This document lists the validation checks that will be performed on SSDA903 records from 1 April 2015 onwards. This is a revision from previous years and should be studied with care. All validation checks that will be performed on records that have been loaded into the system are contained in this document; there are no supplementary lists.

The validation checks in this schedule will be performed in two stages. Only if a record passes all the validation checks, in stage one, will the validation suite proceed to stage two. Failure to pass all the checks in stage one will bring the validation suite to a halt.

This is version 0.1 and is the first version of the document this year.

## Summary

This schedule contains all the validation checks that will be performed on each SSDA903 record. For each check we have provided further comments and, in some cases, background information. These are designed to give the user more information about the context of the validation failure and suggestions on how to correct it.

The validation suite will initially perform all the validation checks listed below under Stage 1. If a record passes all of these checks, the validation will move on to those checks listed under Stage 2. Failure to pass all the tests at stage 1 will halt the validation process. Any errors detected at Stage 1 will need to be addressed and amended, before the validation of that record can proceed. The rationale behind performing validation checks in two batches is to prevent errors in certain primary data fields, such as date of birth, triggering numerous validation check failures, all of which are rooted in the incorrect date of birth field. This is particularly a problem in the operation of some Cross Return Validation checks.

Several SSDA903 checks involve time limits. The duration will be calculated in a standardised manner by taking the start date away from the end date. Examples have been given to show how the duration is calculated. In some cases checks are based on statutory time limits; however the validation check applied to the SSDA903 record may allow a longer time than is stated on the face of the legislation. This is because the purpose of the SSDA903 validation checks is to identify records which are most likely to be incorrect. They are not designed as checks on court or Social Services practice. If a child really was kept under a legal status for a longer period than the law allows, we would prefer that the statistics reflected reality, rather than insisting that a record be 'doctored' so that it passes a strict validation check but no longer reflected what really happened.

## Changes to validation rules in 2015 to 2016

The following table shows the validation rules that have changed since the 2014 to 15 SSDA903 data collection. Please note the validation rules have been reviewed this year, and in some cases it was noted that the rule was not working exactly as specified in the text. In such cases, the text may have been amended, but the way the rule works has remained the same.

# Codes, Error Messages and Descriptions of Checks

The table which follows consists of:

- The check number (please note that some numbers have been left unused, to accommodate new checks which might be required in the future).
- The error message (as it will appear at the bottom of each SSDA903 record in error).
- Explanatory text consisting of a brief explanation of the coding rule that has been broken, followed by background information or advice to help with correcting the record.

## Stage 1

<b>New Error Code</b>	<b>Message to be Shown on Validation Report</b>	<b>Coding Rule (and comments which will be provided as guidance for LA staff)</b>
101 (amended)	Gender code is not valid.	The gender data item must be either: 1 = boy, or 2 = girl.
102	Date of birth is not a valid date.	The date should be entered in the format DD/MM/YYYY and should contain a valid date. <ul style="list-style-type: none"><li>• Check you have entered a real date, in the right format (eg not '03/20/2001', '31/02/2001', or '31/01/01', etc.).</li></ul>

624	Date of birth of the first child contradicts the date of birth of the first child previously recorded.	If a child has been recorded as being a mother in a previous year then the date of birth of the first child must be consistent between years, except when comparing to year ending 31 March 2006 if the date of birth of the first child was recorded as an approximate date.
625	Date of birth of the first child is beyond the end of this reporting year or the date the child ceased to be looked after.	If a child has been recorded as being a mother in the latest reporting year then the date of birth of the first child must not be beyond the end of this reporting year (31 March 2016) or the date the child ceased to be looked after.
626	Child was reported as a mother but the date of birth of the first child is before the current year which contradicts with the mother status recorded last year.	If a child has been recorded as being a mother in the latest reporting year and the date of birth of the first child is in a previous year, then the mother status must be consistent between the year the mother's child was born and the latest year.
627 (deleted)	SDQ score is zero.	<p>A SDQ score of zero, though a valid score, is very unlikely.</p> <ul style="list-style-type: none"> <li>• Check that this is correct; A SDQ score of zero should be very rare but if you are certain that the score is correct contact DfE.</li> </ul>
628 (amended)	Motherhood details are not required for care leavers who have not been looked after during the year.	<p>Mother status field should be left blank for young people for whom care leaver information is returned.</p> <p>However, if the care leaver also had episode information recorded for this collection year, motherhood status should be returned.</p>

631	Previous permanence option not a valid value.	<p>Previous permanence option not a valid value.</p> <p>Valid values are:</p> <p>P1 = Adoption;  P2 = Special Guardianship Order (SGO);  P3 = Residence Order (RO);  P4 = Unknown;  Z1 = No previous permanence option.</p>

New Error Code	Message to be shown on Validation Report	Coding Rule (and comments which will be provided as guidance for LA staff)
632	Date of previous permanence order not a valid value.	<p>Date should be entered in the format DD/MM/YYYY and should contain a valid date. The date should be before the start of this current episode of care.</p> <ul style="list-style-type: none"> <li>• Check you have entered a real date, in the right format (eg not '03/20/2001', '31/02/2001', or '31/01/01', etc.).</li> </ul> <p>Acceptable value where date is not known will include zz where zz is day, month or year value).</p>
633	LA code where previous permanence option was arranged is not a valid value.	<p>The LA code should be a valid LA code or one the following codes:</p> <p>NIR = Northern Ireland;  NUK = Outside of the UK;  SCO = Scotland;  WAL = Wales.</p>
634	There are entries for previous permanence options but child has not started to be looked after from 1 April 2013 onwards.	There are entries in either the fields for previous permanence option but the child has no episode indicating that a period of care started after 1 April 2013.
635	There are entries for date of order and LA code where previous permanence option was arranged but previous permanence code is Z1.	If there was no previous permanence option arranged there cannot be a date or order or a LA code where previous permanence option was arranged.
636	Date of previous permanence order is after the child started to be looked after.	Check that the date of the previous permanence order is not after the date the child started to be looked after.

## Bypassing Errors

The following errors can be by-passed. Errors which can be by-passed are those where the data is unusual but could be correct as it reflects the actual situation. It would not be expected that data which triggers errors outside of this list would be correct and only those errors listed below can be by-passed. All requests to bypass an error must be directed to the Helpdesk via the [service request form](#).

Error numbers of by-passable errors are given in the table below:
