# 1. Overview of formats for loading data

Local authorities will have two options for preparing the children looked after data in a suitable electronic format which can be directly loaded into the system:

- one XML file; or
- ten separate CSV files.

## 1.1 XML format

The file 'CLA.xsd' is the XML schema and sets out the required layout for a children looked after XML file.

The schema will be made available on our [website](#) and we will write to local authorities and software suppliers to let them know when this happens.

### 1.1.1 List of XML tags

For a list of required XML tags refer to the XML schema.

### 1.1.2 Blank tags

The requirement for blank tags was relaxed in 2009 to 2010 in order to reduce the file size. The attribute 'minOccurs' has been added to the tag to identify whether or not the element is required. The default is 1 (mandatory), but where 'minOccurs' = 0 this means that the element is optional. If a tag has been identified as optional and you do not have any data for it, then you have two options which depend on the specification of the minimum length attribute, 'minLength':

- if 'minLength' is 0 or unspecified, then you can leave the tag blank;
- if 'minLength' is greater than zero, then the tag cannot be left blank and must be deleted.

### 1.1.3 Using XML

Whilst XML files can be created using a standard commercial package designed for the purpose, XML files for loading children looked after data are best prepared as a direct data output from your own system. DfE does not recommend preparing an XML file by direct input from a keyboard. If local authorities are obliged to key in every record individually, they would be far better advised to enter their data directly onto the system input screens, rather than manually creating an XML file as an interim step prior to data loading. Please note that there should be no blank lines in your XML file as this may cause problems when uploading the file to the system.

## 1.2 CSV format

The CSV format involves the preparation of ten files in comma separated variable (CSV) file format. Column headers have been included in each file, to allow data to be checked easily.

The following points, common to all files, should be followed closely:

- a comma will be used to separate each data item from the next data item;
- if quotes are used to enclose data items, they must be double quotes (like "..."), not single quotes (like '...');
- a null data item (like 'DEC' or 'REC') must still be delimited by commas;
- dates (like 'DOB') need to be in 'DD/MM/YYYY' format (like 24/12/2012);
- leading zeros in date fields should be entered in the following format 03/01/2013;
- each record ends with a carriage return control code (with the next record beginning on a new line).

The child identifier data item like 'CHILD\_LA\_CODE' is present in all files to enable the various files to be linked on the system. When the files are downloaded, the system will check that for every record in the header file there is at least one record for the child on the episodes file. If care leaver records are in the header file, these are not to be included in the episodes file. In this case, the system will generate a warning message but this does not interfere with the loading or validation process. Conversely, the system will check that every record on the episodes file has a corresponding record on the header file.

### 1.2.1 Description of the CSV files

#### 1.2.1.1 SSSA903 load

1. The 'SSDA903' load must be done first and comprises of three files:Header file:

The first row in the header file will be a header row, as follows:

CHILD,SEX,DOB,ETHNIC,UPN,MOTHER,MC\_DOB

Each of the subsequent rows will contain the data items for each looked after child during the year ending 31 March, including those looked after under a series of short term placements. Care leaver ('OC3') records can also be included; if not then they have to be entered manually. These data items will be in the above order.

## 2. Episodes file:

The first row in the episodes file will be a header row, as follows:

CHILD,DECOM,RNE,LS,CIN,PLACE,PLACE\_PROVIDER,DEC,REC,REASON\_PLACE\_CHANGE,HOME\_POST,PL\_POST,URN

Each of the subsequent rows will begin with the relevant child code followed by the data items for a particular episode. All episodes for children looked after during the year ending 31 March should be included, each one on a separate row. These data items will be in the above order.

## 3. 'UASC' file

To be completed in respect of children who are unaccompanied asylum seeking children ('UASC') only. The first row in the file will be a header row, as follows:

CHILD,SEX,DOB,DUC

Each of the subsequent rows will begin with the relevant child code followed by the three key unaccompanied asylum seeking children (UASC) data items for each child. These data items must be in the above order.

### 1.2.1.2 Outcomes ('OC2') load

This comprises of the 'OC2' file. To be completed in respect of children who were looked after at 31 March and had been looked after continuously for at least the previous twelve months only. The first row in the 'OC2' file will be a header row, as follows:

CHILD,DOB,SDQ\_SCORE,SDQ\_REASON,CONVICTED,HEALTH\_CHECK,IMMUNISATIONS,TEETH\_CHECK,HEALTH\_ASSESSMENT,SUBSTANCE\_MISUSE,INTERVENTION\_RECEIVED,INTERVENTION\_OFFERED

Each of the subsequent rows will begin with the relevant child code followed by the data items for each child who has been looked after for at least twelve months continuously at 31 March. These data items will be in the above order.

### 1.2.1.3 Adoption ('AD1') load

This comprises of the 'AD1' file. To be completed in respect of children adopted from care during the year only. The first row in the 'AD1' file will be a header record, as follows:

CHILD,DOB,DATE\_INT,DATE\_MATCH,FOSTER\_CARE,NB\_ADOPTR,SEX\_ADOPTR,L\_S\_ADOPTR

Each of the subsequent rows will begin with the relevant child code followed by the data items for each child adopted from care during the year. These data items will be in the above order.

#### **1.2.1.4 Should be placed for adoption load**

This comprises of the should be placed for adoption file. To be completed in respect of children for whom the decision is made, either during the current year, or in a previous year where the decision is still valid, that the child should be placed for adoption or for whom the decision is made during the year that the child should no longer be placed for adoption. The first row in the should be placed for adoption file will be a header row, as follows:

CHILD,DOB,DATE\_PLACED,DATE\_PLACED\_CEASED,REASON\_PLACED\_CEASED

Each of the subsequent rows will begin with the relevant child code followed by the data items for each child for whom the decision is made that the child should be placed for adoption/should no longer be placed for adoption during the year. These data items will be in the above order.

#### **1.2.1.5 Care leavers ('OC3') load**

This comprises of the 'OC3' file. To be completed for all young people who are eligible for care leaver support and whose 17th, 18th, 19th, 20th or 21st birthday falls within the collection period. For the 2020 to 202z collection, this therefore covers young people whose date of birth fell between 1 April 1999 and 31 March 2004. The first row in the 'OC3' file will be a header row, as follows:

CHILD,DOB,IN\_TOUCH,ACTIV,ACCOM

Each of the subsequent rows will begin with the relevant child code followed by the data items for each former looked after child for whom data are required. These data items will be in the above order.

#### **1.2.1.6 Reviews load**

This comprises of the reviews file. To be completed for all children looked after for at least 20 working days. The first row in the reviews file will be a header row, as follows:

CHILD,DOB,REVIEW,REVIEW\_CODE

Note that each review date for a particular child needs to be recorded on a separate row. 'REVIEW\_CODE' should be completed for all reviews held in this year.

#### **1.2.1.7 Previous permanence load**

This should be completed for each child who has started to be looked after at any point during the year. The first row in the previous permanence file will be a header file, as follows:

CHILD,DOB,PREV\_PERM,LA\_PERM,DATE\_PERM

Each of the subsequent rows will begin with the relevant child code followed by the data items for each child for whom data are required. These data items will be in the above order.

### **1.2.1.8 Missing load**

This should be completed for each child who was missing or away from placement without authorisation during the year. The first row in the missing file will be a header file, as follows:

CHILD,DOB,MISSING,MIS\_START,MIS\_END

Each of the subsequent rows will begin with the relevant child code followed by the data items for each child for whom data are required. These data items will be in the above order.

### **1.2.2 Loading sequence for CSV files**

If using the CSV option, the header, episodes and 'UASC' files must be loaded first. These three files all load simultaneously. By selecting the child id, the system will then find and load the others.

On loading, the system will check that for every record in the header file, there is at least one record for the child on the episodes file. Failure to pass this check will bring the loading procedure to a halt. If the warning message refers to care leavers, then it can be ignored.

The 'OC3', 'OC2', 'AD1', should be placed for adoption, previous permanence, missing and reviews files can then be loaded in any order. On loading each file, the system will check that for each child there is already a record on the system, either created by the current years header file, or by a 'SSDA903' file submitted in an earlier year. Failure to find an existing record, or if there is a mismatch with the date of birth, will result in the loading procedure coming to a halt.
