Introduction

This factsheet provides provisional information on the incidence of apprenticeships in England using information between 2010/11 and 2014/15 from the Individualised Learner Record (ILR) and Employer Data Service (EDS) further matched to the Inter-Departmental Business Register (IDBR). Specifically, it presents the number of apprenticeship starts and participation by Standard Industrial Classification of economic activities (SIC) 2007¹, enterprise employment size band, Government Office Region (GOR), apprenticeship level, legal status of enterprise, age group of apprentice and gender. The geographical information refers to the delivery location, while the information on sector of activity refers to the enterprise.

In relation to the breakdown of apprenticeship starts by enterprise characteristics, the data covers between 78% and 83% of all *enterprises* engaged in publicly funded training in England (depending on the year of analysis, with a higher match rate in more recent years). These matched enterprises account for around 90% of all *apprenticeship starts* and *participation* in 2014/15 (with larger enterprises more likely to be matched in the data and accounting for a larger share of apprenticeships undertaken).

Key points

Trends in apprenticeships by industry sector

Apprenticeship starts and participation by industry sector and employment size (Table 1 and Table 2, Appendix A)

The overall number of apprenticeship starts and participation have risen over the past five years. In general, apprenticeships are less commonly undertaken within medium-sized enterprises (between 14% and 16% of the total). In contrast, the incidence of apprenticeship participation within small enterprises (42% of total participations in 2013/14; and 43% in 2014/15) has overtaken the numbers participating in larger enterprises (42% in 2013/14; and 41% in 2014/15).

Across all five academic years, the highest incidence of apprenticeship starts are in the “Human Health and Social Work Activities” industries (SIC 2007 - Q), irrespective of employment size band. This incidence becomes more pronounced over time, rising from 18% of all apprenticeship starts in 2010/11 to 25% in 2014/15 (16% to 24% for

¹ For an explanation of SIC codes, please see https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/455263/SIC_codes_V2.pdf

participation). In contrast, there are very low numbers for starts and participation in “Mining and Quarrying” (SIC 2007 – B).

There are also notable differences across employment size bands: for example, in 2014/15, the majority of apprenticeships in “Public Administration and Defence; Compulsory Social Security” (SIC 2007 – O) are concentrated in large enterprises (98% of total) while apprenticeships in “Construction” (SIC 2007 – F) are concentrated in small enterprises (72% of total).

Apprenticeship starts and participation by industry sector and Government Office Region (GOR) (Table 3 and Table 4, Appendix A)

In 2014/15, the highest incidence of apprenticeship starts were in the North West (16% of total) and the least in the North East (7% of total). This pattern holds true for participation with 16% of all participations in the North West and 7% in the North East. Across all regions, the largest share of apprenticeship starts are in “Human Health and Social Work Activities” (SIC 2007 – Q).

In the North West and West Midlands, the highest percentage of all apprenticeship starts were in “Human Health and Social Work Activities” (26% in North West; 25% in West Midlands) and “Wholesale and Retail Trade; Repair of Motor Vehicles and Motorcycles” (SIC 2007 – G) (11% in North West; 12% in West Midlands). However, the numbers in the “Wholesale and Retail Trade; Repair of Motor Vehicles and Motorcycles” sector have shown a decline in the most recent years (from 11,700 in 2010/11 to 7,830 in 2014/15 in the North West; and from 8,200 to 6,500 in the West Midlands).

Apprenticeship starts and participation by industry sector and GOR region and apprenticeship levels (Table 5 and Table 6, Appendix A)

Within the North West and West Midland regions, the dominance of “Human Health and Social Work Activities” (SIC 2007 – Q) seen in the previous tables is prevalent at all apprenticeship levels. However, the number of apprenticeship starts seen in “Wholesale and Retail Trade; Repair of Motor Vehicles and Motorcycles” (SIC 2007 – G) and “Transport and Storage” (SIC 2007 – H) are largely made up of Intermediate level apprenticeships (70% and 73% respectively). This relatively high incidence of Intermediate level apprenticeships also exists at the national level. The majority of apprenticeship starts and participation are at the Intermediate level in all regions, and this has been the case in each of the five years. At the other end of the spectrum, higher level apprenticeships are relatively scarce: less than 5% of each region’s apprenticeships were at the higher level in 2014/15, but this is an increasing trend from a baseline of 0-1% in 2010/11.

Apprenticeship starts and participation by industry sector by GOR region and legal status of enterprise (Table 7 and Table 8, Appendix A)

In the 2014/15 academic year, across all regions, the majority of apprenticeships are undertaken with privately owned companies (typically between 60% and 80% of starts and participation each year, compared with the national average of 73%). In contrast, there are few apprenticeship starts within Public Corporations (0-1% of all starts in a given region).

The analysis for 2014/15 suggests there was a relatively high incidence of apprenticeship starts taking place in private companies in the “Human Health and Social Work Activities” industries (SIC 2007 – Q) and “Wholesale and Retail Trade; Repair of Motor Vehicles and Motorcycles” (SIC 2007 – G). The “Human Health and Social Work Activities” (SIC 2007 – Q) industry remained the most common apprenticeship industry amongst all enterprise types other than amongst Central Government, Public Corporations and Local Authorities, where the most common apprenticeship starts occurred in the “Public Administration/Defence (SIC2007-O), “Transport and Storage” (SIC 2007 – H) and “Education” (SIC 2007 - P) industries respectively.

Apprenticeship starts and participation by industry sector by apprenticeship levels, age group and gender (Table 9 and Table 10, Appendix A)

In each age-band, the majority of apprenticeships were at the Intermediate level. However, the proportions undertaking Advanced and Higher apprenticeships were relatively large amongst the older age groups (aged 19-24 and 25+). Interestingly, despite this age-related trend, the highest frequency of Intermediate apprenticeship starts occurred amongst those aged 25+ (39% of all intermediate apprenticeships in 2014/15 compared to 31% in the same year for under 19’s), and this pattern is consistent with participations. In terms of gender differences, at the intermediate level, there is a roughly even split between men and women. However, this becomes more skewed towards women as the level increases (66% of Higher level apprenticeships starts in 2014/15 were undertaken by females, with the corresponding estimate for Advanced apprenticeships at 55%).

Profile of Enterprises with Apprenticeships

Enterprises with apprenticeship starts and participation by industry sector and employment size (Table 11 and Table 12, Appendix A)

The majority of the enterprises with apprenticeship starts and participation are in small enterprises (0-49 employees), with these enterprises primarily offering apprenticeships in the “Human Health and Social Work Activities” (SIC 2007 – Q), “Construction” (SIC 2007 – F), “Wholesale and Retail Trade; Repair of Motor Vehicles and Motorcycles” (SIC 2007 – G) industries. This is consistent with the large numbers of apprenticeship starts in these

industries . Although there is a significantly greater number of small enterprises providing apprenticeships compared to large enterprises (250+ employees), the relatively high frequency of apprenticeship take-up amongst the large enterprises, and the relatively high number of apprenticeship starts per large enterprise means that there is a large incidence of publicly funded training taking place in large enterprises overall. Specifically, although large enterprises account for just 5-6% of the enterprises with apprenticeship starts, 39-46% of the actual number of apprenticeship starts take place within large enterprises across all five academic years from 2010/11 to 2014/15.
