GOV.UK Search **Coronavirus (COVID-19)** | Guidance and support Home > Coronavirus (COVID-19) > Education and childcare during coronavirus > Pupil wellbeing and safety during coronavirus > Use of the NHS COVID-19 app in schools and further education colleges Part of **Education and childcare during coronavirus** Department Department for Education of Health & Social Care Guidance Use of the NHS COVID-19 app in schools and further education colleges Published 22 September 2020 Introduction Contents Introduction Required action: leaders This guidance is for leaders and staff in schools and further education (FE) and staff should familiarise colleges in England¹. themselves with the features of the app The NHS COVID-19 app ('the app') is a key part of the country's ongoing Required action: leaders coronavirus (COVID-19) response, aiming to extend the speed, precision and should understand how the reach of NHS Test and Trace in England, as well as NHS Test, Trace and Protect app relates to their setting's in Wales. The app will complement the overall service by automating some process for managing a positive case and/or an aspects of the process of contact tracing. Working together, NHS Test and outbreak Trace and the app are designed to slow the spread of coronavirus (COVID-19) Required action: leaders by alerting people who may have been exposed to infection so that they can should understand how the take action. app's 'Trace' feature relates to their setting's existing The app is available to download for anyone aged 16 and over if they choose to process do so. For some young people, particularly those with special educational Required action: consider needs and disabilities (SEND), parents will need to decide whether or not their how the app relates to your setting's mobile phone use of the app is appropriate. This aligns with wider NHS services which are policies generally offered to those aged 16 and over as routine. This will mean that some Required action: students in year 11, and the majority of students in years 12, 13 and in FE communicate with staff colleges will be eligible to use the app and benefit from its features. Staff about use of the app members will also be able to use the app. This document is intended to provide Desired action: consider information to senior leaders in education about the app and how it works, and communicating with to set out guidance for its use within schools and FE colleges in England. students and parents about the use of the app This guidance should be read alongside: Desired action: consider whether to use the check-in function for any activities or • Guidance for full opening: schools provision in your setting Guidance for full opening: special schools and other specialist settings where members of the public take part or make use Actions for FE colleges and providers during the coronavirus (COVID-19) of premises <u>outbreak</u> **Further information** Providing apprenticeships during the coronavirus (COVID-19) outbreak Working safely during coronavirus (COVID-19) Required action: leaders and staff should familiarise themselves with the features of the app The app has 6 key features that will help to reduce personal and public risk: • Trace – alerts the individual if they were in close contact with a confirmed case • Alert – provides the individual with the risk level associated with coronavirus (COVID-19) in their local area, based on the postcode district they enter • Check in – allows the individual to check in to locations via the app and official NHS QR codes • Symptoms – allows the individual to check symptoms against government guidance and to get advice • Test – allows the individual to order a free test and to receive results and advice via the app Isolate – provides an isolation 'companion', which counts down how many days they have left to isolate and provides links to useful advice Bluetooth needs to be enabled on the phone as the app uses Bluetooth low energy to anonymously assess the distance, over time, between people who have downloaded it. If an individual with the app tests positive for coronavirus (COVID-19), the app will ask them to allow those that they have been in contact with to be alerted. If so, the app will then alert relevant individuals if they have been in close contact with a positive case. 'Close contact' is based on an algorithm, but generally means you've been within 2 metres of someone for 15 minutes or more. Individuals are not informed who the positive case is. It is possible to pause the contact tracing function ('trace') in the app. If paused, the phone and Bluetooth remain on but the phone does not record contacts. Pausing contact tracing is only recommended in 3 situations: • when an individual is not able to have their phone with them, for example because it is stored in a locker or communal area – this is to avoid the app picking up contacts when the individual is not with their phone • when an individual is working behind a perspex (or equivalent) screen, fully protected from other colleagues and members of the public, as the individual is considered to be adequately protected from contracting

coronavirus (COVID-19)

in a health or care setting where staff are wearing medical grade PPE (for

example, a surgical mask) as these individuals are also considered to be

adequately protected Further information about how the app works is available on the NHS COVID-19 app support page, alongside frequently asked questions for younger users.

Required action: leaders should understand how the app relates to their

feature relates to their setting's

existing process

call will be with a dedicated team of advisors who will inform the setting of

through a risk assessment to identify close contacts. Depending on the

in the guidance for full opening for schools and further education colleges in

the autumn term, is still in place and is not changed by the introduction of the app. If a setting becomes aware that a student or member of staff has tested positive for coronavirus (COVID-19), they can contact the new Public Health England service, delivered by the NHS Business Services Authority, if they need support on the action they should take. It can be reached by calling the Department for Education's existing coronavirus (COVID-19) helpline number

setting's process for managing a

positive case and/or an outbreak

Use of the app does not replace the requirement of individuals to social distance or to report positive cases to the setting. Neither does the app change the processes of escalation if there any positive cases linked to education settings. It is possible that whilst in their setting, students or staff could receive a notification via the app that they have been in close contact with a confirmed case and should therefore self-isolate. Close contacts are likely to have taken place at least 1-2 days previously. The app uses the minimum amount of personal data possible, which means it will not know if that contact took place in an education setting.

We recommend that settings inform all of their students, in particular those

during the day that they had been in contact with a positive case. To support

this, the notification itself will advise them that if they are under the age of 18,

they should show the message to a trusted adult and self-isolate. The staff

making appropriate arrangements for the student to leave the setting at the

If a staff member receives this notification, they should also follow the usual

member should then put in place the setting's agreed process, including

earliest opportunity to begin self-isolation.

who are under 18, to inform a member of staff if they receive a notification

process of informing an appropriate person at the setting before self-isolating. Settings will want to consider what action they would need to take if a number of staff members were informed at the same time that they had been in close contact with a positive case, to ensure continuity of education. No further action is needed unless the student or member of staff goes on to become a confirmed case themselves.

relates to your setting's mobile phone policies There is no requirement for settings to change existing policies on the use of mobile phones by students due to their use of the app. Manual contact tracing through NHS Test and Trace will continue to be used when a positive case is identified in an education setting and local health protection teams will continue to support settings if an outbreak is confirmed. The app will

There are likely to be benefits to settings, if a number of students and staff have

the app and make use of it during the day. This is because the information it

required to self-isolate when there is a positive case. Whilst we do not require

settings to change their mobile phone policies, settings may want to do so if

they currently do not allow mobile phones on site, require mobile phones to be

provides may help to limit the number of other students and staff who are

complement this process, but is not required for it to work.

Required action: consider how the app

switched off during the day or require phones to be left in lockers or similar. Settings choosing to allow mobile phones to be switched on and with students during the day can still require phones to be on silent and in pockets or bags that are with the student at all times, as the app will work in the background.

Where mobile phones are allowed to be on and with

If this is the case, it is recommended that contact tracing is left on by students,

during physical education or in some work placements in FE. In these situations

Where mobile phones are required to be switched off

to be consistent with general guidance on the use of the app. There are still

likely to be times when students and staff are not near their phones, such as

contact tracing should be switched off, and settings might want to issue

reminders to pause contact tracing for these sessions and turn it back on

the student at all times

afterwards.

at all times The app will not work when the phone is switched off. Where mobile phones are required to be left in lockers or bags in communal areas at all times

It is recommended that settings advise or require students to pause contact

tracing whilst on the premises under these circumstances, to avoid the app

misidentifying close contacts. When someone switches it off, the app will give

the user the option to set a reminder for 4, 8 or 12 hours, after which they will

receive a notification to remind them to switch contact tracing back on.

Required action: communicate with

Staff will need to be aware that students may have the app on their phones and

may be informed by the app, whilst at the setting, that they have been in close

contact with a positive case. Staff therefore also need to be aware of what to

do if a student reports receiving such a notification to them, including who to

inform. If the student is a child in care, a care leaver or adopted, we would

Settings should also discuss with staff their own use of the app, including

and appropriate processes to follow should they receive a notification

pausing it if there are periods of time when they will not be near their phone,

themselves. Settings might wish to recommend that staff download and use

appropriate professionals are also alerted.

the app, if they think this would be beneficial.

Desired action: consider

function.

should follow their usual process.

notices to check whether this is covered.

Not all students aged 16 and over will have mobile phones or use the app and there is no requirement for them to do so, but it is likely that many will. It is therefore advisable to ensure all students in the setting are aware of the approach the setting is taking to the app. Where the setting recommends pausing the contact tracing feature on the app some or all of the time,

processes may be put in place and supporting materials, such as posters, used

to help remind students to do so, and to reactivate it as soon as they retrieve

It is also possible that younger students will use the app despite the lower age

limit being 16. Settings should make clear to those students, and if necessary

parents, that use of the app is not recommended for students younger than 16.

However, should a student below the age of 16 use the app and receive a

notification that they have been in contact with a positive case, the setting

We recommend that settings ask all students to inform a member of staff if

they receive a notification stating they have been in close contact with a

positive case, and that this should be done before leaving the premises.

Students should also be informed about what the setting will do with the

information provided and, as is the case whenever a positive case or contact is

identified in a setting, how privacy will be managed and balanced with the need

to inform people affected. Settings are advised to review their existing privacy

Settings might also want to consider how the app features in their behaviour

the setting and at what points it is appropriate for them to check their phone

policies, for example making clear how they expect students to use the app in

for notifications. It might also cover how intentional misuse of the app (such as

logging symptoms they do not have in order to receive a recommendation to go

home and self-isolate) or checking the app during lessons, in contravention of

Communication with parents may be useful, so they understand how the app is

information about the app, and frequently asked questions are available on the

situations where the app may identify contacts that the setting's process does

not. They may also wish to understand how any information their child receives
