# The wider benefits of higher education 

## Appendix 2 Multivariate analysis results

## Report by the Institute of Education, University of London, sponsored by the HEFCE and the Smith Institute

## Notes:

Model 1 gives the estimates without controls.
Model 2 gives the estimates with controls for family background.
Model 3 gives the estimates with controls for family background and occupational experience.
$\mathrm{P}=$ significance level, i.e. probability of a chance result

Table 3.1.1a: Men - Logistic regression equations for the likelihood of professional/managerial employment (those in employment only)
