1 Introduction

1.1 Audience and purpose

This document specifies the data to be returned to the department during the 2018 school level annual school census (SLASC) provided by registered independent schools and is specific to registered independent schools only.

New or changed items (from the 2017 SLASC collection) are highlighted in yellow. Where the language used within the document has been updated / amended – but the intent of the paragraph / sentence has not altered (and no new items / elements have been added) - such updates / amendments have not been marked as changes. However, all dates within the document have been updated, but are not highlighted, as these are not new items.

1.2 Statutory requirement

Completion of the census is a statutory requirement under the [Education \(Independent Educational provision in England\) \(Provision of Information\) Regulations 2010](#), which are made under the [Education and Skills Act 2008](#).

A statutory requirement:

- means that independent schools do not need to obtain staff or proprietor consent to the provision of information
- ensures independent schools are protected from any legal challenge that they are breaching a duty of confidence to staff or proprietors
- helps to ensure that returns are completed by independent schools
- means that all census elements are mandatory unless specifically stated to be voluntary

A school which fails to complete the census can be removed from the register of independent schools.

1.3 Technical specification

The technical specification for the 2018 collection is comprised of the following documents:

- this MS Word document containing a narrative and sample XML messages
- the common basic data set ([CBDS](#)) MS Excel workbook

- the validation rules in an MS Excel workbook

A guide is also produced to inform independent schools, in non-technical terms, of the data collection requirements and advise on what they need to provide. This documentation is available on the department's [website](#).

The scope of the census collection (that is: which pupils and data items are included) is defined by this MS Word document and not by the validation rules. The validation rules are provided to assist software suppliers in the development of their systems and to enable a check of the data extracted for the collection.

1.3 Business rationale

The following factors are the business drivers behind this approach:

- it is consistent with the overall vision behind the data sharing protocol of collecting data once and using it many times
- it is based on the principle that schools are expected to hold / manage data or have data held on their behalf so that they can access and extract it

1.4 Assumptions

Assumptions made in creating this specification:

- this specification is for a return using COLLECT as the data collection mechanism. This is the department's preferred data collection method. Where returns are generated from the school management information system (MIS), the department will only accept submissions which are in XML format
- returns via direct manual input into COLLECT may also be made
- where appropriate the data specification has used e-Gif data standards

1.5 Coverage and timings

All independent schools are required to capture the data specified for the 2018 census. The data is collected via the department's COLLECT system from the 18 January 2018. The statutory return deadline is 18 February 2018.

1.6 Collection timing

The school level annual school census data for registered independent schools is collected on an annual basis. The census date is the third Thursday in January (18 January 2018).

1.7 Changes from the 2017 SLASC specifications

1.7.1 New data items

No new data items have been added to the census.

1.7.2 Existing data items

There have been no changes to existing data items.

1.7.3 Removal of data items

No data items have been removed.

2 Structure and guidance

2.1 Outline data content

Each return from a school will consist of a header and one or more school modules.

2.2 Message header

A standard XML message header is required for each census file. Annex A of this specification contains a sample XML message header. The data items required within the header are as follows:

Survey Collection Name <Collection> (800001) will be SLASC. <i>Description: name of the data collection that is: SLASC.</i>
Survey Year <Year> (800003) will be 2018. <i>Description: the year of the collection.</i>
Survey Reference Date <ReferenceDate> (800004) will be 2018-01-18. <i>Description: the reference date is normally the day of the census or collection. It is used as the baseline date from which comparisons with other dates in the return can be made.</i>
Source Level <SourceLevel> (800005) will be S. <i>Description: must be set to S for a school system (local authority level code L is not applicable for this collection).</i>
LA <LA>, (200001) is the local authority number. <i>Description: standard departmental three digit local authority number.</i>
Estab <Estab>, (200636) will be mandatory and the tags should be included in the XML. <i>Description: standard departmental four digit establishment number.</i>
Software Code <SoftwareCode> (800006) is the code indicating the software supplier. This is allocated by the supplier.

<p><i>Description: software product identification. Suppliers must advise the department of the code used.</i></p>
<p>Release <Release> (800008) is a code / date (or combination) provided by the software supplier to assist in identification.</p> <p><i>Description: software product identification.</i></p>
<p>Serial No <SerialNo> (800007) will start at 001 and then be incremented by 1 each time a new file is prepared for submission.</p> <p><i>Description: an incremented number generated by a provider's software. Enables data collection systems to identify re-submissions.</i></p>
<p>Date / Time <DateTime> (800010) is the date and time when the file was prepared or generated in CCYY-MM-DDThh:mm:ss format.</p> <p><i>Description: date and time of generation of the return.</i></p>
<p>CBDS Level <CBDSLevel> (800011) will be school.</p> <p><i>Description: shows which of the defined CBDS levels are present within a data return.</i></p>

3 Guidance section

3.1 Overall description and scope

The details below describe the 2018 school level annual school census collection for registered independent schools.

3.2 Outline data content

The return will contain a number of modules for each school. All data items included in each of the modules are described within the Common Basic Dataset ([CBDS](#)).

3.3 Section 1 – general school information

This section contains general information and contact details for the school and consists of the following items:

3.3.1 School

a) Direct input via COLLECT

- name
- main school address
- postcode
- telephone number
- headteacher's name (title, forename and surname)

4 Data return formats

A submission file from the school is to be provided in a XML file structure as described in Annex A of this specification. Where an optional item is not included then the associated XML tag should also be omitted. Where a mandatory item is omitted then an error will be generated.

4.1 Special notes for XML returns

The standard XML entity references should be used for the following special characters:

Character	Entity reference
Ampersand (&)	&
Left angle bracket (<)	<
Right angle bracket (>)	>
Single quote / apostrophe (')	'
Double quotes (")	"

For special characters such as é use a character reference such as é. This produces a generic XML file which can be viewed as such in a suitable browser. Details of all such characters are found within the XML standard documentation; see for example [WC3](#), section 2.2.

It is expected that all numeric data will be supplied as integers.

5 Data validation rules

This section specifies validation rules that are applied to the data by the department, using COLLECT. They should also be applied, as far as possible, by schools prior to loading the data into the COLLECT system and any issues resolved before continuing with the upload to COLLECT. Those data items included in the specification but not appearing in the validation rules, that is: those not shown in the validation rules as must be present - should be supplied where available. The rules also show which validations are errors and which ones are queries. An error is a failed validation check that must be corrected. A query is one which must be investigated, and potentially corrected or explained, as it identifies data that we would not usually expect and may be invalid.

Syntax:

- validation checks are expressed as conditions that must be true (errors) or that should be true (queries). The error message shows what is displayed if the condition fails
- data items are indicated using the XML tag with the CBDS number in parentheses where this number is available. Many data items do not have CBDS numbers. CBDS tends mostly to cover individual data items not aggregate sums of pupil numbers against certain characteristics
- data groups are indicated using the XML tag only
- single dates or date ranges are sometimes defined in relation to the <ReferenceDate> (800004), which is taken from the XML header

6 Resubmission guidance

When resubmissions are required the serial number in the header must be incremented by the provider's software. Only a whole file can be resubmitted therefore a resubmission will delete and replace all of the data contained in the previous submission.

7 Valid values

Valid item values must be in the list or range specified in the common basic dataset, ([CBDS](#)) - subject to the exceptions and restrictions below.

Currently not all the specification is in line with CBDS. This is because data items are mainly aggregations. CBDS mainly covers individual data items not aggregate sums of pupil numbers against certain characteristics.

7.1 Local authority codes

Local authority codes [CBDS number (200001), codeset D00004] for this collection only covers local authorities in England. Coverage also excludes local authority codes:

- 001, 003, 167;
- codes starting with 6 and 7;
- XXX, MMM and NAA.

7.2 Establishment number

Establishment number [CBDS number (200636), codeset D00036] for this collection only covers the following ranges:

- 6000-6899 Independent

8 General notes

XML file generic naming conventions

The following file naming conventions apply: the file extension will be XML. The file name shall be constructed from the following components:

- origin identifier consisting of the local authority number followed by the establishment number (7 digits) – such as: '8016000'
- census / data extraction type where 'IND1' indicates that it is an independent school file containing aggregated school level data relating to the January school level annual school census (SLASC)
- destination identifier where the first three characters are the local authority number, fourth / fifth characters are 'LL' and the sixth / seventh characters are the last two digits of the year (7 characters) – such as: '801LL18'
- serial number (3 digits) – such as: '001'
- The components should be separated by underscore characters (_).

An example of an 'IND SLASC' file:

- 8016000_IND1_801LL18_001.XML

The total file name length = 28 characters.
