# Impact of COVID-19 restrictions on children and young people

September 2020

## CRWIA – Stage 3

<b>CRWIA title: Impact of COVID-19 restrictions on children and young people.</b>	
<b>Publication date: 25 September 2020</b>	
<b>Summary of policy aims and desired outcomes</b>	<p>The First Minister announced changes to the COVID-19 restrictions on 22 September. These are underpinned by the Health Protection (Coronavirus) (Restrictions and Requirements) (Scotland) Regulations 2020. Guidance in relation to these changes was published on 23 September.</p> <p><a href="#">New Staying Safe Guidance</a></p> <p>These changes aim to take immediate action to further reduce the transmission risk of COVID-19 in the community, through actions required across societal level, including businesses, service providers and Places of Worship whilst keeping schools open, childcare accessible, reducing potential pressures on the NHS and keeping people in work.</p>
<b>Executive summary</b>	<p>The rights and wellbeing of children and young people are at the centre of our response to COVID-19 which is why we have prioritised keeping schools open and ensuring that children and young people are still able to gather with their friends within the limits announced.</p> <p>In these unprecedented times, difficult decisions have had to be made. This document builds upon the work undertaken in the past months to ensure that children’s rights and wellbeing are at the heart of our response to COVID-19 and the previous CRWIAs which have been published. It sets out our efforts to mitigate the wider harms on children, through decisions that are necessary at this stage to keep our country safe. This is a global pandemic, and highly uncertain times, which means our decision making process is continuous and multi-faceted. We will continue to take every effort to ensure that children’s rights and wellbeing are central to this approach and that children’s rights and wellbeing impact assessments are undertaken and published.</p>
<b>Background</b>	<p>This CRWIA sets out the consideration which has been given to children’s rights and wellbeing for the latest restrictions on social gatherings to enable children and young people to live their lives as normally as possible, to reduce the impact on their health and wider wellbeing. It builds upon and draws from a range of other work which has been or is being</p>

undertaken to consider children's rights and wellbeing as part of our response to COVID-19.

### **Collaborative Leadership Group**

The Scottish Government set up a collaborative leadership group with a range of senior stakeholders across children's services, early on in the pandemic. This has created a space for action to ensure support for children, particularly those most vulnerable, continues throughout this period.

### **UN Committee on the Rights of the Child: COVID-19 Statement – 6 August 2020 – Scotland response**

On 8 April 2020, the United Nations Committee on the Rights of the Child published a statement that expresses concern about the situation of children globally, particularly those in situations of vulnerability, due to the effects of the COVID-19. The Scottish Government recognises the need to embed human rights of the child in taking measures to tackle the public health threat posed by the COVID-19 pandemic. The table below sets out our approach to the COVID-19 response, particularly in relation to the 11 areas highlighted by the Committee. Additionally, reporting on the use of the emergency powers contained within the Coronavirus Act 2020 and Coronavirus (Scotland) Act 2020 can be found [here](#).

### **An independent CRIA, commissioned by the Children and Young People Commissioner for Scotland was carried out on the 11 areas highlighted by the UN Committee.**

An independent CRIA was carried out on the regulations as they were amended in July 2020 by the Observatory of Children's Rights. It covered a range of themes including physical health, mental health, education, poverty, food and digital access, play, child protection, children with disabilities, children with detention. This independent analysis was extremely helpful and continues to inform our approach in relation to responding to the evolution public health situation. It can be found [here](#).

<p><b>Scope of the CRWIA, identifying the children and young people affected by the policy, and summarising the evidence base</b></p>	<p>The changes apply at a societal level and as such all children and young people under 18 are impacted. There is a disproportionate effect on children because the duration of this pandemic, and the associated restrictions takes up a greater part of the lives so far, in comparison to adults. This means that for some children, born during the pandemic, their whole lives have been during this period. For school age children, their learning has been disrupted and their ability to meet freely with their friends restricted.</p> <p>There is a strong recognition that social interactions, with friends and wider family is key part to optimise children’s development and their wider wellbeing, this has different impacts depending on their age and stage of development, and the circumstances that children are currently living in. A range of evidence has been gathered on the impact on children during this time, and it shows that although for some children the experience has had some positive effects including spending more time with their parents in the home, for the majority of children the impacts have been negative and continue to be so.</p> <p>Essential services have been maintained during this time, that is both trauma informed and responsive to need. These services have provided a ‘life line’ for some families, particularly with younger children, who may not have had access to any other support during this time.</p>
<p><b>Children and young people’s views and experiences</b></p>	<p>A series of surveys of children aged 8 -14 carried out in April, May and June<sup>1</sup> found that over half reported feeling bored often and there was a small decline in children reporting having fun things to do in their days between April (75%) and June (72%). Across all three months of the survey, 17% of children reported a worry about not being able to play or be creative.</p> <p>A survey of parents of children aged 2 – 7 year olds carried out end June to early July<sup>2</sup>, spanning the time when physical distancing restrictions were removed for under-12 year olds, found a give a mixed picture with regards to play, with some positive impacts of lockdown. For 46% of the children, parents and carers rated their imaginative play since lockdown as better than before lockdown, while 12% rated it worse. Looking at active play, 43% of children had played</p>

actively inside on at least four out of the last seven days, while 81% of children had played outside on at least four out of the last seven days.

However, looking at play with others, 14% of children had not met up with anyone else from outside their household, and a further 24% had not met any other children. In the early half of the fieldwork period, children were allowed to meet others only with physical distancing, and 76% of parents reported finding it difficult or stressful to enforce physical distancing measures.

A survey of children aged 11 to 18 carried out in April<sup>3</sup> found that 2 in 5 young people were concerned about their own mental wellbeing.

The surveys of 8 to 14 year olds<sup>4</sup> found that children displayed a decline in mental wellbeing over the three surveys. In June, more children reported being lonely, and fewer felt in a positive mood and resilient than in April. Across the months, around a third of respondents indicated that there are lots of things to worry about, while more than half expressed a general worry about the future. Around a quarter reported being worried about five or more things. Girls aged 12 – 14 were most likely to report all negative mental wellbeing impacts.

The survey of parents of children aged 2-7<sup>5</sup> found that almost half (46%) of 2 – 3 year olds and over a third (36%) of 4-7 year olds had a slightly raised, high, or very high Strength and Difficulty Score, indicating the presence of behavioural or emotional difficulties. This is higher than in a nationally representative survey completed just before lockdown.

An online survey for 12-17 year olds on the impact of lockdown on young people's health and wellbeing carried out in mid-May to early July<sup>6</sup> found significant mental health impacts. There was a three-fold increase in respondents' self-reported feelings of loneliness from nearly one in ten (9%) of respondents recalling feeling lonely before lockdown to nearly

	<p>a third (28%) reporting loneliness during lockdown. When asked if they had felt nervous or stressed because of COVID-19 in the past week, about a fifth of respondents (22%) said 'most' or 'all of the time'. Across almost all questions, 15 to 17 year olds had a worse experience than the younger age group (12-14), and girls reported a worse experience than boys.</p> <p>A survey of parents of school age children carried out in May and June<sup>7</sup>, found that three quarters of parents were worried about their child missing their friends, and 57% were worried about their child's health and wellbeing.</p>
<p><b>Key Findings, including an assessment of the impact on children's rights, and how the measure will contribute to children's wellbeing</b></p>	<p>We have continued to ensure that the best interests of the child (article 3) have been central to our response to the COVID-19, including in relation to the imposition of these latest restrictions. Consideration was given to specific articles in particular in balancing the risks of transmission with the rights and wellbeing of children and young people.</p> <p>We recognise the fundamental importance to the realisation of children's rights and wellbeing of keeping schools open ensuring that children and young people continue to access their right to education (articles 28 and 29) and rights to leisure and play (article 31) and freedom of association (article 15).</p> <p>For children and young people, the importance of maintaining social interaction and engagement with their peers is of fundamental importance to wellbeing which is why important exemptions are being applied to the general population level restrictions on social gatherings so that children and young people can to continue to, as far as possible, interact with their friends socially. The science is clear that indoor social gatherings, for any age, is not possible at this time, but outdoor social gatherings are seen as lower risk, and continue to be allowed.</p> <p>For younger children, under 11, their right to play (article 31) was actively considered, along with their lower risk for becoming seriously unwell from COVID-19 and their perceived lower risk of transmission. This age group now have the least stringent measures applied and are free to meet up with their friends, with no physical distancing, outdoors in public spaces, subject to other public health hygiene measures.</p>

<sup>7</sup> Connect survey

[https://www.connect.scot/application/files/7115/9604/1415/Connect\\_Parent\\_Carer\\_Survey\\_Next\\_Steps\\_How\\_are\\_you\\_doing\\_now\\_quantitative\\_report\\_29\\_July\\_2020\\_FINAL.pdf](https://www.connect.scot/application/files/7115/9604/1415/Connect_Parent_Carer_Survey_Next_Steps_How_are_you_doing_now_quantitative_report_29_July_2020_FINAL.pdf)

	<p>For older children and young people we have also sought to recognise the rights to leisure and play and freedom of association (articles 31 and 15) and the benefit to wellbeing of maintaining as much social interaction and engagement with friends as possible, whilst balancing the increased risks of transition. This is why specific exemptions to the general population restrictions have been put in place so that a maximum of six 12 to 17 year olds can meet in outdoor spaces, with no household limit where physical distancing is still maintained.</p>
<p><b>Monitoring and review</b></p>	<p>We will continue to consider the impact of these changes on children's rights and wellbeing including by engaging with relevant stakeholders and will publish further child rights and wellbeing impact assessments as is best practice.</p>
