## 1. Introduction and methodology

## Introduction

The Scottish Government wants all of Scotland's children and young people to have the skills and capacities to take full advantage of the opportunities they have in life and work, whatever their starting point or ambitions. This is outlined clearly in the Raising Attainment for All ${ }^{1}$ programme, launched in June 2014. The programme articulates a strong shared commitment to raising attainment for all and closing the attainment gap between children and young people who are most and least advantaged. This commitment to improvement and equity in attainment has a firm foundation in all of Scottish Government's key policies and programmes which affect children and young people including Curriculum for Excellence, Putting Learners at the Centre and Developing the Young Workforce.

Currently, around 66\% of learners who enrol on full-time further education (FE) programmes and $71 \%$ of learners who enrol on full-time higher education (HE) programmes, complete their programme successfully. A further 11\% of learners on full-time FE programmes and 13\% of learners on full-time HE programmes complete with partial success. The profile of the group of learners who complete with partial success is not fully understood, nor are the reasons behind them completing with partial success. This report explores these issues, evaluates current practice, and identifies important areas for discussion and further development amongst practitioners. It identifies excellent practice found by inspectors and sets out recommendations for improvement.

In preparing this report, inspectors visited a carefully selected sample of four colleges and drew on the findings of published Education Scotland reviews of colleges and other relevant publications and reports.

Education Scotland's publication, External quality arrangements for Scotland's colleges, August 2013, ${ }^{2}$ specifies that Education Scotland will produce a number of thematic aspect reports each year. This report is one of a suite of reports by Education Scotland commissioned by the Scottish Funding Council (SFC) to evaluate provision in colleges for supporting learner success. Colleges should act on the recommendations contained in these reports. College inspectors will monitor action towards implementation of these recommendations as part of their normal dialogue with colleges and will wish to discuss issues arising from thematic aspect reports during annual engagement visits.

## Methodology

Each college in the sample was visited once during the fieldwork. During the visits inspectors discussed issues with managers, teaching staff and learners. They also held discussions with relevant stakeholders, including a professional dialogue with college regional leads who are members of the national Care Strategic Steering

[^0]group. The four colleges visited during the fieldwork for this report are listed in Appendix 1 of this report.

Inspectors undertook desk analysis of relevant documents. This included a review of college performance indicators (PI), programme information and other external reports. In addition to the evidence obtained from the four colleges involved in the fieldwork, reviewers also examined the evaluations contained in annual engagement visit reports for 2013-14 and in college external review reports published between January 2014 and June 2015.

## 2. Summary of key findings

## Strengths

- Overall, learner success has improved in the college sector in recent years, across all modes of delivery. The rates of learners completing with partial success has remained fairly steady over the same period but varies slightly by level of programme and mode of delivery.
- Senior managers place significant importance on learners achieving successfully and most colleges have appropriate polices and arrangements to support this.
- Most colleges provide appropriate targeted support to learners who are identified as more likely to complete with partial success. Learners receive good support from a range of college services which help them deal with issues which might impact on their learning. These include: financial difficulties; social and emotional issues; and conflicting commitments, such as employment or caring for others.
- Most programme teams have good knowledge of their learners and the issues that impact on their success. This includes identifying key units which they often do not complete that contribute to partial success outcomes.
- Most colleges have appropriate arrangements to monitor attendance and identify at-risk learners, particularly those on full-time FE programmes.
- Most colleges have well-developed self-evaluation processes that take good account of a range of factors which impact on learner success. Some colleges have introduced programme risk assessments to identify learners at risk of withdrawing or completing with partial success.

## Areas for development

- Higher rates of learners on part-time programmes, particularly those undertaking part-time FE level provision, complete programmes with partial success.
- Too many learners who complete programmes with partial success achieve no units at all.
- Around $20 \%$ of learners who complete with partial success, miss gaining their award by one or two units.
- Curriculum areas with awards which routinely involve external examinations are more likely to have higher levels of learners who complete with partial success.
- Although most colleges have helpful systems to track and monitor the progress of learners, staff do not always use them consistently to identify and support learners who are just short of achieving the full award.
- Most colleges do not focus sufficiently on using partial success data as part of self-evaluation activities.

## 3. Background and context

## Raising attainment - a strategic priority

A key Scottish Government priority is to improve educational outcomes in Scotland's most disadvantaged communities to help narrow the attainment gap. Raising Attainment for All, and more recently the Scottish Attainment Challenge ${ }^{3}$ emphasises Scottish Government's determination to address this issue. Targeted interventions in the seven local authorities with the highest concentration of primary-age children from households in deprived areas, will work to develop clear, bespoke improvement plans and funded-initiatives. Although this focus is on younger learners, the hope is that by reducing the attainment gap when children are young, the benefits will continue into secondary school and beyond.

In recent years, the college sector in Scotland has undergone significant change to respond to Scottish Government policies and priorities. Putting Learners at the Centre: Delivering our Ambitions for Post-16 Education (2011) ${ }^{4}$ outlined a number of reforms to support the ambition for all young people to have a place in Post-16 education or training. More recently, the report of the Commission for Developing Scotland's Young Workforce, Education working for all! (2014) ${ }^{5}$ and Scottish Government's response Developing the Young Workforce, Scotland's Youth Employment Strategy (2014) ${ }^{6}$, articulate further the role the college sector will play in realising these goals.

Learner completion and success rates in colleges have improved over the last few years. In 2008-09, 72\% of learners who enrolled on full-time FE programmes completed them, with $59 \%$ of learners completing successfully. By 2013-14, learner completion rates had improved to $77 \%$, with $66 \%$ completing successfully. Over the same time period there was a similar pattern of improvement for learners enrolled on full-time HE programmes. In 2008-09, $77 \%$ of learners on full-time HE programmes completed their programmes, with 62\% completing successfully. In 2013-14, this improved further with $84 \%$ of learners completing and $71 \%$ completing successfully.

## Defining learners completing with partial success

Colleges work with an extensive range of data sets. Data returns submitted to SFC include Further Education Statistics (FES) returns from which SFC generates sector statistics on learner withdrawal, success and progression. Colleges are given a range of 14 different FES code options by which to categorise the result for each learner enrolled on a programme. A learner can be classified as completing with partial success by assigning one of two codes:

Code 07 - completed programme, learner assessed but not successful.
Code 17 - learner has progressed to the next year but did not gain 70\% of the credits undertaken.

[^1]For a learner to be categorised as successful, they must complete the group award associated with the programme, such as a Higher National Certificate (HNC). On locally-devised programmes, comprising of a number of National Certificate (NC) units, learners must complete at least $70 \%$ of the assessed units associated with the programme. Learners who fail to complete a group award or fail to achieve $70 \%$ of the credits associated with locally-devised programme would be assigned code 07.

In some instances, learners who do not gain 70\% of the credits undertaken on a programme are allowed to progress to the next year of a programme. This could include, for example, progression from a programme at Scottish Credit and Qualifications Framework (SCQF) level 5 to a SCQF level 6 programme, or from year 1 to year 2 of a Higher National Diploma (HND). These learners would be assigned a FES code 17.

In 2013-14, 22,310 learners who completed a programme were not successful. A further 1,346 learners who progressed to the next year of a programme did not gain $70 \%$ of the credits undertaken. Together this accounts for around $12 \%$ of total enrolments.

## Reporting on partial success

SFC publishes annually a set of performance indicators (PI) ${ }^{7}$ to inform stakeholders about the performance of the sector. The reported PIs help colleges to evaluate their own performance over time and against similar colleges. Colleges also draw on PI data to benchmark and set targets for improvement at programme, departmental and college level. A suite of four PIs are used to provide an overall picture of how a college is performing. These are:

- \% early withdrawal;
- \% further withdrawal;
- \% completed successfully; and
- \% completed with partial success.

The four PIs can be presented and broken down by various factors, including by: subject group; duration of study; age group: datazone; and protected characteristics.

The national figures give a helpful overview of sector performance and provide a useful backdrop for individual colleges to benchmark their own performance against other colleges and sector norms. PIs are of most use if they are interpreted in the local context within which a college operates. Usually a number of factors impact on a PI and it is only when underlying factors and influences are explored fully that an accurate understanding of what contributes to performance can be understood. For example, a high further withdrawal rate may be influenced by a negative factor such as poor quality learner support, or a positive factor, like a buoyant local economy where learners are leaving to take up employment as a result of positive work-placements.

[^2]The PI which refers to completed with partial success gives an indication of what has been achieved by learners who complete their programme but do not gain the full award. It does not reflect the full extent of the learning, achievement and attainment that has taken place. For example, it does not recognise:

- additional achievements and successes outside conventional measures, for example, progress against personal learning goals;
- the extent of partial attainment, or differentiate that attainment; and
- the extent to which essential skills are developed, particularly soft skills.

The completed with partial success category does not offer sufficient differentiation to understand how much of a programme a learner has achieved in comparison to the full award. Some learners may have achieved no units whereas others may be one unit short of the full award. SFC have started to produce profiles for partial success which provide greater differentiation. Level of achievement is broken down into five categories, each one giving the \% of learners completing their course:

- without gaining any units;
- achieving up to $25 \%$ of planned units;
- achieving 25-49\% of planned units;
- achieving 50-74\% of planned units; and
- achieving at least 75\% of planned units.

The introduction of five categories provides useful granularity. Of most interest are the learners who are at opposite ends of the achievement spectrum. For example, learners who complete their programme without gaining any units, and those who fail to achieve the full award by one or two units. These profiles are discussed in greater detail in section 4, using FES data from 2013-14.

In addition to units successfully attained by learners completing with partial success, almost all learners will have developed and gained a range of wider essential skills that prepare them better for employment and social interaction. The Scottish Government's documents, Skills for Scotland: a Lifelong Skills Strategy (2007) ${ }^{8}$ and Skills for Scotland: Accelerating the Recovery and Increasing Sustainable Economic Growth (2010) ${ }^{9}$, define skills by focusing primarily on several overlapping clusters of skills. These are:

- personal and learning skills, that enable individuals to become effective lifelong learners;
- literacy and numeracy;
- the five core skills of communication, numeracy, information technology, problem solving and working with others;
- employability skills that prepare individuals for employment rather than a specific occupation;
- essential skills that include all of the above; and
- vocational skills that are specific to a particular occupation or sector.

[^3]The strategy documents also identify softer skills, which employers value as vital to the success of their organisations. These include:

- effective time management;
- the ability to plan and organise;
- effective written and oral communication skills;
- the ability to solve problems;
- being able to undertake tasks or make submissions at short notice;
- the ability to work with others to achieve common goals;
- the ability to think critically and creatively;
- the ability to learn and to continue learning;
- the ability to take responsibility for professional development; and
- having the skills to manage or be managed by others.

The acquisition of these softer skills chime with comments in the Commission for Developing Scotland's Young Force report. The report encourages greater emphasis on employer engagement in education and training to better prepare young people with the skills, knowledge and attitudes that employers are looking for.

## Factors impacting on partial success

A range of factors may contribute to the reason for learners completing programmes of study but not successfully gaining the award. Previous Education Scotland reports have examined the reasons why some learners fail to complete successfully and identify the conditions that promote success. Maximising learner success in Scotland's colleges $(2014)^{10}$, reported learner success has improved steadily over a four-year period and that a reduction in learner withdrawals had been the most significant factor in bringing about improvement. However, the report noted several areas for development:

- colleges are not fully and effectively addressing the support needs of younger full-time learners and those from the most deprived areas;
- many colleges fail to identify at an early stage the risk factors, particularly those associated with multi-deprivation, that may predispose learners to withdraw from college; and
- most colleges make limited use of attendance patterns in identifying and supporting learners who may be at risk of failing to achieve.

Supporting learners to succeed (2014) ${ }^{11}$, reported on the actions taken by colleges to help learners resolve issues which are affecting their ability to turn up for classes, engage fully in learning and undertake assessments successfully. The report noted a number of areas of positive practice, including:

- generally, staff who are directly involved in contributing to the support of learners are committed, conscientious, and work hard to support learners to stay on their programme of study; and

[^4]- college staff responsible for coordinating additional support arrangements take good account of learner needs to enable individual learners and class groups to access support that is responsive and unobtrusive.

However, it noted several areas for development, including:

- a few college management teams are not taking sufficient account of the external factors which may impact negatively on learner success rates when planning services to support learning; and
- a few colleges do not have sufficiently systematic arrangements with local authorities and, or schools to ensure college staff receive routinely, advance information about the support needs of individual pupils.

These and other factors explored during fieldwork visits are discussed more fully in section 5.

## 4. Patterns and trends in partial success

## Sector trends in success and partial success

The rates of learners completing successfully or completing with partial success are invariably linked as they are both sub-sets of the group of learners who complete programmes. It is often more helpful to consider both figures together as this gives a broader overview of learner success. Improvements in early withdrawal and further withdrawal rates impact on both successful and partial success rates, as they are calculated on day one enrolment figures.

Overall, learner success rates have improved in the college sector in recent years across all modes of delivery. The data in table 1 (Appendix 2 ) shows the proportions of learners who have completed programmes successfully or with partial success over the last four years, by programme level and mode of delivery.

Over a four-year period from 2010-11 to 2013-14, success rates for learners on full-time programmes increased. On full-time FE programmes successful completion rates increased from $62 \%$ to $66 \%$ whilst rates for completed with partial success remained fairly stable at $11 \%$. For learners on full-time HE programmes the level of learners completing successfully increased from $67 \%$ to $71 \%$, whilst the rates of learners completing with partial success fluctuated between $12 \%$ and $13 \%$.

During the same timescale, the level of learners on part-time FE programmes completing successfully remained at 78\%, although it fluctuated up and down during the period. Learners completing with partial success fluctuated between $12 \%$ and $13 \%$. On part-time HE programmes, the level of learners completing successfully increased from $75 \%$ to $78 \%$, whilst the level of those completing with partial success remained steady at 14\%.

## Distribution of partial success

## Mode of delivery / level of programme

The partial success profile outlined in section 3 provides a better insight into the number of learners who complete their programmes with varying levels of unit attainment. The data in table 2 (Appendix 2) shows the distribution of partial success for learners completing their programme during the period 2010-11 to 2013-14, by programme level and mode of delivery. To give a sense of scale, in 2013-14, a total of 23,656 learners completed their programmes with partial success. The following chart (Chart 1) gives a further breakdown by mode of delivery and level of programme.

Chart 1

The highest number of learners who complete with partial success study on part-time FE programmes. This category includes learners who are studying shorter programmes, such as a single unit or a number of units short of a full award. The distribution of partial success varies to some extent by programme level and mode of delivery (see Chart 2). Around half of learners on full-time programmes who complete with partial success, gain $50 \%$ or more of the units they set out to achieve. For learners on full-time FE programmes, this is closer to 60\%. Less than half of learners on part-time programmes who complete with partial success, gain 50\% or more of the units they set out to achieve. For learners on part-time FE programmes, this is around $32 \%$.

Chart 2

More significant is the difference between the percentages of learners who complete with partial success and achieve no units when compared by mode of delivery (Chart
3). For learners on full-time programmes, this is around 4-5\%. This compares to over $50 \%$ for learners on part-time FE programmes and around $40 \%$ for learners on part-time HE programmes. Variance between colleges is also considerable. For example, in 2013-14, for learners completing with partial success and gaining no units on part-time FE programmes, the national performance level was $52 \%$, with a range between $21 \%$ and $81 \%$.

Chart 3

## Subject area

The data in tables 3-6 (Appendix 2) show the distribution of partial success for learners completing their programme during the period 2010-11 to 2013-14 by subject area, programme level and mode of delivery.

There is considerable variation in learner success and partial success rates across the 18 subject areas used by Education Scotland and SFC to group curriculum areas. Nautical studies routinely records the highest rates of learner success across all programme levels and modes of delivery. Correspondingly, the lowest rates of partial success are also recorded in nautical studies. In full-time FE programmes, science and social science programmes routinely have the highest levels of partial success, around $18 \%$. In full-time HE programme, engineering programmes have the highest levels of partial success, around 19\%. In part-time FE programmes, media and social science programmes have the highest levels of partial success, around $20 \%$. In part-time HE programmes, there appears to be more variation between subject areas, although computing and science programmes are often in the highest category.

Curriculum areas that deliver awards which involve external examination, such as Higher qualifications, are more likely to have greater levels of learners who complete with partial success. Many of these awards are incorporated within a wider curriculum in a range of subject areas, including media (English and
communications), science and social sciences. This may be a contributory factor to the higher levels of partial success in these subject areas.

The data in tables 3-6 may be helpful for colleges during self-evaluation activities to benchmark their own data and partial success profiles against sector levels and other curriculum areas.

## Protected Characteristics

The distribution of partial success rates for the three protected characteristics of gender, disability and ethnicity are outlined below. A very detailed analysis of learner statistics in Scottish colleges is contained within the 2014 annual statistical report ${ }^{12}$ of the Equality Challenge Unit. This very useful report contains a full analysis of participation and success rates, including partial success rates, for college learners. The report contains detailed analysis of the data by age, disability, ethnicity and gender against the following categories:

- level of study;
- FE subject areas;
- HE subject areas;
- mode of study;
- retention and completion outcome; and
- geographical region (within Scotland).

The report also considers learners' socioeconomic class, based on the Scottish Index of Multiple Deprivation (SIMD). In addition, a helpful section on multiple identities examines the interplay of different identities, such as age and disability, and disability and ethnicity.

For each of the protected characteristics outlined below, there appears to be little difference that gender, disability or ethnicity makes to rates of partial success for learners overall (all around 12\%). However, for each characteristic there are differences of between 5 and 10 percentage points between categories for learners who achieve no units. It is not possible, within the scope of the current report, to identify why gender, disability or ethnicity would have a direct bearing on this. It is likely to be influenced by a number of factors or issues and this would require more detailed field work and analysis.

## Gender

The data in table 7 (Appendix 2) shows the distribution of partial success rates for learners completing their programme by gender for the academic year 2013-14. Partial success rates are the same for males and females, at $12 \%$. There is a difference between the percentage of learners who complete with partial success and achieve no units, when compared by gender. Higher levels of females (36\%) achieve no units compared with males (26\%). This may be partly due to subject

[^5]choices which attract higher numbers of a particular gender and have higher levels of partial success, such as social sciences.

## Disability

The data in table 8 (Appendix 2) shows the distribution of partial success rates for learners completing their programme by disability for the academic year 2013-14. Partial success rates for learners declaring a disability was 13\% compared to 12\% for learners who did not declare a disability. Higher levels of learners who do not declare a disability (32\%) achieve no units compared with learners who declare a disability (27\%).

## Ethnicity

The data in table 9 (Appendix 2) shows the distribution of partial success rates for learners completing their programme by ethnicity categories for the academic year 2013-14. Ethnicity categories have been aggregated into the following groups:

- white total, to include UK white, white Irish and white Gypsy/traveller;
- black and minority ethnic (BME) total, to include Asian, black, mixed and other background; and
- information refused or not known.

Partial success rates are the same (12\%) for both white and BME categories. Higher levels of BME learners (35\%) achieve no units compared with white learners (30\%).

## SIMD

The data in tables 10 (Appendix 2) shows the distribution of partial success rates for learners completing their programme by SIMD decile, for the academic year 2013-14. Partial success rates are higher for learners in the 20\% most deprived areas compared with those living in the least deprived. The Maximising learner success in Scotland's colleges report stated:

Deprivation is a significant factor in learner success. Living in the 20\% most deprived SIMD bands has a significant negative impact on learner success. Success rates are consistently higher for learners living in the 80\% least deprived areas, compared to those learners living in the $20 \%$ most deprived. Although success rates have increased year-on-year from 2009-10 to 2012-13 for learners in both these categories, success rates for learners in the 20\% most deprived areas remain around seven percentage points lower. Over the four years, success rates for learners living in the most deprived areas have remained around ten percentage points lower than those living in the least deprived areas.

## Care - a case study

As part of the fieldwork, inspectors held a discussion with the college regional leads for the Care Strategic Steering group. The meeting provided an opportunity to explore issues around partial success in the context of a curriculum area. It also provided an opportunity to explore the usefulness of using data to benchmark learner performance in the care sector and how it might inform self-evaluation activities. The group considered a number of sets of data for the academic year 2013-14, shown in Appendix 3 (tables 11-14).

Table 11, containing the standard suite of four Pls, by level and mode of delivery, for both care and all subject programmes, gives a helpful overview, particularly for noting early and further withdrawal comparisons. Table 12, containing the distribution of partial success profile, by level and mode of delivery, for both care and all subject programmes, allows a more detailed examination and benchmarking. Tables 13a and 13b, containing successful and partial success levels by level, mode of delivery and gender for both care and all subjects, gives some interesting comparisons, particularly in relation to male learners. Tables 14a and 14b, containing partial success profiles for learners on full-time FE and HE programmes at several different colleges, allows benchmarking and examination of why differences may exist.

The group used the data sets constructively to inform discussions around partial success for learners on care programmes. Work placements were seen as an important contributory factor to learners completing full-time programmes but only achieving partial success. Many care programmes contain work placements and can account for up to five credits within an award. Learners failing to complete any work placement element would be unable to achieve successfully and would fall into the category of achieving with partial success. The group also identified the issue of unit integration as a possible factor contributing to partial success. The current HNC Social Care contains three Scottish Vocational Qualification (SVQ) units which present many opportunities for integration within the remaining nine academic units, particularly the graded unit. The risk is that learners could potentially fail the graded unit, and due to integration of assessments this could impact on success in other units. Approaches to SVQ assessments were discussed by the group. Learners are assessed for SVQ competences when they have developed the necessary skills. If a learner has not had the opportunity within the workplace to develop the competence, this can delay the assessment and result in the learner completing with partial success. This may be a particular issue for learners on part-time programmes. The group recognised the pattern of female learners having greater success than male learners on care programmes, particularly in full-time provision, but were unable to agree why that might be the case. Partial success rate profiles for individual colleges were discussed with interest. Most discussion focussed on what factors might be causing the difference, particularly for those learners achieving no units.

Overall, the group found the data sets a helpful aid to inform discussions around learner success and what the factors are generally and specifically to care programmes, that cause learners not to achieve their full awards.

## 5. College approaches and practices

## College approaches and practices

Colleges apply a number of measures and arrangements to maximise the chances of learners to complete their programme successfully. These measures include providing learners with appropriate advice and support at different stages of their studies. In addition, most college quality assurance and improvement activities monitor the performance of programmes to identify and improve these where issues are identified. Many of the measures and arrangements implemented are intended to address factors that contribute to learners leaving a programme before it finishes, resulting in improved early and further withdrawal rates. Other measures focus on ensuring learners who complete programmes, do so successfully, resulting in improved successful completion rates. These measures, reflecting different stages of the learner journey, were discussed in the Maximising learner success in Scotland's colleges report. They corresponded to:

- helping learners find the right programme;
- providing effective guidance and support;
- improving learning and teaching;
- help in preparing learners to move on; and
- reviewing and evaluating performance.

Understandably, colleges place greatest emphasis on learners completing successfully. As a result, most colleges do not place sufficient emphasis examining and understanding fully those learners who complete with partial success.

## Leadership and direction

Senior managers place significant importance on learners achieving successfully and view it as a high priority. Most colleges have appropriate policies, procedures and practices that highlight and promote the importance of learner success. Often these are embedded within wider policy and practice contexts, such as learning and teaching or learner support. A few colleges have specific policies and strategies for improving attainment overall. College-wide approaches to attendance, assessment and monitoring learner progress, can all contribute significantly to learners remaining on a programme and completing it successfully.

All regional outcome agreements (ROA) now contain targets for learners completing successfully, albeit at a global level. In multi-college regions, individual colleges contribute to the overall regional target. Most senior managers have a good comprehension of the ROA targets and how well their college is performing in relation to the regional target. However, ROAs give no recognition to the achievement of learners who complete programmes with partial success, particularly where learners progress to a positive destination, such as employment.

In recently-merged colleges, issues can be more complex for managers to address immediately. In some instances, low performing programmes from legacy institutions are identified by managers as a significant reason for low attainment. This results in higher numbers of learners in these programmes completing with
partial success. Generally, managers have a clear understanding of the issues that have contributed to low attainment rates and higher levels of partial success. For example, where managers from legacy colleges left their post during the academic year, new staffing structures were not always in place sufficiently quickly. In some instances this led to curriculum teams not having sufficient focus on ensuring all learners completed assessments which resulted in higher levels of partial success. The completion of new staffing structures should help to address these issues and improve success rates.

## Contributing factors

The fieldwork for the current report confirmed many of the findings in Maximising learner success in Scotland's colleges. It also allowed a more detailed examination of some of the factors that may contribute specifically to learners completing programmes with partial success. The factors identified are:

- attendance and absenteeism;
- programme design and delivery;
- target-setting and progress monitoring;
- progression to other programmes; and
- self-evaluation activities.

## Attendance and absenteeism

Most colleges cite low levels of learner attendance as a significant factor resulting in partial success, with close correlation between attendance-levels and partial success rates. Poor or erratic attendance patterns are often an early indicator that learners are at risk of completing only some of their programme units. All colleges have clear guidelines relating to attendance and absenteeism. Generally, these are adhered to rigorously, particularly for learners on FE programmes where attendance is often linked to bursary or educational maintenance allowance funding. College managers view key factors impacting on learner attendance as: part-time employment; health issues; caring responsibilities; personal circumstances and support needs.

#### Abstract

Absence due to part-time employment working patterns is seen as a growing reason why some learners miss classes. Most college learners rely on part-time employment to supplement any financial support they receive to assist them with their studies. If absences coincide with key periods of their programme, such as final assessments, then this can result in learners not completing individual units successfully. College assessment arrangements usually allow opportunities for learners to re-sit assessments, but often teaching staff find this difficult to organise, particularly towards the end of a teaching block.

Some learners encounter health issues during their period of study and this often impacts on their progress. Where illness or accident causes learners to be absent for an extended time period, all colleges try to make bespoke arrangements to support learners during this period. Learners may be encouraged to continue to learn independently, often supported by material available on college virtual learning environments (VLE). However, if a programme contains significant levels of practical
or workshop elements it may be more difficult for learners to keep up-to-date with their studies.

All colleges are reporting a greater number of learners with mental health-related issues. For some of these learners, periods of anxiety and stress can often result in erratic attendance and extended periods of absence. The report Supporting learners to succeed recorded that "almost all colleges have increased access to counselling facilities to take account of the rise in the number of learners declaring a mental health issue".

Colleges, particularly those with high levels of learners from areas of high deprivation, as defined by SIMD, are reporting an increase in the number of learners who have responsibilities for caring for others. These responsibilities can sometimes impact on attendance patterns if learners miss key periods of their study or miss assessment deadlines. As a consequence, learners may struggle to complete all their assessments, resulting in completing with partial success. More generally, learners receive good support from a range of college services which help them deal with issues which might impact on their learning. These include: financial difficulties; social and emotional issues; and conflicting commitments, such as employment or caring for others.

## Programme design and delivery

During the fieldwork, colleges identified a number of issues associated with the design and delivery of programmes that can impact on learners completing with partial success. These include:

- unit integration and assessment;
- key units; and
- VLE.

An integrated approach to curriculum delivery can be a significant factor in learners achieving with partial success in some subject areas. Integrating units, or outcomes from units, into a single piece of learning, such as a project or a task, is a sound and well-tested approach to learning. It allows an individual or group task to be set which incorporates more holistic learning across a range of skills and competencies. It often makes learning more interesting, more relevant to the employment sector concerned and reduces the overall assessment burden. However, because the piece of integrated learning carries credit for more than one unit, if a learner does not complete the task assessment successfully, it will impact on their progress across a number of units. Staff in one college, noted this as a significant factor within performing arts subjects, where attainment across several credits was tied together in a single performance. This can also put additional pressure on learners, where a number of credits are linked to a piece of work towards the end of a programme.

College staff identify key units within their programmes that often contribute to learners completing with partial success. These may be specific units within an award that many learners find difficult, or it may be attributed to how a particular unit is delivered. Learners often struggle with external examinations and Higher courses with an external examination component can result in increased levels of partial
success. In some subject areas, examination-based graded units were viewed as having an impact on learner attainment, with greater levels of learner success achieved in project-based graded units. In care programmes, work placement units are core to the award and can account for up to 5 credits. Learners failing to complete a work placement unit would therefore fall into the partial success category. In one college, non-achievement of core skills was contributing to increased levels of partial success. Currently, core skills are embedded within vocational units and delivered by vocational teaching staff. Next year, the college concerned plans to integrate specialist core skills staff into teaching departments to support core skill delivery, to see if it brings about improvement.

Colleges are making increased use of VLEs to support and reinforce learning and this approach allows learners to access subject material outwith the classroom at times which suit their circumstances. It is also particularly useful when learners are absent from class for extended time periods due to accidents or ill-health. This helps reduce the number of learners withdrawing from programmes by increasing flexibility and options for study. However, the use of VLEs by learners is variable, both across colleges and across subject areas in individual colleges.

## Target setting and progress monitoring

All colleges emphasise the importance of effective target-setting and monitoring of learner progress as crucial in supporting learners to complete programmes successfully. In most colleges, particularly within FE programmes, learners meet with an allocated tutor, usually three times a year, to reflect on progress and identify learning goals. Many colleges incorporate this activity into online personal learning plans (PLP) which learners access, consider and modify during their programme of study. Most learners view this support as useful, although learners in a few programmes do not receive or only have periodic access to this support.

The PLP process provides teaching staff with the opportunity to monitor the progress of individual learners systematically and work with learners to identify any issues, such as problem units or attendance patterns. Colleges with a dedicated class or programme tutor, highlight this as being particularly effective in improving learner attendance and aiding the provision of more targeted curriculum and guidance support. One college which has removed personal development planning (PDP) from learners' programmes found that this is impacting negatively upon learner progress monitoring and action planning. The college plans to reintroduce PDP in the new academic year. In one college, recent developments with an on-line tracking and reporting mechanism for the late submission of learner assessments was highlighted as a useful development to allow targeted learner interventions.

Monitoring and tracking the progress that learners make during their studies is an important element of improving attainment. Scottish Government's Raising Attainment programme outlines six approaches, based on practitioners' experience, which help to improve learners' levels of attainment through the use of self-reflection challenge questions. The following approach links appropriately to target-setting and monitoring progress and provides useful challenge questions for teaching staff to consider:

- how well do I track individual learner's progress?
- in what ways do I advise and coach them on their learning, and does each learner understand the progress they are making and need to make?
- what are the sources of information that I use to understand progress?
- am I confident that these are robust, fit-for-purpose, and the best available?

## Progression to other programmes

Many learners who complete programmes progress to further study at the same college or at another institution. Where progression is internal, programme leaders have some discretion around whether a learner can progress to a more advanced programme if they have completed their current programme with partial success. This may be dependent on the particular units that have not been achieved and whether this is likely to impact significantly on the learner's ability to cope with more advanced study. In most colleges, learners who do not complete all of the units in the first year of an HND programme are allowed to progress to the second year on the understanding that they carry the units they did not achieve. Local college assessment arrangements usually outline the conditions attached to this, but routinely learners would be advised to carry no more than 2 or 3 units. For some learners, the additional burden of carrying these additional units can provide further pressure in the following year of study. In one college, senior staff noted that progression within some subject areas was not always dependent upon successful completion within a programme. In some instances, this impacts negatively on learner motivation to fully complete their programme.

Some colleges have introduced formal progression boards where learners' achievements are considered, including their motivation and attitude. These boards take holistic decisions to approve a learner's progression onto a more advanced programme or year two of a programme. Some colleges attach conditions to progression. For example, one college holds a three-day preparatory mathematics summer school programme as a condition of entry onto a HNC Engineering programme. For learners progressing onto other institutions, articulation arrangements with universities are strictly adhered to. This results in no eligibility for learners who complete with partial success to progress onto a university-level programme.

## Self-evaluation activities

Most colleges have well-developed self-evaluation processes, at programme and departmental level, which are used effectively by staff to identify issues and implement actions for improvement. Most college managers have a good understanding of learner data and programme teams analyse Pls routinely to inform self-evaluation activities. However, in only a few colleges do staff focus on partial success data as part of their systematic analysis of learner attainment. Most colleges are not yet using partial success profiles to gain a better understanding of this group of learners and why they do not complete their programme successfully.

In smaller colleges, because of low partial success numbers, college staff usually have very detailed knowledge about what lies behind these figures. The numbers often relate to one or two learners whose personal circumstances affecting their achievement are very well known to college staff.

Greatest emphasis is placed on learner withdrawal rates and completed successful outcome rates. Many programme teams analyse learner success at unit level to identify the units that most learners do not achieve. This allows for targeted support to be offered to learners within individual subject areas and units. For example, in one college provision of additional support for mathematics units on engineering and science programmes brought about improved learner success.

In some colleges, course risk assessments have been introduced as part of mid-year self-evaluation activities to identify learners at risk of withdrawal or likely to complete with partial success. In these colleges, staff work with identified learners to produce individual learner action plans to support and improve success outcomes.

## West Lothian College: Programme Risk Assessment

West Lothian College has introduced a risk-based approach to addressing partial success rates in academic year 2014-2015. In December all programme teams reviewed learner progress and identified learners who were thought to be at risk of successful completion on the basis of:

- attendance;
- high levels of remediation; and
- block 1 assessment failure.

The outputs from this exercise were reported to the Quality Centre in February when staff conduct in-year self-evaluation reviews. On the basis of the risk assessment, resources were made available to teams to deploy to best meet the needs of their learners. This has resulted in:

- additional teaching time and exam preparation in science programmes;
- additional workshops to support core skills achievement;
- very focussed learning support provided to individuals in groups; and
- the establishment of a homework class for business learners.

In engineering programmes mathematics is a challenge for many learners. In response additional support for mathematics has been put in place for current learners and a summer school is planned for next year's intake to prepare them for their engineering programme experiences.

The programme risk assessment process is at too early a stage to evaluate its impact fully. However, the process has allowed the college to deploy resources in the form of early and focussed interventions which may support some learners who would have completed with partial success to complete successfully.

In one college, a Learner Success Summit led to the creation of a new role of Learner Success Mentor across the college. This full-time role involves the postholder proactively working with programme teams to identify and address issues which might contribute to withdrawals or partial success. This is supported by detailed monitoring reporting on a very regular basis. In one college, an Attainment Working Group has been established to increase achievement and reduce partial success outcomes. The working group are developing a cross-college attainment strategy to support staff in tackling these issues.

## Borders College: Learner Success Summit

Borders College held a Learner Success Summit in February 2014. In workshops led by vice principals and heads of faculty, staff worked together to generate 'hot ideas' to identify factors that have significant influence on learner success rates. They also considered changes that would have a positive impact on learner success.

The summit highlighted the benefits of introducing the new role of the Learner Success Mentor, to address an area of development highlighted from a recent Education Scotland external review. The key focus of the Learner Success Mentor is to collaborate with teaching staff to support at risk learners to remain on their programme and be successful. To support the process, a learner attendance support policy and procedure was developed.

Learners' attendance is monitored on a regular basis and, where there are concerns action is taken by the Learner Success Mentor, in liaison with course tutors. They meet with the identified learner and work with them to encourage them to return and successfully achieve their programme. This is achieved by supporting learners to deal with a range of issues, and actively signpost them to the most appropriate service to assist them.

## 6. Partial success profile - a self-evaluation tool

Prior to the fieldwork visits in this task, Education Scotland produced a partial success profile for each of the four colleges visited. The profile was constructed from the college's own FES data that Education Scotland receive annually from SFC. The profile report contains an analysis of the college's data in relation to partial success rates, including the distribution of a partial success profile, broken down by a number of factors:

- mode of attendance;
- level of programme;
- subject area;
- gender;
- deprivation index;
- ethnicity; and
- disability.

The profile report was sent to the colleges in advance of the visit to allow them sufficient time to consider its findings. Colleges found the profile helpful and welcomed the more detailed analysis and supporting narrative. It helped the colleges to ask supplementary questions of themselves in particular areas. The profile was used during the visit to promote professional discussions with staff and managers around partial success rates.

An example of the partial success rate profile report is shown in appendix 4. It contains illustrative data and analysis for a fictitious Scottish college - Robert Burns College.

## 7. Recommendations

## Colleges should:

- identify programmes on which learners completing with partial success attain no units, and analyse and understand better the reasons.
- reduce the number of learners who complete programmes with partial success, particularly on full-time programmes, and achieve no units.
- target support for learners who are just short of completing successfully and support them appropriately to complete successfully, to raise attainment.
- continue to monitor and act upon poor attendance patterns to identify and support learners to complete programmes successfully.
- ensure arrangements to track and monitor the progress of learners are effective.
- ensure programme self-evaluation activities examine fully the underlying reasons for learners completing with partial success and take actions to improve programme attainment.

## Education Scotland should:

- $\quad$ support colleges in identifying actions to improve learner success, particularly with learners completing with partial success.
- offer colleges the opportunity to use the partial success profile report as a focus for professional discussion around partial success.
- continue to monitor progress on the above recommendations through on-going engagements with colleges, and disseminate information on key improvements as they emerge across the sector.

## College Development Network should:

- draw on the findings of this report to support colleges to take forward the recommendations.

## Appendix 1

## Colleges visited during the fieldwork

- Borders College
- Glasgow Kelvin College
- North Highland College UHI
- West Lothian College

Inspectors also met with the college regional leads for the Care Strategic Steering Group and that professional dialogue informed this report.

## Appendix 2

## Performance Indicators

Table 1: Learner success 2010-11 to 2013-14
Full-time FE

|  | Early <br> withdrawal | Further <br> withdrawal | Partial <br> Success | Completed <br> successfully |

## Appendix 4

Partial success profile - Robert Burns College

## Partial Success

## Robert Burns College

The data contained in this report relates to Robert Burns College, a fictitious Scottish college. This data has been produced to provide an example of the kind of report that could be produced.

## Mode and level of study

NOTE: As part-time students generally do fewer units, this is likely to be a factor in the high proportion of partial success students completing no units.

| National Sector Performance (2013-14) |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Distribution of Partial Success |  |  |  |  |
| Mode | Level | Initial Enrolment | Success rate | Partial Success Rate | $0 \%$ of units | Less than 25\% of units | $\begin{gathered} 25 \%-49 \% \\ \text { of units } \end{gathered}$ | $\begin{gathered} 50 \%-74 \% \\ \text { of units } \\ \hline \end{gathered}$ | $\begin{gathered} 75 \%+\text { of } \\ \text { units } \\ \hline \end{gathered}$ |
| FT | FE | 51,031 | 66\% | 11\% | 4\% | 10\% | 26\% | 39\% | 21\% |
| FT | HE | 32,039 | 71\% | 13\% | 5\% | 19\% | 27\% | 27\% | 22\% |
| PT | FE | 96,917 | 78\% | 13\% | 52\% | 5\% | 12\% | 19\% | 13\% |
| PT | HE | 11,270 | 78\% | 14\% | 40\% | 6\% | 12\% | 22\% | 20\% |

In full-time FE programmes, the partial success rate and the success rate are both above the national sector performance. In all other modes and levels, the partial success rate at the college is below the national figure.

In full-time programmes, there is only a small percentage of students who don't complete any units, both at the college and nationally, although the figure for full-time HE is two percentage points lower at the college. For both FE and HE, the distribution of learners completing with partial success by the proportion of units completed is similar at the college and nationally.

In part-time programmes, the proportion of partial success students completing no units is higher at the college than nationally, by eleven percentage points in HE and six percentage points in FE. There is also a large difference in the proportion of partial success students completing at least $75 \%$ of their units in part-time HE programmes, with the college's figure being nine percentage points lower than the national figure.

## Subjects

NOTE: The number of students completing their programme with partial success is very small for some subjects, so it is important to consider this when drawing any conclusions.

In the tables below: Red = Low proportion of partial success students Blue $=$ High proportion of partial success students

## Full-time

In full-time courses, there are very few partial success students achieving less than $25 \%$ of units in any subject. The subject area with the highest proportion of partial success students completing no units is Education and training, however the number of enrolments in this subject is low.

The majority of subjects have at least half of partial success students completing at least 50\% of their units.

There are four subjects where the majority of part-time partial success students completed no units at the College. These four subjects are Computing and ICT, Engineering, Languages and ESOL and Social Subjects.

Business, management and admin, Hospitality and Tourism, Special Programmes and Sport and Leisure were the subjects where more than $50 \%$ partial success students completed at least half of their units successfully.

## .Gender

| College (2013-14) |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Distribu | n of Partia | uccess |  |
| Gender | Initial Enrolment | Success rate | Partial Success Rate | 0\% of units | Less than 25\% of units | $\begin{aligned} & 25 \%-49 \% \\ & \text { of units } \end{aligned}$ | 50\% 74\% of units | $\begin{gathered} 75 \%+\text { of } \\ \text { units } \\ \hline \end{gathered}$ |
| Male | 3,244 | 79\% | 11\% | 24\% | 10\% | 19\% | 33\% | 14\% |
| Female | 3,731 | 78\% | 10\% | 40\% | 8\% | 16\% | 21\% | 16\% |
| Other | 0 | - | - | - | - | - | - | - |

| National Sector Performance (2013-14) |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Gender | Initial Enrolment | Success rate | Partial Success Rate | Distribution of Partial Success |  |  |  |  |
|  |  |  |  | 0\% of units | Less than 25\% of units | $\begin{aligned} & 25 \%-49 \% \\ & \text { of units } \end{aligned}$ | $\begin{gathered} 50 \%- \\ 74 \% \text { of } \end{gathered}$ units | $\begin{gathered} 75 \%+\text { of } \\ \text { units } \end{gathered}$ |
| Male | 92,677 | 75\% | 12\% | 26\% | 10\% | 20\% | 28\% | 18\% |
| Female | 98,564 | 73\% | 12\% | 37\% | 8\% | 16\% | 24\% | 17\% |
| Other | 16 | 88\% | 6\% | 0\% | 0\% | 0\% | 0\% | 100\% |

The partial success rate of both genders is lower at the college than nationally. This contrasts the success rate, where the college has a higher figure than the national sector performance for both genders.

At the college, female partial success students are more likely to achieve no units than males, but are also slightly more likely to complete more than three quarters of units.

For both genders, the distribution of partial success students by the proportion of units they completed successfully is similar at the college to the national sector performance.

## Deprivation

| College (2013-14) |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Deprivatio Decile |  | $\begin{gathered} \text { Success } \\ \text { rate } \\ \hline \end{gathered}$ | Partial Success Rate | Distribution of Partial Success |  |  |  |  |
|  | Initial Enrolment |  |  | 0\% of units | Less than 25\% of units | $\begin{gathered} 25 \%-49 \% \\ \text { of units } \end{gathered}$ | 50\% - <br> 74\% of units | $\begin{gathered} 75 \%+\text { of } \\ \text { units } \end{gathered}$ |
| 1- most deprived | 959 | 72\% | 13\% | 39\% | 7\% | 16\% | 20\% | 17\% |
| 2 | 878 | 75\% | 12\% | 33\% | 7\% | 18\% | 31\% | 12\% |
| 3 | 743 | 75\% | 13\% | 30\% | 12\% | 16\% | 26\% | 15\% |
| 4 | 805 | 77\% | 12\% | 28\% | 14\% | 15\% | 30\% | 12\% |
| 5 | 712 | 82\% | 8\% | 33\% | 7\% | 17\% | 26\% | 17\% |
| 6 | 688 | 81\% | 9\% | 31\% | 10\% | 19\% | 27\% | 13\% |
| 7 | 652 | 80\% | 10\% | 35\% | 9\% | 14\% | 29\% | 12\% |
| 8 | 633 | 83\% | 7\% | 33\% | 7\% | 21\% | 19\% | 21\% |
| 9 | 483 | 82\% | 7\% | 29\% | 0\% | 26\% | 29\% | 15\% |
| 10 - least deprived | 357 | 82\% | 8\% | 27\% | 3\% | 10\% | 37\% | 23\% |
| 0 - unknown | 79 | 94\% | 4\% | 0\% | 0\% | 100\% | 0\% | 0\% |

| National Sector Performance (2013-14) |  |  |  |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |

Nationally, partial success rates generally fall as deprivation decreases, this is partly a consequence of success rates increasing as deprivation decreases. However, there is no clear pattern between the proportion of units completed by a partial success student and how deprived the area they come from is.

This largely holds true for the college as well, although partial success students from the least deprived areas seem to be slightly more likely to complete a large proportion of units than those from the most deprived areas.

## Ethnicity

| College (2013-14) |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Partial Success Rate | Distribution of Partial Success |  |  |  |  |
| Ethnicity | Initial Enrolment | $\begin{gathered} \text { Success } \\ \text { rate } \\ \hline \end{gathered}$ |  | 0\% of units | Less than 25\% of units | $\begin{gathered} 25 \%-49 \% \\ \text { of units } \\ \hline \end{gathered}$ |  | $\begin{gathered} 75 \%+\text { of } \\ \text { units } \\ \hline \end{gathered}$ |
| Ethnic minority | 385 | 73\% | 14\% | 31\% | 4\% | 15\% | 25\% | 25\% |
| White | 6,501 | 78\% | 10\% | 33\% | 9\% | 18\% | 27\% | 14\% |
| Information refused or not known | 0 | - | - | - | - | - | - | - |

| National Sector Performance (2013-14) |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Ethnicity | Initial Enrolment | $\begin{gathered} \text { Success } \\ \text { rate } \\ \hline \end{gathered}$ | Partial Success Rate | Distribution of Partial Success |  |  |  |  |
|  |  |  |  | $0 \%$ of units | $\begin{gathered} \text { Less than } \\ 25 \% \text { of } \\ \text { units } \end{gathered}$ | $\begin{gathered} 25 \%-49 \% \\ \text { of units } \end{gathered}$ |  | $\begin{gathered} 75 \%+\text { of } \\ \text { units } \\ \hline \end{gathered}$ |
| Ethnic minority | 10,873 | 70\% | 15\% | 31\% | 8\% | 16\% | 26\% | 19\% |
| White | 179,477 | 74\% | 12\% | 31\% | 9\% | 18\% | 25\% | 17\% |
| Information refused or not known | 907 | 71\% | 16\% | 43\% | 7\% | 19\% | 22\% | 9\% |

At the college the partial success rate amongst students from an ethnic minority background is higher than amongst white students. However both rates are below the national sector performance while the success rates for both groups are higher at the college than nationally.

A quarter of partial success students from an ethnic minority background completed at least 75\% of units successfully, six percentage points above the national sector performance and eleven percentage points more than white partial success students at the college.

Other than this the distribution of partial success students is similar at the college as nationally for white students and for students from an ethnic minority background.

## Disability

The partial success rate is higher amongst students with a known disability at the college than amongst students without a known disability by one percentage point. However, the partial success rate is lower than the national figure for both categories by two percentage points.

Partial success students with a known disability are less likely to have completed no units than a partial success student with no known disability, both nationally and at the college.

Partial success students with no known disability are less likely to complete 75\%+ of their units at the college than nationally (14\% compared to $17 \%$ nationally). The biggest difference between the colleges figures and the national figures for this group of students.
$18 \%$ of partial success students with a known disability completed at least $75 \%$ of their units both nationally and at the college. However only a further $23 \%$ completed between $50 \%$ and $74 \%$ of units at the college, compared to $28 \%$ nationally.

## Appendix 5

## Glossary of terms

| BME | Black and Minority Ethnic |
| :--- | :--- |
| FE | Further Education |
| FES | Further Education Statistics |
| HE | Higher Education |
| HNC | Higher National Certificate |
| HND | Higher National Diploma |
| NC | National Certificate |
| NPA | National Progression Award |
| PDP | Personal Development Plan |
| PI | Performance Indicator |
| PLP | Personal Learning Plan |
| ROA | Regional Outcome Agreement |
| SCQF | Scottish Credit and Qualification Framework |
| SFC | Scottish Funding Council |
| SIMD | Scottish Index of Multiple Deprivation |
| SVQ | Scottish Vocational Qualification |
| VLE | Virtual Learning Environment |
