Other 'categorical' benefits have also grown in importance since the 1970s, with the introduction of universal child benefit and benefits to help with the extra costs of disability and care needs.
- There are around 12 million people receiving a retirement pension. Those over working age account for 29 percent total benefit spending.

## Pensions and pensioners' incomes

- As a whole pensioners' incomes have grown by around 80 percent in real terms over the past two decades.
- Growth has been seen in each part of the income distribution, although it has been greater (around 90 percent) at the top of the income distribution than at the bottom (around 45 percent).
- The explanation for differential growth lies largely in different sources of income. The poorest pensioners are overwhelmingly dependent on state benefits for their income, while richer pensioners getting a growing proportion, usually the majority, of their income from occupational pensions and other private sources.
- While the real value of the basic state pension has grown in recent years, it has been falling in relation to average earnings. By April 2003 the basic pension for a single person was 16 percent of average earnings, compared with 25 percent in 1980.

## Road accident casualties

- There has been little change in overall annual road accident casualty numbers over the past 20 years. However, the proportion killed or seriously injured has tended to fall.
- There were 3,431 road deaths in Great Britain in 2002, down from all-time and post-war peaks of 9,169 and 7,985 in 1941 and 1966 respectively.
- Child casualties fell by 9 per cent in 2002 compared with 2001 . There were 179 child fatalities, 18 per cent less than in 2001. The number of children killed or seriously injured in 2002 was 4,596 , down 8 per cent on 2001
- 775 pedestrians were killed in Great Britain in 2002, 23 per cent below the 1994-1998 baseline average.
- It is estimated that 14 percent of road deaths and 6 percent of all road accident casualties in 2002 involved illegal alcohol levels.

Road deaths per 100,000 population, 2001

## Road traffic

- Road vehicle traffic has increased in all but three of the last 50 years. Total distance travelled in Great Britain was over nine times higher in 2002 than in 1950.
- The biggest growth in traffic in recent years came in the late 1980s. Between 1985 and 1989 road traffic grew by one third.
- The stock of motor vehicles in Great Britain currently stands at just over 30 million, of which 26 million are body type cars. There were 13 percent more cars licensed in 2002 than in 1997.
- 74 percent of all households have access to a car. 27 percent have two or more cars.

## Public transport

- Transport by cars, vans and taxis constituted 85 percent of the total distance travelled by passengers in 2002. In 1952 such transport accounted for just over one-quarter of the total distance travelled.
- Buses and coaches accounted for 6 percent of the total distance travelled by passengers in 2002. This compares to 42 percent in the early 1950s.
- Rail travel is at an historically high level but the rapid growth in private road transport means that rail travel now accounts for 6 percent of all passenger transport, compared with 17 percent in the early 1950s.
- There were 942 million passenger journeys on the London Underground in 2002/03, fewer than in 2001/02 but 15 percent more than in 1997/98. There were a total of 976 million national rail journeys in 2002/03.

## Passenger transport by selected mode, Great Britain

Billion passenger kilometres/percentage of total

## Rail performance and fares

- The Public Performance Measure (PPM) was introduced by the Strategic Rail Authority as the main measure of performance in 2000. The PPM measures the performance of individual trains against their planned timetable, combining reliability and punctuality.
- Speed restrictions imposed after the Hatfield derailment in October 2000 caused a significant reduction PPM. The measure fell below 50 percent from October to December 2000 for long distance operators.
- There were 92 passenger complaints per 100,000 journeys in the first quarter of 2003/04, a 17.9 per cent year-on-year decrease.
- Rail fares have increased by 20 per cent since 1997, a 4 per cent increase in real terms. First class prices have risen at a rate well above the average.

## Freight

- Freight data are presented in two standard forms:

Goods lifted: the weight of goods carried
Goods moved: the weight multiplied by the distance travelled

- Road freight accounts for over 80 percent of goods lifted and over 60 percent of goods moved. There has been little change in these relative shares in recent years.
- Distances carried have increased rapidly, particularly in terms of rail freight. The average rail haul in 2002 was just over 200 km , almost double the average distance in 1991.
- Two discontinuities in the rail series in recent years, following privatisation and methodological changes, make assessing trends difficult.

## Freight by mode of transport: Great Britain

Shares of total

|  | Road |  | Rail |  | Water |  | Pipeline |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Internet access

- An estimated 11.9 million UK households had access to the internet in the quarter ending September 2003, 48 percent of the total.
- Access has increased by over 400 percent in five years.
- There is considerable variation in usage by age and region.
- 12 percent of households in the poorest income decile have home access to the internet, compared to 86 percent of households in the highest income decile.
- The most popular online purchase category is travel, accommodation or holidays, followed by books, magazines, e -learning or training material and tickets for events.

| Households with home access to the internet <br> Provisional percentages, 2002/03 |  |

## Index of multiple deprivation

- The Index of Multiple Deprivation 2000 (IMD 2000) ranks all 8,414 wards in England by relative deprivation. Similar indices are available for Scotland, Wales and Northern Ireland. However, they are not directly comparable.
- The IMD 2000 is used to guide various areas of policy, including stamp duty exemption, the Deprived Urban Post Office Fund and the Neighbourhood Renewal Fund.
- The index is formed by combining income, employment, health, education, housing and access to services domains.
- Six different local authority level aggregations are available. However, the index is not available at constituency level.
- The index is currently being updated, a process now due to be completed this winter.
- Extensive information is available in House of Commons Library Standard Note SN/SG/2142 with supplementary tables in SN/SG/2143.
